KHK ALL PRODUCT GUIDE

KOHARA GEAR INDUSTRY CO., LTD.

Renewed for greater ease of selection

Greetings

Thank you for using KHK gear products.
We appreciate your patronage.
We have issued the Stock Gear Master Catalog "KHK2023".
Most recently, we have introduced new products with fastening modification. The J Series, offering ground spiral miter gears and miters, is available for immediate use.
Make use of our new catalog for easy selection.
KHK's mission is to offer quality products that build Customer Trust and Satisfaction.
We look forward to serving you.

Kohara Gear Industry Co.,Ltd.
Toshiharu Kohara, President

Index

How to use the catalog

Product Index (Pages 6 to 9)

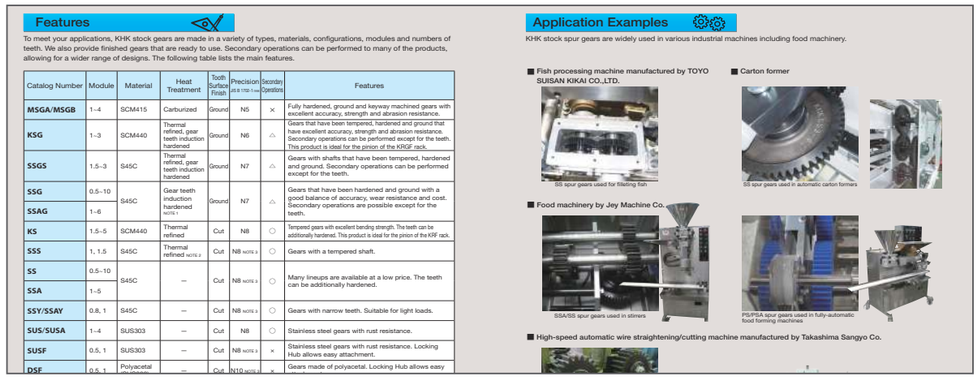
You can search for your desired gears by looking at product photos for each gear type.
It also includes an overview of product specifications such as gear accuracy and material and heat treatment.

Spur Gears

Racks

Product Technical Information

Technical Information is available for each gear type.
This documentation is essential for using the gears properly, including features of various products, examples of use and precautions on selection.



Features

To meet your applications, KHK stock gears are made in a variety of types, materials, configurations, modules and numbers of teeth. We also provide finished gears that are ready to use. Secondary operations can be performed to many of the products, allowing for a wider range of designs. The following table lists the main features.

Catalog Number	Module	Material	Heat Treatment	Tooth Surface Finish	Precision JIS B 1702-1:1998	Secondary Operations	Features
MSGA/MSGB	1–4	SCM415	Carburized	Ground	N5	×	Fully hardened, ground and keyway machined gears with excellent accuracy, strength and abrasion resistance.
KSG	1–3	SCM440	Thermal refined, gear teeth induction hardened	Ground	N6	△	Gears that have been tempered, hardened and ground that have excellent accuracy, strength and abrasion resistance. Secondary operations can be performed except for the teeth. This product is ideal for the pinion of the KRGF rack.
SSGS	1.5–3	S45C	Thermal refined, gear teeth induction hardened	Ground	N7	△	Gears with shafts that have been tempered, hardened and ground. Secondary operations can be performed except for the teeth.
SSG	0.5–10	S45C	Gear teeth induction hardened NOTE 1	Ground	N7	△	Gears that have been hardened and ground with a good balance of accuracy, wear resistance and cost. Secondary operations are possible except for the teeth.
SSAG	1–6						
KS	1.5–5	SCM440	Thermal refined	Cut	N8	○	Tempered gears with excellent bending strength. The teeth can be additionally hardened. This product is ideal for the pinion of the KRF rack.
SSS	1, 1.5	S45C	Thermal refined NOTE 2	Cut	N8 NOTE 3	○	Gears with a tempered shaft.
SS	0.5–10	S45C	—	Cut	N8 NOTE 3	○	Many lineups are available at a low price. The teeth can be additionally hardened.
SSA	1–5						
SSY/SSAY	0.8, 1	S45C	—	Cut	N8 NOTE 3	○	Gears with narrow teeth. Suitable for light loads.
SUS/SUSA	1–4	SUS303	—	Cut	N8	○	Stainless steel gears with rust resistance.
SUSF	0.5, 1	SUS303	—	Cut	N8 NOTE 3	×	Stainless steel gears with rust resistance. Locking Hub allows easy attachment.
DSF	0.5, 1	Polyacetal (SUS303)	—	Cut	N10 NOTE 3	×	Gears made of polyacetal. Locking Hub allows easy

Application Examples

KHK stock spur gears are widely used in various industrial machines including food machinery.

■ Fish processing machine manufactured by TOYO SUISAN KIKAI CO.,LTD.

SS spur gears used for filleting fish

■ Carton former

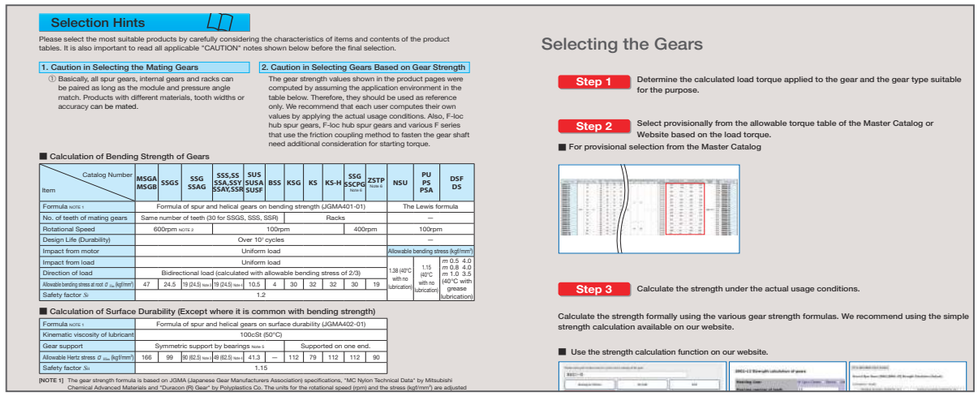
SS spur gears used in automatic carton formers

■ Food machinery by Jey Machine Co.

SSA/SS spur gears used in stirrers

PS/PSA spur gears used in fully-automatic food forming machines

■ High-speed automatic wire straightening/cutting machine manufactured by Takashima Sangyo Co.



Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable "CAUTION" notes shown below before the final selection.

1. Caution in Selecting the Mating Gears

① Basically, all spur gears, internal gears and racks can be paired as long as the module and pressure angle match. Products with different materials, tooth widths or accuracy can be mated.

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions. Also, F-loc hub spur gears, F-loc hub spur gears and various F series that use the friction coupling method to fasten the gear shaft need additional consideration for starting torque.

■ Calculation of Bending Strength of Gears

Item \ Catalog Number	MSGA MSGB	SSGS	SSG SSAG	SSS,SS SSA,SSY SSAY,SSR	SUS SUSA SUSF	BSS	KSG	KS	KS-H	SSG KSCPG NOTE 6	ZSTP NOTE 6	NSU	PU PS PSA	DSF DS
Formula NOTE 1	Formula of spur and helical gears on bending strength (JGMA401-01)											The Lewis formula		
No. of teeth of mating gears	Same number of teeth (30 for SSGS, SSS, SSR)					Racks						—		
Rotational Speed	600rpm NOTE 2					100rpm					400rpm	100rpm		
Design Life (Durability)	Over 10^7 cycles											—		
Impact from motor	Uniform load											Allowable bending stress (kgf/mm²)		
Impact from load	Uniform load													
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)											1.38 (40°C with no lubrication)	1.15 (40°C with no lubrication)	m 0.5 4.0 m 0.8 4.0 m 1.0 3.5 (40°C with grease lubrication)
Allowable bending stress at root σ_{Flim} (kgf/mm²)	47	24.5	19 (24.5) NOTE 4	19 (24.5) NOTE 4	10.5	4	30	32	32	30	19			
Safety factor S_F	1.2													

■ Calculation of Surface Durability (Except where it is common with bending strength)

Formula NOTE 1	Formula of spur and helical gears on surface durability (JGMA402-01)										
Kinematic viscosity of lubricant	100cSt (50°C)										
Gear support	Symmetric support by bearings Note 5					Supported on one end.					
Allowable Hertz stress σ_{Hlim} (kgf/mm²)	166	99	80 (62.5) NOTE 4	49 (62.5) NOTE 4	41.3	—	112	79	112	112	90
Safety factor S_H	1.15										

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications, "MC Nylon Technical Data" by Mitsubishi Chemical Advanced Materials and "Duracon (R) Gear" by Polyplastics Co. The units for the rotational speed (rpm) and the stress (kgf/mm²) are adjusted

Selecting the Gears

Step 1 Determine the calculated load torque applied to the gear and the gear type suitable for the purpose.

Step 2 Select provisionally from the allowable torque table of the Master Catalog or Website based on the load torque.

■ For provisional selection from the Master Catalog

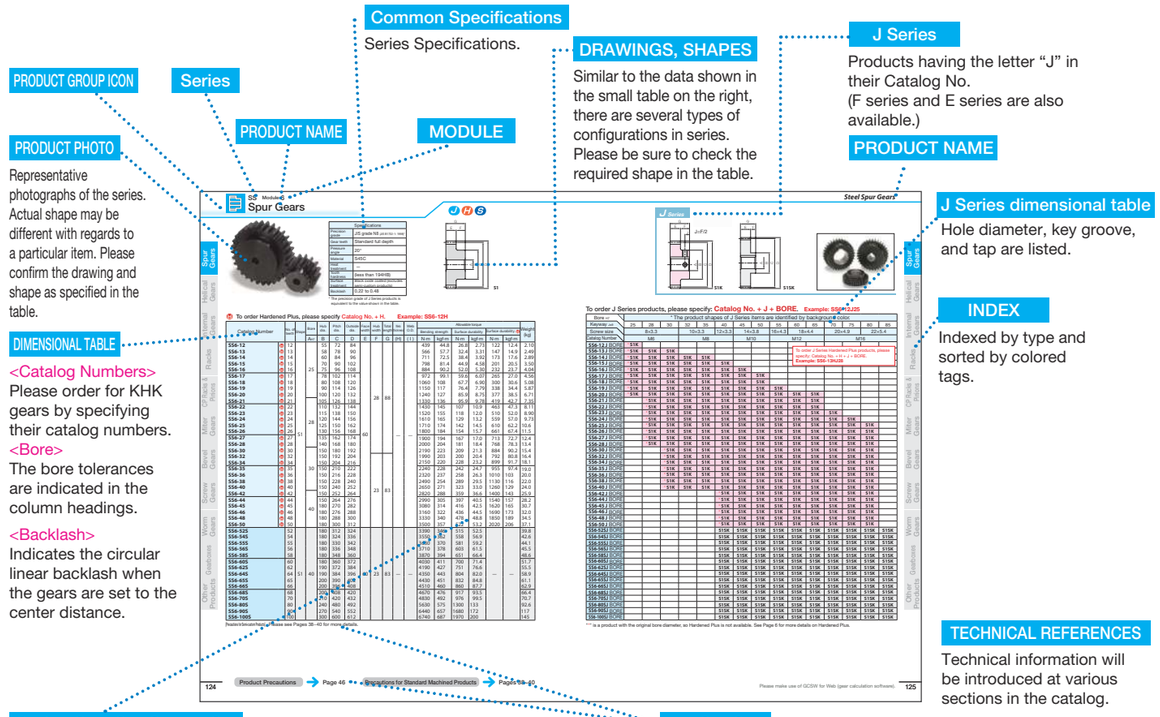
Step 3 Calculate the strength under the actual usage conditions.

Calculate the strength formally using the various gear strength formulas. We recommend using the simple strength calculation available on our website.

■ Use the strength calculation function on our website.

Dimensional Table Pages

Dimensional tables show the product specifications and performance for each gear type at a glance.
Compare the accuracy and strength, and select the appropriate gears while looking at the product photographs.



Selection Hints

When selecting KHK standard gears, glance over the Cautions on Product Characteristics and Cautions on Performing Secondary Operations in the product technical information and respective dimensional tables.

- Products not listed in this catalog or materials, modules, number of teeth and the like not listed in the dimensional tables can be manufactured as custom items. Please see Page 26 for more details about custom-made orders.
- The color and shape of the product images listed on the dimension table page of each product may differ from the actual product.
  Be sure to confirm the shape in the dimension table before selection.

- The details (specifications, dimensions, etc.) listed in the catalog may be changed without prior notice.
- All details recorded in this catalog are copyrighted. Replication without permission is strictly prohibited.
- Changes and corrections to the contents of the catalog are announced on the KHK website.

KHK Stock Gears

-Anytime, Anywhere, Ready to Use-

We respond immediately to customer needs with an abundant variety of 200 styles and 30,000 configurations.
As these items are always in stock, they can be used anytime, anywhere, when needed.

Abundant variety of gears

Spur Gears — P35 to
Helical Gears — P189 to
Internal Gears — P207 to
Racks — P213 to
Gearboxes — P441 to
Miter Gears — P299 to
Bevel Gears — P331 to

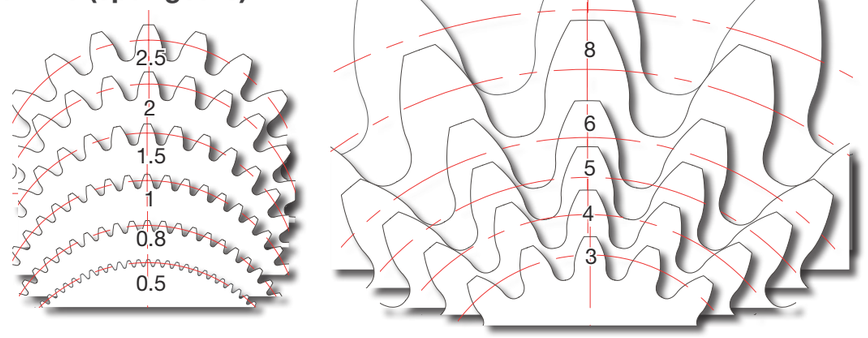
Worm Gears — P383 to
Other Products — P457 to

Large variety of sizes and numbers of teeth

Lineup from m0.5 to m10 (spur gears)

m	Minimum No. of teeth	Maximum No. of teeth
0.5	12	120
0.8	12	56
1	10	200
1.5	10	200
2	10	200
2.5	10	200
3	10	160
4	12	120
5	12	120
6	12	100
8	12	60
10	15	50



Full-scale drawing of teeth (spur gear)

Available in many materials

Choose based on your application.
We have a wide variety of standardized stainless steel and plastic products that can be used in places where rust and oil must be avoided, as well as metal products with increased gear strength.

Abundant inventory

We stock 5,000 configurations of product at all times in order to deliver them to you quickly.

KHK STOCK GEARS® Stock Gear Fastening Series

Key and screw fastening have been standardized.

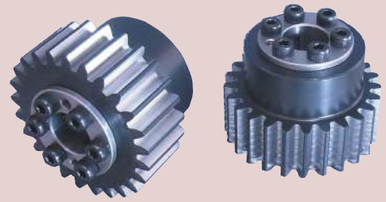
J Series

If you require finished bore gears with keyways and tapped holes, please order the J Series products. Product bore size, keyway dimensions and tap sizes have all been standardized.

Gears can be installed in flexible positions. Gear teeth can be easily aligned.

F Series

To install using locking hub parts, select from the F and E series to place your order. Locking Hub and bore sizes have been standardized.



Fits perfectly as the speed reducer pinion for servomotor.

R Series

If you require a flange type reducer pinion, please order R Series.
These products have standardized mounting hole specifications for flange.

Can be easily installed in 19 seconds using a single bolt

E Series

To install using locking hub parts, select from the F and E series to place your order.
These products are standardized high-precision ground spur gears with hydro-fastening.

The J Series have keyways, the F & E Series have locking hubs, and the R Series have holes for Speed reducers. These 81 styles contain 19,000 configurations of gears that can be used immediately due to their standardized bore and keyway sizes.

ETP-E Plus & KHK STOCK GEARS Standard Product

ETP-EXPRESS®

Definitively shortens the installation time

Bushing Fastening.

E Series

The lead time is **2** business days

Can be easily installed in 19 seconds using a single bolt

Time to mount a gear is reduced to 1/15

Concentricity: 0.02 mm

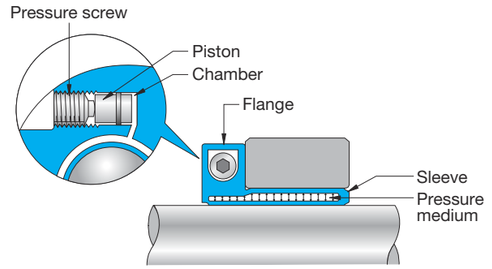
Solves the problems of gear fastening.

- Desire to reduce the time to mount gears.
  When using the conventional wedge method, mounting a gear takes about 5 minutes (according to research by KHK), whereas these products can be easily mounted using one bolt in 19 seconds.
- Desire to reduce the assembly runout of the gears.
- Desire to reduce the backlash between the gear and shaft.
- Desire to lower the decrease in shaft strength due to fretting wear (worn or seized shaft).
- Desire to simplify the phase matching and positioning.

MIKI PULLEY × KHK

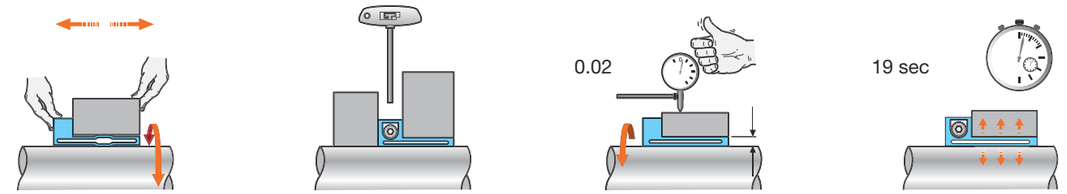
How the ETP-E Plus works

The pressure medium in the chamber is compressed as a result of tightening the screw.
The resulting pressure causes the hub side to expand into the hub and the bore side to expand onto the shaft. Thus allowing the shaft and the hub to be securely fastened.



Effects of ETP-E Plus

Easy and accurate positioning	Helps save space	High concentricity	Secure and speedy installation



KHK Lineup

6 styles, 2,400 configurations

See Page 82

SSG Ground Spur Gears Series

Precision: N7
Material: S45C
Heat Treatment: Gear teeth induction hardened
1000 configurations

m1.5 to 6

Limited release on the Japanese website

KHG Ground Helical Series

Precision: N6
Material: SCM440
Heat Treatment: Thermal refined / gear teeth induction hardened
500 configurations

m1.5 to 3

AGF Worms & Wheels Series

Precision: KHK 2
Material: CAC702 (A ℓ BC2)
230 configurations

m2 to 6

- ZSTP 2 to 6, 110 configurations
- AGDL 1.5 to 4, 180 configurations
- AG 1.5 to 6, 330 configurations

- Allowable Order Sizes
  1 to 20 units. For quantities over 20, please request price and delivery quotes.
- Ordering Method
  Catalog Number + E + Bore Size (Example: SSG2-25E + BORE)
- Production is completed in 2 working days excluding the day ordered.
  As available-on-request products, these require a lead-time for shipping of 2 working days (excludes the day ordered), after placing an order.
  Products with module 4 (CP15) or higher require a lead-time for shipping within 7 working days from the order (excludes the day ordered).

Positive lock is also available at KHK Quick-Mod Gears.

Induction Hardening Service

SN Hardened Screw Gears added to the lineup

J Series Now Supported

焼入＋プラス

Hardened Plus

Hardening is provided as an additional service to standard products when ordered. Products with (H) at the end of the Catalog No. support Hardened Plus.

Quick delivery, hardening completed in 4 working days

Induction hardening specification

Area: Tooth surface hardened

Hardness: HRC50 to 60

● Hardness and depth of gear-teeth induction hardening

The hardening method and the state of the hardened teeth area vary depending on the size of gears.
Note that hardening specifications of Hardening Plus above will be near the standard pitch diameter of the gear.

Note: The gear precision decreases after hardening.
The bore dimension tolerance H7 will also be degraded.

For Hardened Plus, the hardening unit price below is added to the product unit price.

■ Hardening unit price of SS, SSA and SSCP spur gears (S45C products)

No. of teeth	Module (Circular Pitch)							
	1	1.5	2	2.5	3	4	5	6
	(CP2.5)	(CP5)	-	-	(CP10)	-	(CP15)	(CP20)

SS/SSA/SSCP Spur Gears

KS/KSSCP Thermal Refined Spur Gears

NEW SN Screw Gears

Ordering Method and Delivery Date

• Standard Product

Please specify: **Catalog No. + H.**

Example: Catalog No.: SS3-30, when hardening is added ⇒ SS3-30H

Production is completed by the manufacturer in 4 working days **excluding the day ordered**

• J Series

Please specify: **Catalog No. + H + J + BORE.**

Example: Catalog No.: SS4-15, when hardening is added ⇒ SS4-15HJ25

m1 to 3 Production is completed by the manufacturer in 6 working days **excluding the day ordered**

m4 up Production is completed by the manufacturer in 11 working days **excluding the day ordered**

Precautions

① Because machining starts immediately, we cannot accept cancellations.
② The bore diameter distorts due to hardening.
③ Black oxide treatment cannot be performed after hardening.
④ The surface durability values shown in the table are calculated values according to the assumed usage conditions. Please calculate the actual surface durability in the KHK website.

KHK Quick-Mod Gears

KHK 歯車工房
信頼の追加工

↑ Delivered with this marking

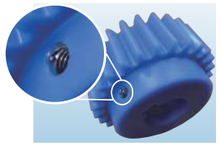
Trusted secondary operations
guaranteed by KHK

KHK Quick-Mod Gears is a KHK original custom system which modifies standard gears according to customers' requirements and delivers them as finished products.

Three benefits of using the KHK Quick-Mod Gears

Wide range of secondary operations

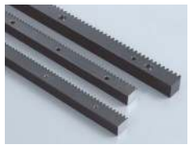
We accept various machining including bore and mounting hole machining, Helisert machining, stepped hole machining and hub removal.



Helisert Processing

Stepped Hole Machining

Holes, Hubs, Keyway Machining



Various Mounting Hole Machining

Fast delivery available

We use high-precision machines to quickly machine in-stock "stock gears" on the JIT production line and deliver them with a short turnaround.

Warehouse of KHK Stock Gears

Inspection and Packaging

Shipping

Surface Treatments Offered

We accept requests for various types of plating. We offer platings that are suitable for rust prevention, solid lubrication for wear resistance and various other surface treatments.

■ Electro-galvanizing

A typical plating method for the purpose of preventing rust on iron, with plating thickness of about 2 to 25 μm.

■ Black chromate

Black or slightly reddish plating.
Black trivalent chromate is RoHS compliant.

■ Black oxide

Chemical change due to a strongly alkaline treatment liquid forms a ferrosoferric oxide film (3 μm or less).

■ Phosphate treatment

An iron phosphate chemical conversion treatment that forms a thin iron amorphous film.

■ Unichromate

A bluish silver-white plating.
Trivalent chromate is RoHS compliant.

■ Electroless nickel plating

Plating with thickness of 3 to 10 μm with uniform film thickness.

■ Low-temperature black chrome plating

A black chromium film (1 to 2 μm) unlikely to peel away.

Note: Keep in mind that the product size of surface treatment with thick plating is the size before plating.

When Placing Orders

For quotation of secondary operations on standard products (KHK Quick-Mod Gears), please prepare a drawing with desired specifications. We will manufacture to the drawing after discussing prices and lead times.

<Cautions regarding Manufacturing>

- Please note that we do not perform black oxide processing after additional machining.
- Gear precision may be reduced, depending on the additional machining specifications.
  Please contact us when requesting a quote for information about post-machining gear precision.

Please include a drawing with your request.

Use the Drawing Creation Tool from the Website to create drawings for your quotation.

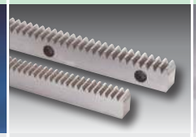
Custom Gears

KHK has perfected its reception system for made-to-order gears, through unique know-how developed over many years regarding non-standard gear products, modifying technology, and the latest production system.

Machining Range

Spur/Helical Gears	Racks	Internal Gears	Screw Gears	Miter/Bevel Gears	Worm Gears
					


Module 0.5~10 Outer diameter ϕ500 mm or less Weight 200 kg or less	Module 0.5~16 Total length 2,000mm or less Weight 60kg or less	Module 0.5~4 Tooth diameter ϕ150mm or more Outer diameter ϕ500 mm or less Weight 40kg or less	Module 1~4 Outer diameter ϕ600 mm or less Weight 200 kg or less	Module 1~10 Outer diameter ϕ250 mm or less Mounting distance 170 mm or less Weight 50kg or less	Module 0.5~10 Worm outer diameter: ϕ100 mm or less Wheel outer diameter: ϕ600 mm or less Mounting distance 350mm or less

Remarks	Teeth Wire Cut

When Placing Orders

Please prepare your own drawings.

Quotations for made-to-print gears are limited to the "production range" above. When ordering, please prepare a drawing with the details of the "Items described in the product specifications" clearly stated. We will manufacture to the drawing after quoting cost and lead time.

<Cautions regarding Manufacturing>

- Even if an order is within the manufacturing range, it may not be manufacturable depending on the specifications such as accuracy, shape and heat treatment.
- Gears for which we have the technological capacity may be unavailable due to the circumstances of our production processes and capabilities.
- We may provide a quotation with the customer's accuracy requirements changed according to our manufacturing capacity. Please check your quotation before placing an order.
- Designs with no product specifications listed on the drawing, or details of quality requirements, will be manufactured based on the ISO9001 quality system.
- We do not conduct any design work for custom ordered gears. We manufacture only to customer drawings.

■ Items described in the product specifications ● Requirement ○ As required △ Contact us – Not required

If prior discussion is not possible, they will be detailed in the quotation.

J Series supported

Semi-Custom Stock Gears

Standardized Coarse Pitch gears now in the Catalog

Streamlining design and selection to shorten lead times

Semi-custom standard products

- **No effort spent on design**
  Simply select the gears you need from the catalog, eliminating design costs.
- **Fast delivery available**
  Products are delivered with short lead times via our consistent production system.
- **Reliable quality**
  The mark of trust "KHK" guarantees the quality of products listed in the catalog.

◆ Supported Products ◆

SSG Ground Spur Gears J

m4/5/6/8/10 / No. of Teeth 20 to 120

SS Spur Gears J

m4/5/6/8/10 / No. of Teeth 26 to 120

◆ Ordering Method ◆

- Semi-Custom Standard Product
  Example: SS5-80S
- Semi-Custom Standard Product J Series:
  Catalog No. + J + BORE
  Example: SS5-80SJ40

◆ Delivery Date ◆

- Semi-Custom Standard Product
  SS Spur Gears:
  About 15 business days after the order is received
  SSG Ground Spur Gears:
  About 30 business days after the order is received
- Semi-Custom Standard Product J Series
  SS Spur Gears:
  About 25 business days after the order is received
  SSG Ground Spur Gears:
  About 40 business days after the order is received

● Non-standard secondary operations are available at "KHK Quick-Mod Gears"
If there are no standards for the semi-custom J Series, the order will be machined separately according to the specifications.

*Semi-custom standard products are made to order based on catalog products. The price and delivery date will be discussed separately.

Racks & Pinions Aluminum Frame Transport Device

SUS × KHK

With design support. Easy installation. Labor-saving.

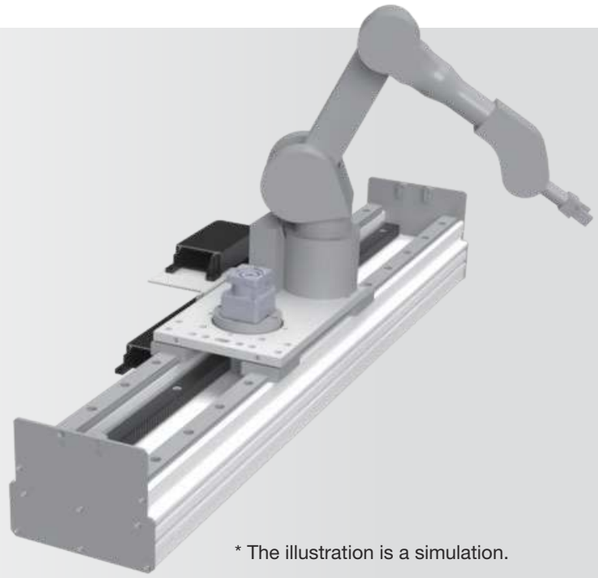
High-speed transfer up to the maximum stroke of 3800 mm.

Transport Device Example

RU-800-H

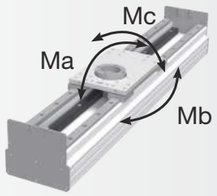
Maximum Payload (Horizontal)	60 kg (reduction ratio: 1/5*)
Stroke	800mm
Repeated Positioning Accuracy	±0.3mm
Max. Speed	1,000 mm/sec
Total Length	1218mm

* Mitsubishi HG-KR43 (400W), acceleration of 0.3G, during operation



* The illustration is a simulation.

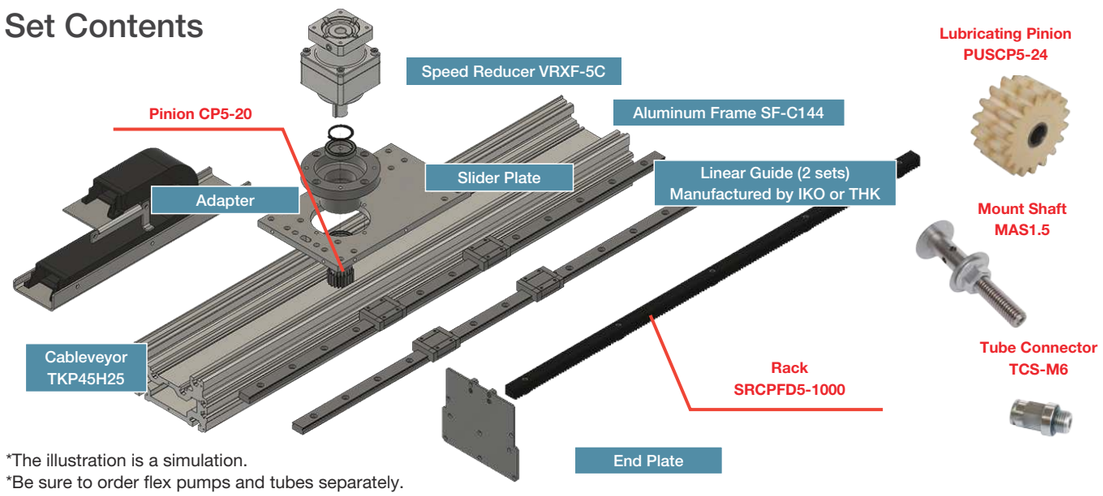
Static Allowable Moment Ma 2107Nm
Static Allowable Moment Mb 2107Nm
Static Allowable Moment Mc 2340Nm
Total Length 1218mm
Frame Length 1200mm



Reduction ratio	Max. Speed (mm/sec)	Max. Payload (kg)
1/3	1666	15
1/5	1000	60

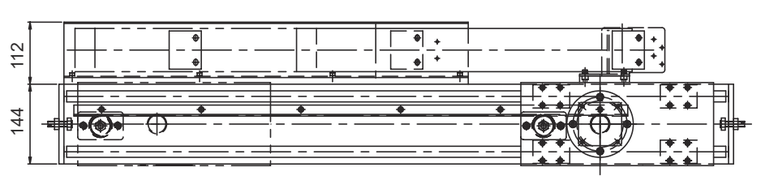
* Robots, motors, controllers, etc. are not included.

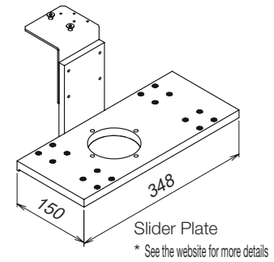
Set Contents

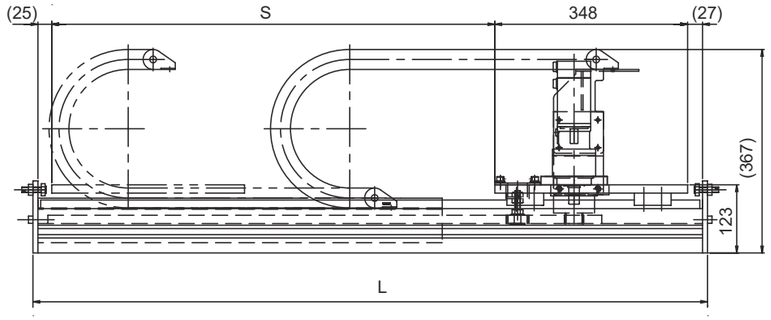


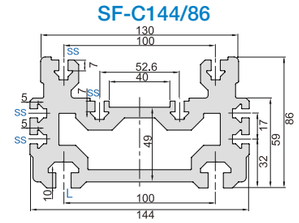
*The illustration is a simulation.
*Be sure to order flex pumps and tubes separately.

■ Product Features
① The maximum stroke can be freely set within 3800 mm.
② Capable of transporting a wide range of light to heavy objects
③ Delivery time for the transport device in the example is 30 business days (discussion required when changing specifications)







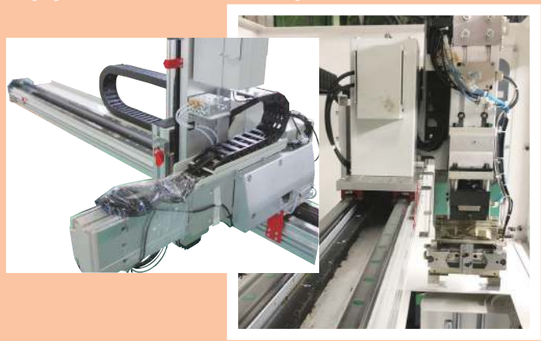


■ Standard specifications

Model	Stroke: S (mm)	Total length: L (mm)
RU-800- □	800	1218
RU-1300- □	1300	1718
RU-1800- □	1800	2218
RU-3800- □	3800	4218

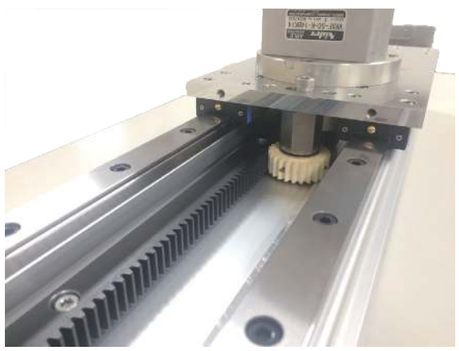
* Can be manufactured within the stroke range of 500 mm to 3,800 mm. The length is adjusted in 100 mm increments.
* □ contains "S" for reduction ratio of 1/3, and "H" for reduction ratio of 1/5.

Application Examples



* Image courtesy of Hasegawa Machine Works, Ltd.

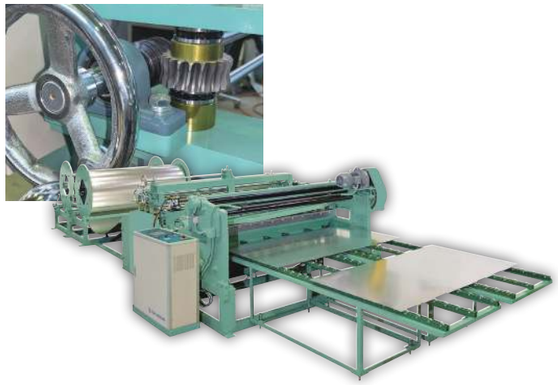
Standard equipment includes lubricating pinion



Case Study 1

FUKAGAWA 株式会社深川製作所様

Automatic Size Cutting Device NAHC-F10



Gears Used
Uses SW worms and CG worm wheels for rib roll feeding

Machine Application
This device provides materials while correcting the bending of coiled material.

Features
Cn automatically perform standard-length straight pipes cutting, stain removal and ribbing simply by entering the duct size

3-Roll for Square Elbow FBR-2000M

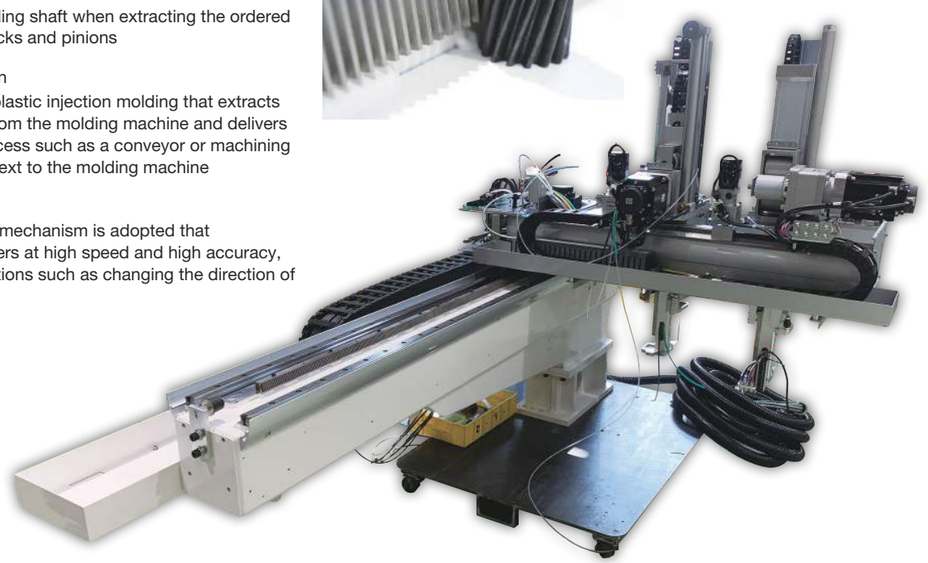
Gears Used
Uses SMA miter gears for bending moving steel plates

Machine Application
A square elbow forming machine that rolls and bends three iron plates

Features
It has a repeat function that sets the forming roll in the same position

SAILOR セーラー万年筆株式会社様

Injection Molded Product Automatic Extractor sigma5



Gears Used
Used for the traveling shaft when extracting the ordered (custom-made) racks and pinions

Machine Application
A device used in plastic injection molding that extracts molded products from the molding machine and delivers them to a post-process such as a conveyor or machining machine installed next to the molding machine

Features
A rack and pinion mechanism is adopted that extracts and delivers at high speed and high accuracy, enabling modifications such as changing the direction of extraction.

株式会社トパック 様

Ultra-high-speed Three-way Seal Bag Filling and Packaging Machine R

Gears Used
MM, SM and SMB miters change the motion from the horizontal-shaft drive to the vertical-shaft drive, which is then transmitted to the filling device, and combined with SW worms and CG worm wheels to be used for adjusting the timing of filling while operating the filling device

Machine Application
Makes and fills bags at ultra-high speeds of 300 to 800 bags per minute
· A top-level automatic filling and packaging machine

Features
Ultra-high-speed filling and packaging is achieved by the use of rotary methods that make, fill and seal bags in the horizontal direction. In addition, the filling time can be extended to reduce the occurrence of biting into the seal, and the sealing time can be extended to achieving stable seal strength. Also, by combining with an integration device, the unit can be connected to carton making machines, horizontal pillow machines, banding machines, bag-feeding packaging machines, etc.

MARUHIDE 株式会社丸秀工機様

Pipe Coaster HID-400MA,600MA, 1000MA,1500MA

Gears Used
Uses custom made-to-order racks and pinions made in the KHK Quick-Mod Gears (standard product given secondary operations) for the running shaft when cutting

Machine Application
Dimensional cutting, shape cutting (branch cutting / hole cutting), groove cutting and marking of pipes and steel pipe members used in industries such as shipbuilding, pressure vessels, water supply and sewage, steel structures, construction machinery and heavy electric machinery

Features
· Supports small-diameter pipes down to 25A to large-diameter pipes up to 1500A.
· Can be use to cut not only steel pipes but also square steel pipes and other materials.
· Supports various cut shapes and has a groove which enables speedy and highly accurate cutting.
· Facilitates data creation with the adoption of an interactive data input system.

Case Study 2

株式会社 ハタリー 様

Short Column Groove Machining Machine SCB-1000Ⅱ

Gears Used
Uses SS Series within machining drive

Machine Application
Short column material, groove machining on both ends

Features
· Machining speed is the fastest in the industry
· Significantly simplifies the setup
· Supports corners of 250 to 1000 mm and a maximum plate thickness of 50 mm

H-section Steel Groove Machining Machine HQB-1055NL

Gears Used
Uses SWG worms and AG worm wheels in machining drive gearboxes

Machine Application
Secondary operations of H-section steel grooves, scallops and driving

Features
· Supports non-scallop machining
· Automated 3 shafts
· High-rigidity frame
· Reliable long-run model

株式会社トーキン 様（広島県呉市）

Robot Slider RS1S

Gears Used
SRCPF racks and custom-order CP spur gears are used for the traveling shaft

Machine Application
As a traveling device for various robots

Features
· Can be extended by 1.2m by combining 3 types of frames
· Allows additional extension to be made to existing devices
· Achieved the maximum track record of 40.8 m

不二産業株式会社様

Lifter for switchboard

Gears Used
Use custom-made spur gears to raise and lower the lifter

Machine Application
Pulls out and stores devices such as circuit breakers and lightning arresters from the switchboard.

Features
Allows raising and lowering heavy luggage with human power.

増幸産業株式会社様

Super Mass-Colloider MKZA10-15JIV

Gears Used
Use custom-made spline shafts and spline hubs for the attrition shaft, and SB bevel gears for the manual grinding shaft

Machine Application
Food, spices, industrial raw materials, pharmaceuticals, cosmetics, etc.

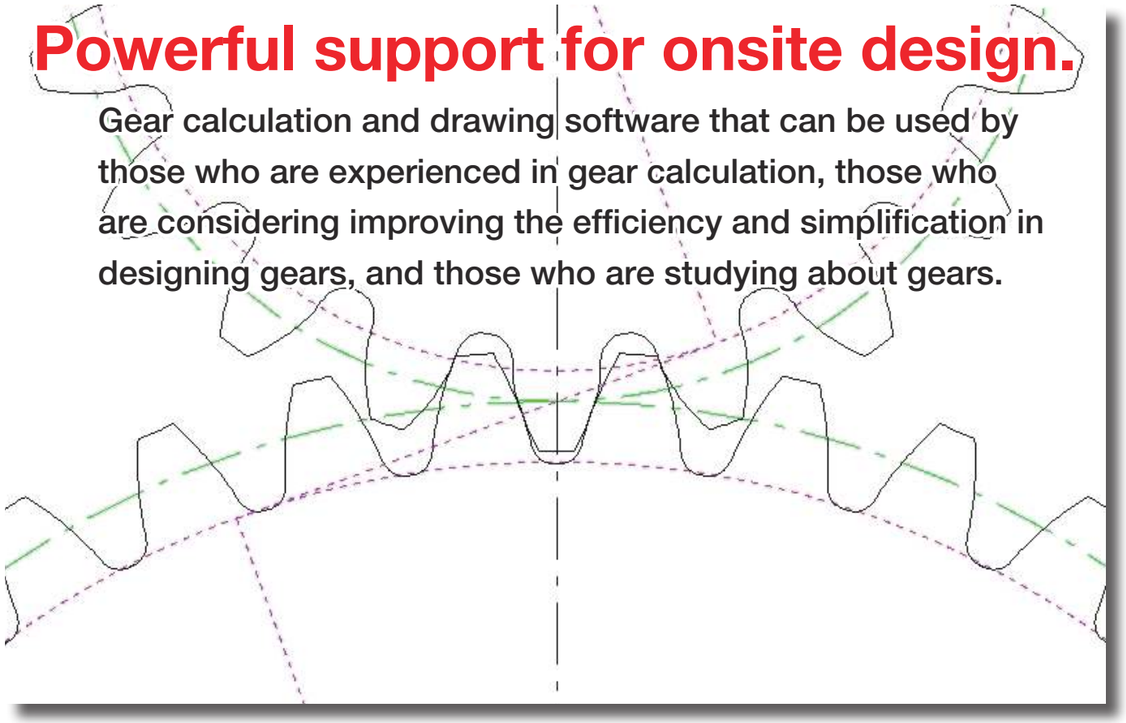
Features
Ultra-fine grain grinder. A stone mill type grinder that's capable of ultra-fine granulation that feels like melting.

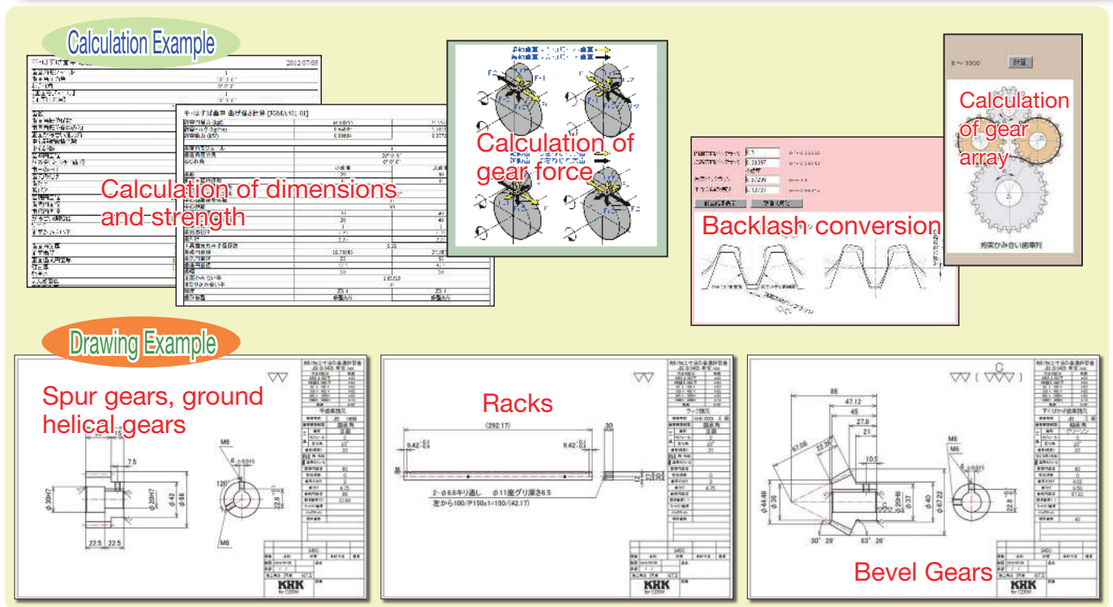
Gear calculation software GCSW Free

& Gear drawing software GDSW for Web

Powerful support for onsite design.

Gear calculation and drawing software that can be used by those who are experienced in gear calculation, those who are considering improving the efficiency and simplification in designing gears, and those who are studying about gears.





Gear calculation software GCSW

Reduce the cost of designing gears with GCSW.

Calculation functions of GCSW	
Gear Type	Parallel axes: Spur/helical gears, internal gears, racks & pinions Intersecting axes: Miters, bevel gears Skewed axes: Screw gears, worms & wheels
Calculation details	Various dimensional calculations (profile shift, tooth thickness, center distance) Strength calculation (bending strength, surface strength) Calculation of gear force (radial direction, thrust direction, radial direction) Gear tooth profile calculation (tooth profile drawing, creation drawing, meshing drawing) Backlash conversion, constraint meshing gear array calculation
Output Details	Printing various calculation results Printing tooth profile drawing, creation drawing and meshing drawing CAD data output of tooth profile drawing

Difficult calculations for gears such as gear shape, strength and tooth profile can be instantly made.
In addition, it can simulate the dimensions and strength of desired gears, allowing the designing cost to be drastically reduced.

Gear drawing software GDSW

Basic gear drawings can be easily made using GDSW.

GDSW drawing functions	
Gear Type	Parallel axes: Spur/helical gears, internal gears, racks & pinions Intersecting axes: Miters, bevel gears Skewed axes: Screw gears, worms & wheels
Drawing contents	Gear specifications (pitch, pressure angle, number of teeth, gear accuracy, material, heat treatment, etc.) Basic shape of various gears Shapes with/without hubs (2-step hub supported) Hole shape (3-step hole supported) Key groove shape (JIS key, optional key supported) Mounting hole shape (tap, drilled hole, counterbored hole)
Output Details	Printing gear drawings CAD data output of drawn gears (ZIP supported)

It can be used to make drawings with basic gear shapes without needing CAD software.
Drawings of spur gears, bevel gears, worm gears and the like can be printed and CAD data can be created.

Usage

Please register as a user.

KHK software can be used for free, but registration is required.
When user registration is completed, "KHK My Page" is created and GCSW and GDSW become available.
For details, please see our web site.

* We carefully manage customer data based on our personal information protection policy

KHK gear calculator Search

<Cautions regarding Manufacturing>

- Software contents and terms of use are subject to change without notice.
- No compensation will be provided for any loss which might be caused by bugs in the software.
- The gear strength formula of GCSW is based on JGMA (Japanese Gear Manufacturers Association) specifications.
- Drawings drawn by GDSW may not be manufacturable due to our production capacity.

Product Delivery

Delivery Date Guide

Product Name \ Shipping Date	4 days later	6 days later	9 days later	17 days later	30 days later	40 days later
J Series	Order Date → 2 Business Days → Product complete / Shipping Date	Number of products 20 units

Semi-Custom J Series SSG	Order Date → About 40 Business Days → Product complete / Number of products 5 units / Shipping Date					

*The delivery date excludes the day ordered, and shipping takes place on the next business day. Because machining starts immediately, we cannot accept cancellations for the products above.

*Note 1 Allowable order sizes for module 4 (CP15) or higher are up to 5 units; for racks, SUS, SN, MMSG, SMSG, and MMSGQ products of module 4 or higher, up to 20 units.

Series Common

(1) For allowable order sizes, see the Delivery Date Guide on the lefthand page. Cancellation is not possible for made-to-order products.
Please allow additional shipping time to get to your local distributor.

J Series

[J Series lead time]
(1) As available-on-request products, these require a lead-time for shipping of 2 working days (excludes the day ordered), after placing an order.
(2) Products with module 4 (CP15) or higher require a lead-time for shipping within 7 working days (excludes the day ordered).
(3) Racks, regardless of module, require a lead-time for shipping within 2 working days (excludes the day ordered).
(4) MMSGQ J Series, regardless of module, require a lead-time for shipping within 7 working days (excludes the day ordered).

F Series

[F Series lead time]
(1) As available-on-request products, these require a lead-time for shipping of 2 working days (excludes the day ordered), after placing an order.

E Series

[E Series lead time]
(1) As available-on-request products, these require a lead-time for shipping of 2 working days (excludes the day ordered), after placing an order.
(2) Products with module 4 or higher require a lead-time for shipping within 7 working days (excludes the day ordered).

R Series

[R Series lead time]
(1) As available-on-request products, these require a lead-time for shipping of 2 working days (excludes the day ordered), after placing an order.

Hardened Plus (H Series)/Hardened Plus J Series (HJ Series)

[Hardened Plus (H Series) lead time]
(1) As available-on-request products, these require a lead-time for shipping of 4 working days (excludes the day ordered), after placing an order.
[Hardened Plus J Series (HJ Series) lead time]
(1) As available-on-request products, these require a lead-time for shipping of 6 working days (excludes the day ordered), after placing an order.
(2) Products with module 4 (CP15) or higher require a lead-time for shipping within 11 working days (excludes the day ordered).

Semi-custom order / Semi-custom order J series

[Semi-custom lead time]
(1) In the SS Series, products with S at the end of the Catalog No. are semi-custom stock products. The delivery will take about 15 business days after the order is received.
(2) In the SSG Series, products with S at the end of the Catalog No. are semi-custom stock products. The delivery will take about 30 business days after the order is received.
[Semi-custom J Series lead time]
(1) SS type semi-custom J series products take about 25 working days after the order is received.
(2) SSG type semi-custom J series products take about 40 working days after the order is received.

Prices/Changes/Cancellations/Out of Stock

Prices

① Made-to-order products, semi-custom orders, and semi-custom order J Series products are estimated separately. Contact your dealer.
② In addition, since the prices are per unit (excluding SRS), the total unit price of miters and the like is the set price.
③ Product prices may be changed without prior notice.

Changes and Cancellations

[Standard Machined Products *Note 1, Made to Order Products, Semi-custom Products, Semi-custom J Series Products]
Because production begins upon ordering, cancellations and changes cannot be made.

[KHK Quick-Mod Products, Custom Gears]
Because production begins upon ordering, cancellations and changes are difficult.
Changes may be possible in some cases, depending on modification status, but a further estimate will be required. Contact your dealer for details.
As the product is manufactured to customer-specified dimensions, it cannot be used elsewhere; therefore, returns are not possible.

Out of Stock

[Standard Gears (gears in stock), Standard Machined Products *Note 1, KHK Quick-Mod Gears]
Production takes place according to stock status, so there may not be sufficient quantities available as ordered.
Some time may be required for production after orders.
Lead times may be longer depending on material acquisition status and modification processes.

*Note 1 Standard machined products: J Series, F Series, R Series, E Series, Hardened Plus, Hardened Plus J Series

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Spur Gears

S S G 1 - 15

- 15: No. of Teeth (15)
- 1: Module (1)
- G: Other Products (Ground Gears)
- S: Type (Spur Gear)
- S: Material (S45C)

Material

M	SCM415
K	SCM440
S	S45C
SU	Stainless Steel
P	MC901
N	MC602ST
D	Polyacetal
BS	Brass
L	Sintered Metal Alloy

Type

S	Spur Gears

Other Information

A	Without Hub
G	Ground Gears
F	F-loc Hub Gears
R	Ring Gears
S	Pinion Shafts
U	Plastic Gears with Steel Core
Y	Thin Face Gears
H	Gear Teeth Induction Hardened

Features

To meet your applications, KHK stock gears are made in a variety of types, materials, configurations, modules and numbers of teeth. We also provide finished gears that are ready to use. Secondary operations can be performed to many of the products, allowing for a wider range of designs. The following table lists the main features.

Catalog Number	Module	Material	Heat Treatment	Tooth Surface Finish	Precision JIS B 1702-1:1998	Secondary Operations	Features
MSGA/MSGB	1~4	SCM415	Carburized	Ground	N5	×	Fully hardened, ground and keyway machined gears with excellent accuracy, strength and abrasion resistance.
KSG	1~3	SCM440	Thermal refined, gear teeth induction hardened	Ground	N6	△	Gears that have been tempered, hardened and ground that have excellent accuracy, strength and abrasion resistance. Secondary operations can be performed except for the teeth. This product is ideal for the pinion of the KRGF rack.
SSGS	1.5~3	S45C	Thermal refined, gear teeth induction hardened	Ground	N7	△	Gears with shafts that have been tempered, hardened and ground. Secondary operations can be performed except for the teeth.
SSG	0.5~10	S45C	Gear teeth induction hardened NOTE 1	Ground	N7	△	Gears that have been hardened and ground with a good balance of accuracy, wear resistance and cost. Secondary operations are possible except for the teeth.
SSAG	1~6						
KS	1.5~5	SCM440	Thermal refined	Cut	N8	○	Tempered gears with excellent bending strength. The teeth can be additionally hardened. This product is ideal for the pinion of the KRF rack.
SSS	1, 1.5	S45C	Thermal refined NOTE 2	Cut	N8 NOTE 3	○	Gears with a tempered shaft.
SS	0.5~10	S45C	—	Cut	N8 NOTE 3	○	Many lineups are available at a low price. The teeth can be additionally hardened.
SSA	1~5						
SSY/SSAY	0.8, 1	S45C	—	Cut	N8 NOTE 3	○	Gears with narrow teeth. Suitable for light loads.
SUS/SUSA	1~4	SUS303	—	Cut	N8	○	Stainless steel gears with rust resistance.
SUSF	0.5, 1	SUS303	—	Cut	N8 NOTE 3	×	Stainless steel gears with rust resistance. Locking Hub allows easy attachment.
DSF	0.5, 1	Polyacetal (SUS303)	—	Cut	N10 NOTE 3	×	Gears made of polyacetal. Locking Hub allows easy attachment.
NSU	1~3	MC602ST (S45C)	—	Cut	N9	○	Steel hubs are fused and fixed to reinforced nylon gears for secure fastening.
PU	1~2	MC901 (SUS303)	—	Cut	N9	○	Stainless steel hubs are fused and fixed to nylon gears for secure fastening.
PS/PSA	1~3	MC901	—	Cut	N9	○	Nylon gears can be used with no lubrication.
DS	0.5~1	Duracon (R) (M90-44) NOTE 4	—	Injection Molded	N12 equivalent	△	Low-priced gears made through injection molding. Suitable for light loads.
BSS	0.5~1	Free-cutting Brass (C3604)	—	Cut	N8 NOTE 3	○	Brass gears with excellent machinability.
SSR	2~3	S45C	—	Cut	N9	○	They have a ring shape with a large number of teeth.

○ Possible △ Partly possible × Not possible

[NOTE 1] Products with module under 1 are thermal refined. Gear teeth are not hardened.
[NOTE 2] SA-shaped products with module 1 have no material thermal refinement treatment.
[NOTE 3] The product accuracy class having a module under 1 corresponds to 'equivalent' as shown in the table.
[NOTE 4] "Duracon (R)" is a registered trademark of Polyplastics Co., Ltd. in Japan as well as other countries.

● **KHK stock spur gears (m1.5 and higher) have semi-topping on the tooth tips.**
● **Black products are KHK stock gears that have an applied black oxide coating for rust resistance.**

Application Examples

KHK stock spur gears are widely used in various industrial machines including food machinery.

■ **Fish processing machine manufactured by TOYO SUISAN KIKAI CO.,LTD.**

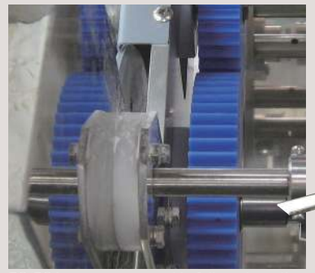
SS spur gears used for filleting fish

■ **Carton former**

SS spur gears used in automatic carton formers

■ **Food machinery by Jey Machine Co.**

SSA/SS spur gears used in stirrers



PS/PSA spur gears used in fully-automatic food forming machines

■ **High-speed automatic wire straightening/cutting machine manufactured by Takashima Sangyo Co.**

SS spur gears used for wire feeder

■ **Packing machine by New Max**

SS Spur Gears, segment shaped by secondary operation

■ **Electric wire winder by Sakuma Tekko KK.**

SS Spur Gears are used at the handgrip stopper

Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable "CAUTION" notes shown below before the final selection.

1. Caution in Selecting the Mating Gears

① Basically, all spur gears, internal gears and racks can be paired as long as the module and pressure angle match. Products with different materials, tooth widths or accuracy can be mated.

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions. Also, F-loc hub spur gears and various F series that use the friction coupling method to fasten the gear shaft need additional consideration for starting torque.

■ Calculation of Bending Strength of Gears

Item \ Catalog Number	MSGA MSGB	SSGS	SSG SSAG	SSS,SS SSA,SSY SSAY,SSR	SS-H	SUS SUSA SUSF	BSS	KSG	KS	KS-H	SSG SSCPG Note 6	ZSTP Note 6	NSU	PU PS PSA	DSF DS
Formula NOTE 1	Formula of spur and helical gears on bending strength (JGMA401-01)												The Lewis formula		
No. of teeth of mating gears	Same number of teeth (30 for SSGS, SSS, SSR)							Racks					—		
Rotational Speed	600rpm NOTE 2			100rpm							400rpm		100rpm		
Design Life (Durability)	Over 10^7 cycles												—		
Impact from motor	Uniform load												Allowable bending stress (kgf/mm²)		
Impact from load	Uniform load												1.38 (40°C with no lubrication)	1.15 (40°C with no lubrication)	*m* 0.5 4.0 *m* 0.8 4.0 *m* 1.0 3.5 (40°C with grease lubrication)
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)														
Allowable bending stress at root σ_{Flim} (kgf/mm²)	47	24.5	19 (24.5) Note 3	19 (24.5) Note 4	19	10.5	4	30	32	32	30	19			
Safety factor S_F	1.2														

■ Calculation of Surface Durability (Except where it is common with bending strength)

Formula NOTE 1	Formula of spur and helical gears on surface durability (JGMA402-01)												
Kinematic viscosity of lubricant	100cSt (50°C)												
Gear support	Symmetric support by bearings Note 5							Supported on one end.					
Allowable Hertz stress σ_{Hlim} (kgf/mm²)	166	99	90 (62.5) Note 3	49 (62.5) Note 4	90	41.3	—	112	79	112	112	90	
Safety factor S_H	1.15												

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications, "MC Nylon Technical Data" by Mitsubishi Chemical Advanced Materials and "Duracon (R) Gear" by Polyplastics Co. The units for the rotational speed (rpm) and the stress (kgf/mm²) are adjusted to the units needed in the formula.
[NOTE 2] For semi-custom gears, the rotation speed is based on 300rpm.
[NOTE 3] For SSG Ground Spur Gears, with module under 1, thermal refining is applied. Allowable bending stress and allowable hertz stress values are shown in parentheses.
[NOTE 4] For SSS Spur Pinion Shafts, with module over 1.5, tooth induction hardening is not applied. Allowable bending stress and allowable hertz stress values are shown in parentheses.
[NOTE 5] SSS Spur Pinion Shafts with module 1 or less (SA configuration) are set to cantilever support as they are single shaft types.
[NOTE 6] For Nabtesco GH Series.

When selecting KHK standard gears, glance over the Cautions on Product Characteristics and Cautions on Performing Secondary Operations on Page 46.

① Products not listed in this catalog or materials, modules, number of teeth and the like not listed in the dimensional tables can be manufactured as custom items. Please see Page 24 for more details.
② The color and shape of the product images listed on the dimension table page of each product may differ from the actual product.
Be sure to confirm the shape in the dimension table before selection.
③ The details (specifications, dimensions, etc.) listed in the catalog may be changed without prior notice. Changes are announced on the KHK website.

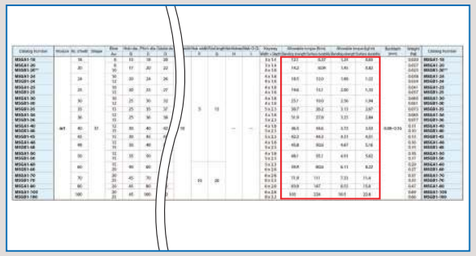
Website URL: https://khkgears.net/new/
Overseas Sales Department: Phone: +81-48-254-1744 Fax: +81-48-254-1765
E-mail: info@khkgears.net

Selecting the Gears

Step 1 Determine the calculated load torque applied to the gear and the gear type suitable for the purpose.

Step 2 Select provisionally from the allowable torque table in this catalog based on the load torque.

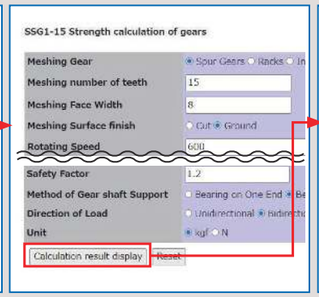
■ For provisional selection from this catalog

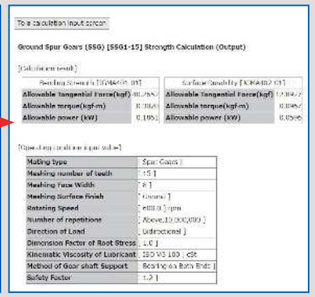


Step 3 Calculate the strength under the actual usage conditions.

Calculate the strength formally using the various gear strength formulas. We recommend using the simple strength calculation available on our website.

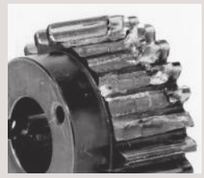
■ Use the strength calculation function on our website.





■ Bending strength

Calculated values of the strength at which the gear teeth do not break due to fatigue.



Example of failure due to insufficient bending strength

■ Surface durability

Calculated values of the strength at which the gear teeth do not wear due to surface fatigue damage.

Example of wear due to insufficient surface durability

Product Precautions

Common Notes

[Caution on Product Characteristics]

(1) The allowable torque shown in the table are calculated values according to the assumed usage conditions. Please see Page 44 for more details.

(2) The backlash values shown in the table are the theoretical values for the backlash in the normal direction of a pair of identical gears in mesh.

(3) Significant variations in temperature or humidity can cause dimensional changes in plastic gears, including tooth diameter, bore, and backlash. The accuracy and tolerances shown in the catalog are values obtained when machining is performed.

(4) For hole lengths 3.5x the bore or more, the hole center is out of H7 tolerance.

(5) For bores of ϕ 4 or below, the bore tolerance is H8. As well, the tolerance is H8 for ϕ 5 or ϕ 6 bores with hole length (total length) 3x the bore or more.

(6) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.

(7) For products having a tapped hole, a set screw is included.

(8) Products with S at the end of the Catalog No. are semi-custom stock products. For lead time details, see Page 38.

(9) For S semi-custom standard products weighing 15 kg or more, eyebolt mounting screws (2-M12 depth 25 mm) are machined around the periphery of the boss side surface. Confirm the PCD of the screw on the website.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 48 when performing modifications and/or secondary operations for safety concerns.

(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

(3) See Page 22 for more details on Hardened Plus (H Series and HJ Series).

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.

(2) Certain products which would otherwise have a very long tapped hole are counterbored. For details, please see the KHK website.

(3) Black oxide is not re-applied to parts undergoing secondary operations.

(4) For bores over ϕ 50, the bore tolerance is H8.

MSGA/MSGB Ground Spur Gears

[Caution on Product Characteristics]

(1) The keyway tolerance is the value before hardening.

(2) Products marked with "**" have a small amount of material between the corner of the keyway and the tooth root. This mode of failure must be considered when selecting these gears.
For details, please see the KHK website.

[Caution on Secondary Operations]

(1) No secondary operations can be performed on these finished gears due to the applied carburizing process.

SSGS Ground Spur Pinion Shafts

[Caution on Product Characteristics]

(1) For the center distance of the profile shifted gear, please refer to "Center distance of stock spur gear meshing with profile shifted gear" on Page 56.

(2) The backlash values shown in the table are the theoretical values for the normal direction for the internal ring in mesh with an SSG spur gear.

SSAG Ground Spur Gears

[Caution on Secondary Operations]

(1) A reference surface is set for gear grinding. Use the surface opposite from the markings as the reference surface for secondary operation.

SSS Spur Pinion Shafts

[Caution on Product Characteristics]

(1) For the center distance of the profile shifted gear, please refer to "Center distance of stock spur gear meshing with profile shifted gear" on Page 102.

(2) The backlash values shown in the table are the theoretical values for the normal direction for the internal ring in mesh with an SS spur gear.

SUSF/DSF F-loc Gears

[Caution on Product Characteristics]

(1) F-loc gears are attached to the shaft by a friction coupling. Recommended shaft tolerances are g6, h6, or h7. Torque slippage should be considered when making a selection.

(2) Do not tighten the clamping screw without inserting a shaft, or the bore will be permanently deformed and will not accept a shaft.

(3) The tooth and hub mating section has a rotation-stop pin inserted.

(4) To reduce heat generation, it is recommended to mate DSF with steel gears.

[Caution on Secondary Operations]

(1) Secondary operations cannot be performed, as this is a complete product.

NSU/PU Plastic Spur Gears with Steel Core

[Caution on Product Characteristics]

(1) When the core O.D is the same as the hub diameter, you may see some serration on the hub. There is no effect on the strength of the gear.

(2) To reduce heat generation, it is recommended to mate them with steel gears.

[Caution on Secondary Operations]

(1) Because it affects the welded portion, there is no additional modification other than to the boss part.

PS/PSA Plastic Spur Gears

[Caution on Product Characteristics]

(1) To reduce heat generation, it is recommended to mate them with steel gears.

[J Series]

(1) Since tapped holes of plastic products are easily broken, avoid too much tightening when fastening screws. For some products which have a short tapped hole (products marked with "**" tap size), fasten with torques less than 0.12N・m for M4, and 0.38N・m for M5.

SUKB Stainless Steel Hubs

[Caution on Product Characteristics]

(1) The area where PSA Plastic Spur Gears are attached, with hub tolerance h7.

(2) The friction coupling torques shown in the table are reference values calculated according to these set values; friction factors and fastening torques of the tapping screw.

(3) Please refer to the assembly example below, and then attach the hub to the gear with the accessories, plain washers, spring washers and hexagon socket head cap screws.

(4) In accordance with the fastening torque values shown in the dimension table, use a torque wrench and fasten hexagon socket head cap screws firmly, to attach the hub.

(5) If a fastened hexagon socket head cap screw comes loose, the friction tightening torque values shown in the table can not be maintained. It is recommended to check the fasteners regularly and retighten when required.

(6) For secure positioning, it is recommended to use dowel pins.

[Caution on Secondary Operations]

(1) Datum plane for machining hubs is the outer circumference of the hub, where PSA Plastic Spur Gears are attached, and the flank of the flange is facing the hub.

(2) For modifying tapped holes at the outer circumference of the hub, apply machining at positions which will not interfere with the mounting bolt head, using the S1KBK figure as reference.

DS Injection Molded Spur Gears

[Caution on Product Characteristics]

(1) The bore tolerance is -0.05 to -0.30, but it may be slightly higher at the center of the hole.

(2) For the dimensional accuracy of each part, see the dimensional tolerance of molded items on Page 185.

(3) To reduce heat generation, it is recommended to mate them with steel gears.

[Caution on Secondary Operations]

(1) As it is a molded item, bubbles may form inside the material. Avoid performing secondary operations.

SSR Steel Ring Gears (Spur Gears)

[Caution on Product Characteristics]

(1) The backlash values shown in the table are the theoretical values for the normal direction for the internal ring in mesh with an SS spur gear.

(2) The bore tolerance is modified at H8, but there may be some errors as the ring shape deforms easily.

Application Hints

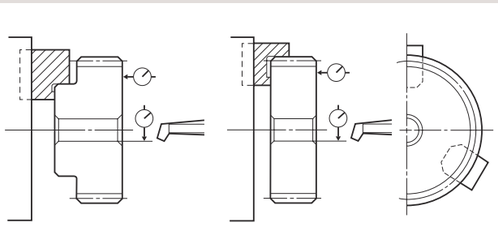
In order to use KHK stock gears safely, carefully read the Application Hints before proceeding.
If there are questions or you require clarifications, please contact your nearest distributor.
E-mail: info@khkgears.net

1. Cautions on Handling

① KHK products are packaged one by one to prevent scratches and dents, but if you find issues such as rust, scratches, or dents when the product is removed from the box after purchase, please contact the supplier.
② Depending on the handling method, the product may become deformed or damaged. Plastic gears and ring gears deform particularly easily, so please handle with care.

2. Caution on Performing Secondary Operations

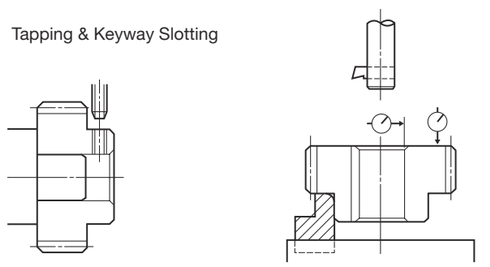
① If reboring, it is important to pay special attention to locating the center in order to avoid runout.
② The reference datum for gear machining is the bore. Therefore, use the bore for locating the center. If it is too difficult to do for small bores, the alternative is to use one spot on the bore and the runout of the side surface.
③ If reworking using scroll chucks, we recommend the use of new or rebored jaws for improved precision. Please exercise caution not to crush the teeth.



Lathe Operations

④ The maximum bore size is dictated by the requirement that the strength of the hub is to be higher than that of the gear teeth. The maximum bore size should be 60% to 70% of the hub diameter (or tooth root diameter), and 50% to 60% for keyway applied modifications.
⑤ In order to avoid stress concentration, round the keyway corners.

Tapping & Keyway Slotting



⑥ To avoid problems of reduced gear precision and other manufacturing difficulties, do not attempt to machine the gears to reduce face widths.
⑦ When induction-hardening S45C products, thermal stress cracks may appear. Also, note that the precision grade of the product declines by 1 or 2 grades, as deformation on material may occur. If you require tolerance for bore or other parts, machining is necessary after heat treatment.

Induction Hardening

If you apply induction hardening to the gear teeth of S45C products, you need to designate the hardness and where to apply the heat treatment. Below is an example of common specifications and KHK's specifications for hardening:

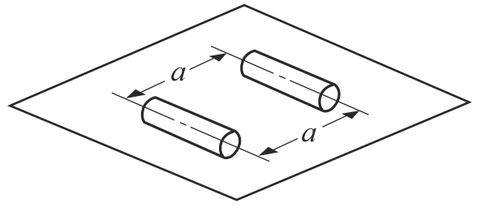
● Common Specifications for Heat Treatment
Hardened location: Tooth surface, or Tooth surface and Tooth root
Hardness: Within 10 HRC in the range from 45 to 60 HRC
(Example: 48 to 58 HRC)

● KHK's Specifications for Heat Treatment
Hardened location: Tooth surface, or Tooth surface and Tooth root
Hardness: 50 to 60 HRC

* Hardness and Depth of Gear-teeth Induction Hardening
The hardening method and the state of the hardened teeth area vary depending on the size of gears.
Since different hardening treatment is applied in accordance with the module and number of teeth, the hardness level you designate is referred to as the hardness of the reference diameter. For some of our products, the hardness at tooth tip / root may not be equal to the hardness you designated.
As to the effective case depth for S45C, it is specified by JIS, as "The distance from the surface of the case to the area with hardness HV450." The case depth differs from area to area of a tooth, so the depth cannot be specified.

3. Points of Caution during Assembly

① The recommended center distance tolerance of KHK stock spur gears is H7 for ground gears and H8 for cut gears. Backlash may be adjusted by changing the center distance of mating gears. For the connection between center distance change amount and peripheral direction backlash amount, use the gear calculation software.



$a=m(Z_1+Z_2)/2$

Where
a : Center distance
m : Module
Z_1 : No. of teeth of pinion
Z_2 : No. of teeth of gear

② The table below indicates the tolerance on the total length of KHK stock spur gears. Please refer to this data when designing gearboxes or other components.

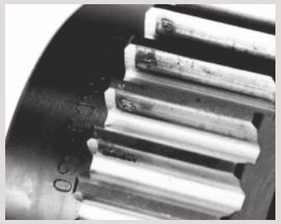
■ Total Length Tolerance for Spur and Helical Gears

Total Length (mm)	Tolerance
30 or less	0 -0.10
31 to 100	0 -0.15
Over 100	0 -0.20

[Note] The following products are excluded from this table: Spur pinion shafts, Injection molded spur gears, F-loc hub spur gears, and MC nylon products.

③ Spur gears produce no thrust forces; however, be sure to fasten them firmly with stepped shafts, or collars, to prevent shifting toward the shaft.
Keyways are generally used in fastening gears to a shaft, and they should be fastened by applying drilled holes for set screws, or applying flats to the shaft, in case of fastening only with set screws.
There are also methods of secure settings using parts for engaging the hole and the axis.
④ Verify that the two shafts are parallel. Incorrect assembly will lead to uneven teeth contact which will cause noise and wear. (After assembly, check the tooth contact by painting a thin layer of red lead primer or the like on the gear teeth, meshing them together and rotating them.)

■ Test example: Abrasion occurred on SSG3-30 due to poor edge contact (only 30% with proper contact).



Poor tooth contact and pitting

In this example, the gear oil used is equivalent to the JIS gear oil category 2, No. 3
The design conditions were load torque at 278 rpm, 42.5 kg/m (12 kW), 1.5 times the allowable bending strength, and 3 times the allowable surface durability torque.
The pitting occurred on the poor tooth contact area after 60 hours of continuous operation.

4. Cautions on Starting

① Check the following items before starting.
- Are the gears fastened securely?
- Is there uneven tooth contact?
- Is there adequate backlash?
(Be sure to avoid zero-backlash.)
- Has proper lubrication been supplied?

② If gears are exposed, be sure to attach a safety cover to ensure safety. Also, be careful not to touch rotating gears.
③ If there is any abnormality such as noise or vibration during startup, stop the operation immediately and check the assembly condition such as tooth contact, eccentricity and looseness.

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

⚠ Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
   ① Turn off the power switch.
   ② Do not reach or crawl under the product.
   ③ Wear appropriate clothing and protective equipment for the work.

⚠ Caution: Cautions in preventing accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

■ Center distance of stock spur gear meshing with profile shifted gear

The center distance of the stock gear (x = 0) that meshes with profile shifted gear (x = +0.5) of m = 1 is shown in the table at right. Please multiply by the module of the gear to be used.

■ Center distance where number of teeth is 12 to 30 (unit: mm)

Number of teeth (x = +0.5) / Number of teeth (x = 0)	10	11
12	11.4410	11.9428
13	11.9428	12.4446
14	12.4446	12.9462
15	12.9462	13.4477
16	13.4477	13.9492
17	13.9492	14.4505
18	14.4505	14.9518
19	14.9518	15.4530
20	15.4530	15.9542
21	15.9542	16.4553
22	16.4553	16.9564
23	16.9564	17.4574
24	17.4574	17.9583
25	17.9583	18.4592
26	18.4592	18.9601
27	18.9601	19.4610
28	19.4610	19.9618
29	19.9618	20.4625
30	20.4625	20.9633

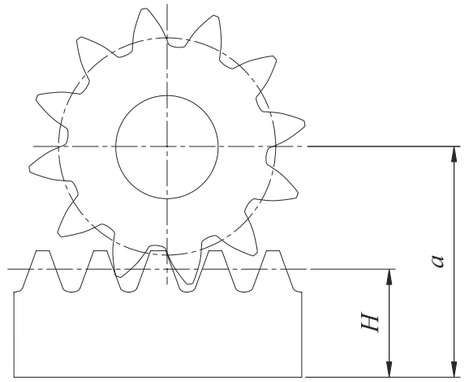
■ Center distance where number of teeth is 32 to 62 (unit: mm)

Number of teeth (x = +0.5) / Number of teeth (x = 0)	10	11
32	21.4640	21.9647
34	22.4653	22.9660
35	22.9660	23.4666
36	23.4666	23.9671
38	24.4677	24.9683
40	25.4688	25.9693
42	26.4698	26.9703
44	27.4707	27.9712
45	27.9712	28.4716
46	28.4716	28.9721
48	29.4725	29.9729
50	30.4733	30.9736
52	31.4740	31.9744
54	32.4747	32.9750
55	32.9750	33.4754
56	33.4754	33.9757
58	34.4760	34.9763
60	35.4766	35.9769
62	36.4772	36.9774

■ Center distance where number of teeth is 64 to 200 (unit: mm)

Number of teeth (x = +0.5) / Number of teeth (x = 0)	10	11
64	37.4777	37.9780
65	37.9780	38.4782
66	38.4782	38.9785
68	39.4787	39.9790
70	40.4792	40.9794
72	41.4796	41.9799
75	42.9803	43.4805
76	43.4805	43.9807
80	45.4813	45.9814
84	47.4820	47.9822
85	47.9822	48.4823
88	49.4826	49.9828
90	50.4830	50.9831
95	52.9837	53.4838
100	55.4844	55.9845
120	65.4866	65.9867
150	80.4890	80.9890
200	105.4915	105.9915

■ Mounting distance of a profile shifted gear and the meshing rack



$$a = \frac{zm}{2} + H + xm$$

Where
a : Mounting distance
H : Pitch line height
m : Module
z : No. of teeth
x : Profile shift coefficient

SSG Module 0.5, 0.8

Ground Spur Gears

Made to Order

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C*
Heat treatment	—*
Tooth hardness	200 to 270HB
Surface treatment	Black oxide coated except for teeth

* Products with modules of 0.8 or under use S45C thermal refined equivalent materials and are not hardened.

Ground Spur Gears

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth

* The precision grade of J Series products is equivalent to the value shown in the table.

Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth

* The precision grade of J Series products is equivalent to the value shown in the table.

Ground Spur Gears

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth (excludes semi-custom products)

* The precision grade of J Series products is equivalent to the value shown in the table.

Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

* The precision grade of F Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

■ Features of F Series

- No rattling of shaft and gear when fastening
- Freely positionable mounting for easy meshing of teeth
- Easily mounted and removed for repeated use
- The bushing slips when overloaded to reduce damage to the gears.

■ Structure and Engagement Principles

The structure consists of an outer ring and inner ring with split grooves in the tapered part, and hexagon socket head cap screws that convert the force into tightening strength.
In principle, the tightening strength of hexagon socket head cap screws spreads the outer and inner rings by taper engagement, and the gear and shaft become fastened by surface pressure.

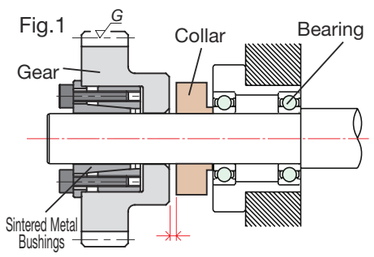
* For the backlash of each product, please refer to the dimension table of the original product.

■ Mounting Method and Precautions

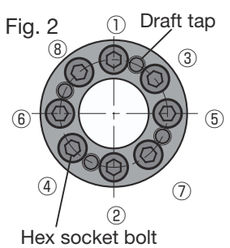
① Shaft diameter recommended tolerance is h7. The limit is h8, but we recommend h6 when minimizing runout.
Use 1.6a as reference for the surface roughness of the shaft diameter.
② Wipe away any debris, dirt or oil on the shaft surface and hole of the fastened section with thinner or the like, and lightly apply hydraulic oil #68. Do not apply molybdenum-based oil or oil with additives, as this may cause reduced fastening torque or slippage.
③ Pass completely through the shaft while pressing the bushing flange against the gear before tightening. Removal will not be possible, so be sure to leave a clearance of 1mm or more on the gear rear surface side. (Fig.1)
④ Use a torque wrench to fasten bolts on opposite sides when tightening.
First tighten at 1/4 of the regulated torque, then at 1/2 of the regulated torque, before finally tightening up to the regulated torque. Do not tighten without passing through the shaft, or fasten the bolts after insertion on the draft tap side. (Fig.2)
⑤ If the shaft has a keyway, the fastened section contact area is reduced and the transmission rate is decreased by 15 to 20%.

Fig.1



Clearance (Assembly conditions require clearance of 1 mm or more)

Fig. 2



■ Removal Method and Precautions

① Turn off the power source (supply), check that no load is applied to the gear, and confirm that there is no danger due to falling, etc.
② Insert removed bolts into all draft taps, and gradually and evenly tighten each bolt in diagonal order until removal is complete.
③ The washer and thread surfaces will be roughened, compromising tightening strength, if the bolts are reused. Consequently, we recommend using new bolts of the same size.

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

* The precision grade of F Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

■ Features of F Series

- No rattling of shaft and gear when fastening
- Freely positionable mounting for easy meshing of teeth
- Easily mounted and removed for repeated use
- The bushing slips when overloaded to reduce damage to the gears.

■ Structure and Engagement Principles

The structure consists of an outer ring and inner ring with split grooves in the tapered part, and hexagon socket head cap screws that convert the force into tightening strength.
In principle, the tightening strength of hexagon socket head cap screws spreads the outer and inner rings by taper engagement, and the gear and shaft become fastened by surface pressure.

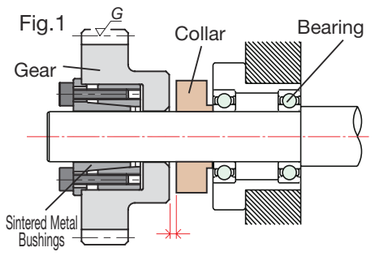
* For the backlash of each product, please refer to the dimension table of the original product.

■ Mounting Method and Precautions

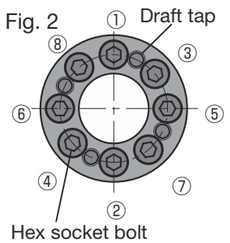
① Shaft diameter recommended tolerance is h7. The limit is h8, but we recommend h6 when minimizing runout.
Use 1.6a as reference for the surface roughness of the shaft diameter.
② Wipe away any debris, dirt or oil on the shaft surface and hole of the fastened section with thinner or the like, and lightly apply hydraulic oil #68. Do not apply molybdenum-based oil or oil with additives, as this may cause reduced fastening torque or slippage.
③ Pass completely through the shaft while pressing the bushing flange against the gear before tightening. Removal will not be possible, so be sure to leave a clearance of 1mm or more on the gear rear surface side. (Fig.1)
④ Use a torque wrench to fasten bolts on opposite sides when tightening.
First tighten at 1/4 of the regulated torque, then at 1/2 of the regulated torque, before finally tightening up to the regulated torque. Do not tighten without passing through the shaft, or fasten the bolts after insertion on the draft tap side. (Fig.2)
⑤ If the shaft has a keyway, the fastened section contact area is reduced and the transmission rate is decreased by 15 to 20%.

Fig.1



Clearance (Assembly conditions require clearance of 1 mm or more)

Fig. 2



■ Removal Method and Precautions

① Turn off the power source (supply), check that no load is applied to the gear, and confirm that there is no danger due to falling, etc.
② Insert removed bolts into all draft taps, and gradually and evenly tighten each bolt in diagonal order until removal is complete.
③ The washer and thread surfaces will be roughened, compromising tightening strength, if the bolts are reused. Consequently, we recommend using new bolts of the same size.

KHK E Series

Delivered with this marking.

Please see Page 16 for more details.

■ Features of E Series

- Can be easily installed with one bolt (shortens work time)
- Concentricity 0. 02mm
- Zero backlash between the gear and shaft
- No decrease in shaft strength due to fretting wear (worn or seized shaft)
- No need to machine keyways on the shaft, reducing the number of parts such as keyway materials and set screws
- Does not take up mounting space and easy to position and match the phase
- Finished by the manufacturer in 2 working days (excluding the day ordered)

■ Operation principle of ETP-E Plus

The pressure medium enclosed in the chamber is pressurized due to the tightening of the pressure screw and moves into the sleeve. The pressure of this pressure medium causes the sleeve to receive pressure from the inside, which causes the shaft side sleeve to contract, the hub side sleeve to expand, allowing the shaft and hub to be fastened via the sleeve.

* Allowable torque is the value when the thrust force is 0, and allowable thrust force is when the torque is 0.
* Allowable torque and allowable thrust force are the values at 20°C.
* Tolerance of the target shaft diameter is h7 (g6, h6).

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

* The precision grade of E Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

KHK E Series

Delivered with this marking.

Please see Page 16 for more details.

■ Features of E Series

- Can be easily installed with one bolt (shortens work time)
- Concentricity 0. 02mm
- Zero backlash between the gear and shaft
- No decrease in shaft strength due to fretting wear (worn or seized shaft)
- No need to machine keyways on the shaft, reducing the number of parts such as keyway materials and set screws
- Does not take up mounting space and easy to position and match the phase
- Finished by the manufacturer in 2 working days (excluding the day ordered)

■ Operation principle of ETP-E Plus

The pressure medium enclosed in the chamber is pressurized due to the tightening of the pressure screw and moves into the sleeve. The pressure of this pressure medium causes the sleeve to receive pressure from the inside, which causes the shaft side sleeve to contract, the hub side sleeve to expand, allowing the shaft and hub to be fastened via the sleeve.

* Allowable torque is the value when the thrust force is 0, and allowable thrust force is when the torque is 0.
* Allowable torque and allowable thrust force are the values at 20°C.
* Tolerance of the target shaft diameter is h7 (g6, h6).

"*" is an SSAG product that's given secondary operations.

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

* The precision grade of E Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

KHK E Series

Delivered with this marking.

Please see Page 16 for more details.

■ Features of E Series

- Can be easily installed with one bolt (shortens work time)
- Concentricity 0. 02mm
- Zero backlash between the gear and shaft
- No decrease in shaft strength due to fretting wear (worn or seized shaft)
- No need to machine keyways on the shaft, reducing the number of parts such as keyway materials and set screws
- Does not take up mounting space and easy to position and match the phase
- Finished by the manufacturer in 2 working days (excluding the day ordered)

■ Operation principle of ETP-E Plus

The pressure medium enclosed in the chamber is pressurized due to the tightening of the pressure screw and moves into the sleeve. The pressure of this pressure medium causes the sleeve to receive pressure from the inside, which causes the shaft side sleeve to contract, the hub side sleeve to expand, allowing the shaft and hub to be fastened via the sleeve.

* Allowable torque is the value when the thrust force is 0, and allowable thrust force is when the torque is 0.
* Allowable torque and allowable thrust force are the values at 20°C.
* Tolerance of the target shaft diameter is h7 (g6, h6).
"*" is an SSAG product that's given secondary operations.

Specifications	
Precision grade	JIS grade N7 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

* The R Series is given secondary operations and has accuracy grades "equivalent" to the original products.

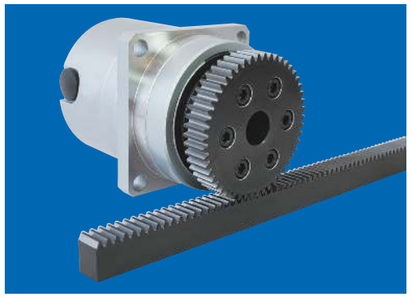
■ Features of R Series

- Products matching the mounting holes of the corresponding speed reducer series.
- They come with set bolts and can be used immediately.
- As flange mounting types, they have high rigidity and the gear does not bend.
- Ideal for the mating pinion of racks.



■ Rack and pinion for corresponding flange output speed reducers

Mounting hub dia. H (Common to all speed reducers)	Nidec Shimpo VRG Series	Sumitomo Heavy Industries IB Series	Harmonic Drive Systems HPG Series	R Series Catalog Numbers		KHK recommended mating rack
24	C90	P120	20	SSG Module - No. of teeth	R24	KRGF Series SRGF Series SRF Series See Page 211

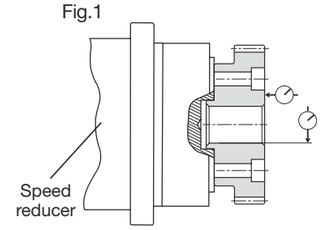
60	-	-	65		R60	

(R Series Catalog Numbers)
R series catalog numbers are composed as follows:
(Base SSG ground spur gear catalog number) + R + (mounting hub diameter)

■ Mounting Method and Precautions

① Clean the gear mounting surface and flange surface of the speed reducer and make sure that there are no scratches or dents.
② Set the mounting hub of the gear in the hole at the rotational center of the flange, and temporarily tighten the hexagon socket head cap screws.
③ Tighten the hexagon socket head cap screws on the diagonals while checking the runout of the gear reference face (Fig. 1). (Fig.2)

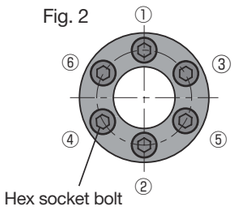
Fig.1



■ Removal Method and Precautions

① Turn off the power source (supply) and check that no load is applied to the gear.
② Loosen the hexagon socket head cap screws and make sure that the gear moves freely.
③ Remove the hexagon socket head cap screws while making sure that there is no danger of falling, etc.

Fig. 2



■ We recommend ideal pinions for speed reducers

① CP type and helical type stock gears can be given secondary operations according to the customer's specifications at "KHK Quick-Mod Gears". See Page 24 for more details
② High-precision gears for reduction gears are also available with a short delivery time. Estimates are available upon the submission of production drawings.
③ Feel free to contact us about selecting racks and pinions.

SSG Series

Common Specifications	
Precision grade	JIS N7 grade (JIS B 1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

SSCPG Series

Common Specifications	
Precision grade	JIS N7 grade (JIS B 1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

ZSTP Series

Common Specifications	
Precision grade	JIS B 1702-1:1998 N6 grade
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Pressure angle	20°
Helix angle/direction	19° 31' 41" left helix
Material	SCM440
Heat treatment	Thermal refined, gear teeth induction hardened
Tooth hardness	HRC50 to 60
Surface treatment	Black oxide coated except for teeth and portions given secondary operation

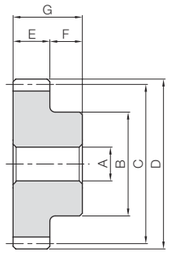
KS Module 1.5~5 Thermal Refined Spur Gears

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)
Gear teeth	Standard full depth
Pressure angle	20°
Material	SCM440
Heat treatment	Thermal refining only
Tooth hardness	225 to 352HB
Surface treatment	Black oxide coating
Shape	S1

* The precision grade of J Series products is equivalent to the value shown in the table.



S1

To order Hardened Plus, please specify Catalog No. + H. **Example: KS1.5-20H**

To order J Series Hardened Plus, please specify: Catalog No. + H + J + BORE. **Example: KS1.5-20HJ10**

"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

KS-(H) Hardened Spur Gear recommended mating racks

KRF-H/KRFD-H Hardened Racks

Please see Page 232 for more details.

KS Thermal Refined Spur Gear recommended mating racks

KRF/KRFD Thermal Refined Racks

Please see Page 238 for more details.

Product Precautions → Page 46
Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—*
Tooth hardness	less than 194HB*
Surface treatment	Black oxide coating

* Products with modules of 1.5 use S45C thermal refined equivalent materials, so the surface hardness is 200~270 HB.

■ Center distance of stock spur gear meshing with profile shifted gear

The center distance of the stock gear (x = 0) that meshes with profile shifted gear (x = +0.5) of m = 1 is shown in the table at right. Please multiply by the module of the gear to be used.

■ Center distance where number of teeth is 12 to 30 (unit: mm)

Number of teeth (x = 0) \ Number of teeth (x = +0.5)	10	11
12	11.4410	11.9428
13	11.9428	12.4446
14	12.4446	12.9462
15	12.9462	13.4477

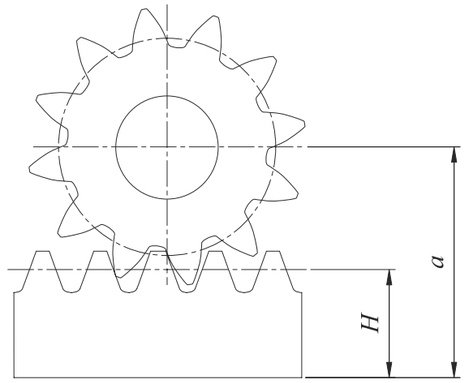
120	65.4866	65.9867
150	80.4890	80.9890
200	105.4915	105.9915

■ Mounting distance of a profile shifted gear and the meshing rack



$$a = \frac{zm}{2} + H + xm$$

Where
a : Mounting distance
H : Pitch line height
m : Module
z : No. of teeth
x : Profile shift coefficient

Product Precautions → Page 46

Please make use of GCSW for Web (gear calculation software).

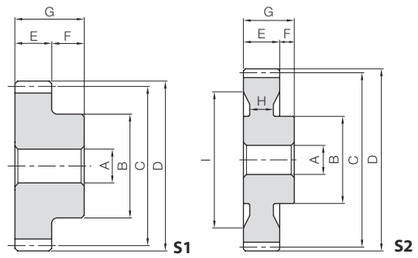
To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
Example: SS2-16HJ14

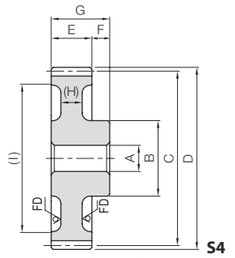
"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

Product Precautions → Page 46
Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating
Backlash	0.14 to 0.28

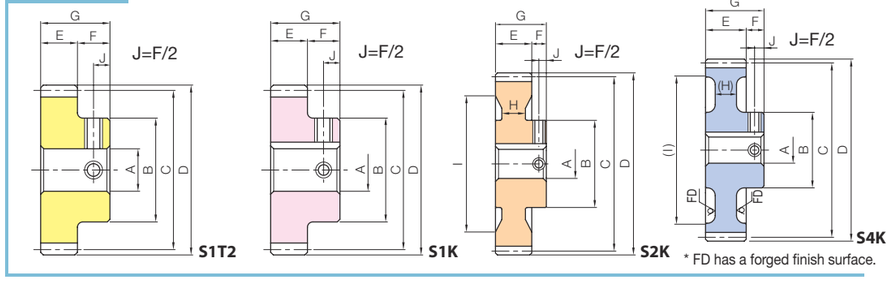
* The precision grade of J Series products is equivalent to the value shown in the table.





* FD has a forged finish surface.

J Series



* FD has a forged finish surface.

To order Hardened Plus, please specify Catalog No. + H. Example: SS2.5-12H

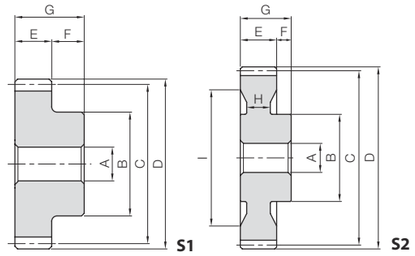
To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
Example: SS2.5-14HJ14

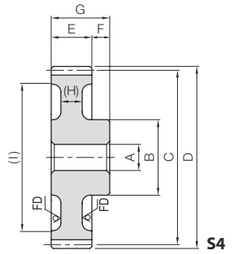
"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

Product Precautions → Page 46
Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating
Backlash	0.14 to 0.32

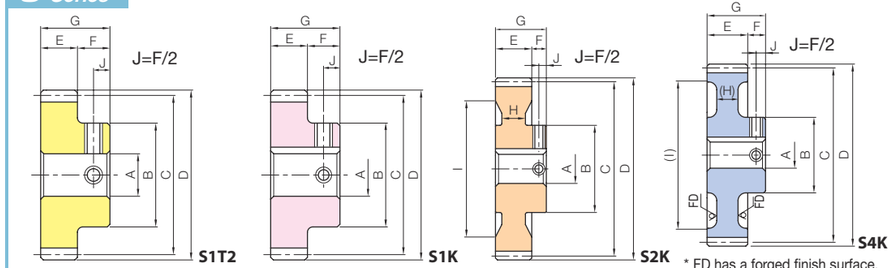
* The precision grade of J Series products is equivalent to the value shown in the table.





* FD has a forged finish surface.

J Series



* FD has a forged finish surface.

H To order Hardened Plus, please specify Catalog No. + H. **Example: SS3-12H**

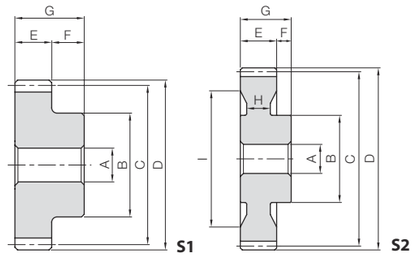
To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
Example: SS3-14HJ16

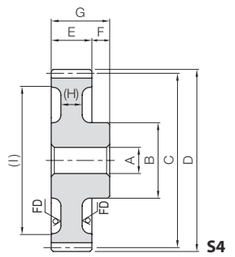
"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

Product Precautions → Page 46
Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coated (excludes semi-custom products)
Backlash	0.18 to 0.38

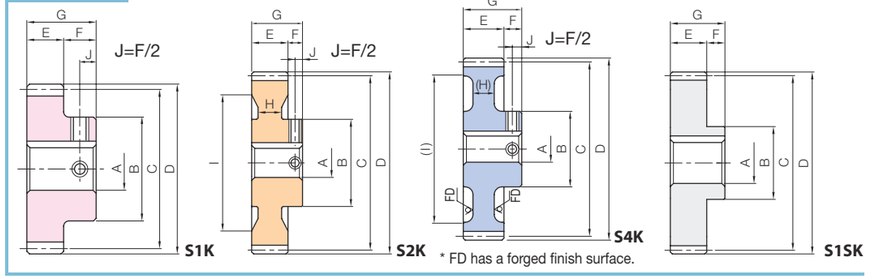
* The precision grade of J Series products is equivalent to the value shown in the table.





* FD has a forged finish surface.

J Series



* FD has a forged finish surface.

To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
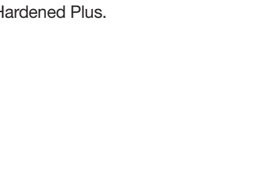
Example: SS5-14HJ25



"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

Product Precautions → Page 46
Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coated (excludes semi-custom products)
Backlash	0.22 to 0.48

* The precision grade of J Series products is equivalent to the value shown in the table.

To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
Example: SS6-13HJ28

"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

Product Precautions → Page 46
Precautions for Standard Machined Products → Pages 38~40

Please make use of GCSW for Web (gear calculation software).

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coated (excludes semi-custom products)

* The precision grade of J Series products is equivalent to the value shown in the table.

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coated except for portions given secondary operation

* The precision grade of F Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

■ Features of F Series

- No rattling of shaft and gear when fastening
- Freely positionable mounting for easy meshing of teeth
- Easily mounted and removed for repeated use
- The bushing slips when overloaded to reduce damage to the gears.

■ Mounting Method and Precautions

① Shaft diameter recommended tolerance is h7. The limit is h8, but we recommend h6 when minimizing runout. Use 1.6a as reference for the surface roughness of the shaft diameter.
② Wipe away any debris, dirt or oil on the shaft surface and hole of the fastened section with thinner or the like, and lightly apply hydraulic oil #68. Do not apply molybdenum-based oil or oil with additives, as this may cause reduced fastening torque or slippage.
③ Pass completely through the shaft while pressing the bushing flange against the gear before tightening. Removal will not be possible, so be sure to leave a clearance of 1mm or more on the gear rear surface side. (Fig.1)
④ Use a torque wrench to fasten bolts on opposite sides when tightening. First tighten at 1/4 of the regulated torque, then at 1/2 of the regulated torque, before finally tightening up to the regulated torque. Do not tighten without passing through the shaft, or fasten the bolts after insertion on the draft tap side. (Fig.2)
⑤ If the shaft has a keyway, the fastened section contact area is reduced and the transmission rate is decreased by 15 to 20%.

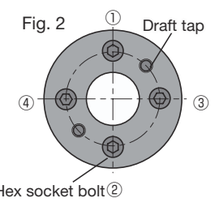
Clearance (Assembly conditions require clearance of 1 mm or more)

Fig. 2



■ Removal Method and Precautions

① Turn off the power source (supply), check that no load is applied to the gear, and confirm that there is no danger due to falling, etc.
② Insert removed bolts into all draft taps, and gradually and evenly tighten each bolt in diagonal order until removal is complete.
③ The washer and thread surfaces will be roughened, compromising tightening strength, if the bolts are reused. Consequently, we recommend using new bolts of the same size.

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coated except for portions given secondary operation

* The precision grade of F Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

■ Features of F Series

- No rattling of shaft and gear when fastening
- Freely positionable mounting for easy meshing of teeth
- Easily mounted and removed for repeated use
- The bushing slips when overloaded to reduce damage to the gears.

■ Mounting Method and Precautions

① Shaft diameter recommended tolerance is h7. The limit is h8, but we recommend h6 when minimizing runout. Use 1.6a as reference for the surface roughness of the shaft diameter.
② Wipe away any debris, dirt or oil on the shaft surface and hole of the fastened section with thinner or the like, and lightly apply hydraulic oil #68. Do not apply molybdenum-based oil or oil with additives, as this may cause reduced fastening torque or slippage.
③ Pass completely through the shaft while pressing the bushing flange against the gear before tightening. Removal will not be possible, so be sure to leave a clearance of 1mm or more on the gear rear surface side. (Fig.1)
④ Use a torque wrench to fasten bolts on opposite sides when tightening.
First tighten at 1/4 of the regulated torque, then at 1/2 of the regulated torque, before finally tightening up to the regulated torque. Do not tighten without passing through the shaft, or fasten the bolts after insertion on the draft tap side. (Fig.2)
⑤ If the shaft has a keyway, the fastened section contact area is reduced and the transmission rate is decreased by 15 to 20%.

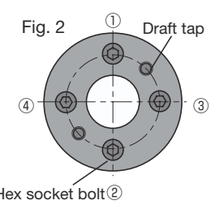
Clearance (Assembly conditions require clearance of 1 mm or more)

Fig. 2



■ Removal Method and Precautions

① Turn off the power source (supply), check that no load is applied to the gear, and confirm that there is no danger due to falling, etc.
② Insert removed bolts into all draft taps, and gradually and evenly tighten each bolt in diagonal order until removal is complete.
③ The washer and thread surfaces will be roughened, compromising tightening strength, if the bolts are reused. Consequently, we recommend using new bolts of the same size.

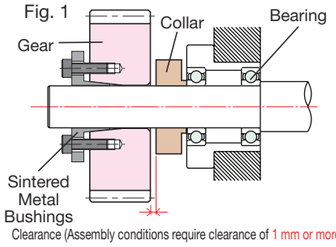
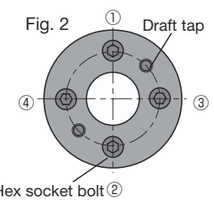
* For the backlash of each product, please refer to the dimension table of the original product.

Fig. 1



Clearance (Assembly conditions require clearance of 1 mm or more)

Fig. 2



■ Removal Method and Precautions

① Turn off the power source (supply), check that no load is applied to the gear, and confirm that there is no danger due to falling, etc.
② Insert removed bolts into all draft taps, and gradually and evenly tighten each bolt in diagonal order until removal is complete.
③ The washer and thread surfaces will be roughened, compromising tightening strength, if the bolts are reused. Consequently, we recommend using new bolts of the same size.

To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
Example: SSA1-24HJ10

"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

Product Precautions → Page 46
Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating

* The precision grade of J Series products is equivalent to the value shown in the table.

To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
Example: SSA2-15HJ12

"*" is a product with the original bore diameter, so Hardened Plus is not available. See Page 22 for more details on Hardened Plus.

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating

* The precision grade of J Series products is equivalent to the value shown in the table.

To order J Series Hardened Plus products, please specify: Catalog No. + H + J + BORE.
Example: SSA3-15HJ14

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coated except for portions given secondary operation

* The precision grade of F Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

■ Features of F Series

- No rattling of shaft and gear when fastening
- Freely positionable mounting for easy meshing of teeth
- Easily mounted and removed for repeated use
- The bushing slips when overloaded to reduce damage to the gears.

■ Mounting Method and Precautions

① Shaft diameter recommended tolerance is h7. The limit is h8, but we recommend h6 when minimizing runout. Use 1.6a as reference for the surface roughness of the shaft diameter.
② Wipe away any debris, dirt or oil on the shaft surface and hole of the fastened section with thinner or the like, and lightly apply hydraulic oil #68. Do not apply molybdenum-based oil or oil with additives, as this may cause reduced fastening torque or slippage.
③ Pass completely through the shaft while pressing the bushing flange against the gear before tightening. Removal will not be possible, so be sure to leave a clearance of 1mm or more on the gear rear surface side. (Fig.1)
④ Use a torque wrench to fasten bolts on opposite sides when tightening. First tighten at 1/4 of the regulated torque, then at 1/2 of the regulated torque, before finally tightening up to the regulated torque. Do not tighten without passing through the shaft, or fasten the bolts after insertion on the draft tap side. (Fig.2)
⑤ If the shaft has a keyway, the fastened section contact area is reduced and the transmission rate is decreased by 15 to 20%.

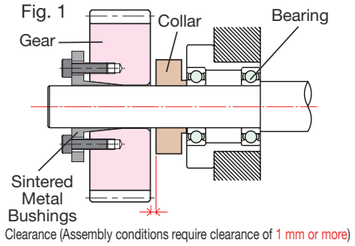
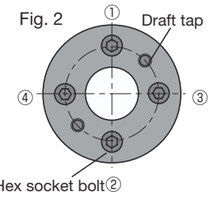
* For the backlash of each product, please refer to the dimension table of the original product.

Fig. 1



Clearance (Assembly conditions require clearance of 1 mm or more)

Fig. 2



■ Removal Method and Precautions

① Turn off the power source (supply), check that no load is applied to the gear, and confirm that there is no danger due to falling, etc.
② Insert removed bolts into all draft taps, and gradually and evenly tighten each bolt in diagonal order until removal is complete.
③ The washer and thread surfaces will be roughened, compromising tightening strength, if the bolts are reused. Consequently, we recommend using new bolts of the same size.

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coated except for portions given secondary operation

* The precision grade of F Series products is equivalent to the value shown in the table.
* Bushing material: S45C, screw material: SCM435

■ Features of F Series

- No rattling of shaft and gear when fastening
- Freely positionable mounting for easy meshing of teeth
- Easily mounted and removed for repeated use
- The bushing slips when overloaded to reduce damage to the gears.

■ Mounting Method and Precautions

① Shaft diameter recommended tolerance is h7. The limit is h8, but we recommend h6 when minimizing runout. Use 1.6a as reference for the surface roughness of the shaft diameter.
② Wipe away any debris, dirt or oil on the shaft surface and hole of the fastened section with thinner or the like, and lightly apply hydraulic oil #68. Do not apply molybdenum-based oil or oil with additives, as this may cause reduced fastening torque or slippage.
③ Pass completely through the shaft while pressing the bushing flange against the gear before tightening. Removal will not be possible, so be sure to leave a clearance of 1mm or more on the gear rear surface side. (Fig.1)
④ Use a torque wrench to fasten bolts on opposite sides when tightening.
First tighten at 1/4 of the regulated torque, then at 1/2 of the regulated torque, before finally tightening up to the regulated torque. Do not tighten without passing through the shaft, or fasten the bolts after insertion on the draft tap side. (Fig.2)
⑤ If the shaft has a keyway, the fastened section contact area is reduced and the transmission rate is decreased by 15 to 20%.

SUS/SUSA Module 2.5, 3, 4

Stainless Steel Spur Gears

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	SUS303
Heat treatment	—
Tooth hardness	(less than 187HB)

* The precision grade of J Series products is equivalent to the value shown in the table.

J

Precautions for Standard Machined Products → Pages 38~40

Specifications	
Precision grade	JIS grade N8 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	SUS303
Heat treatment	—
Tooth hardness	(less than 187HB)

* The gear grade listed is the value before clamping. The precision grade of products with a module of 0.5 or less is equivalent to the value shown in the table.

Plastic Spur Gears with Steel Core

Specifications	
Precision grade	JIS grade N9 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	MC602ST with S45C core
Heat Treatment	—
Tooth hardness	(115 to 120HRR)

* The precision grade of J Series products is equivalent to the value shown in the table.

* In regard to MC Nylon gears, other materials are available for plastic gears, including Ultra High Molecular Weight Polyethylene (U-PE), which has excellent abrasion resistance and resin conforming to the Plastic Implementation Measure (PIM).
A single piece order is acceptable and will be produced as a custom-made gear.
Please see Page 26 for more details on quotations and orders.

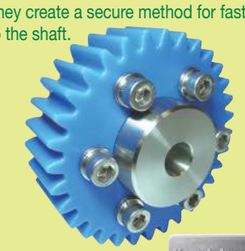
Stainless Steel Hubs for PSA Now Available !

Standardized sectional stainless steel hubs. They create a secure method for fastening to the shaft.



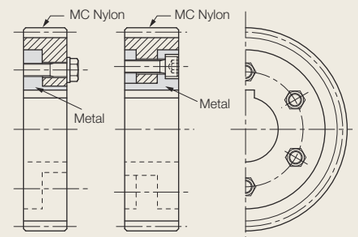
Please see Page 180 for more details.

■ How to attach gears to shafts

To attach gears to shafts, in case of light loads, methods include using keys, taper pins, spring pins, and press fitting after mounting the setscrews. Since loosening tends to occur in the conditions below, plastic gears are better fastened by using a steel hub.

1. When the circumferential temperature is high
2. For large diameter gears
3. If forward-reverse motion impacts keys

For fastening steel hubs into plastic gears with bolts, see right for various methods.



Fastening with a steel hub bolt

Technical information on gears is available on KHK Web Site.

Plastic Spur Gears

* In regard to MC Nylon gears, other materials are available for plastic gears, including Ultra High Molecular Weight Polyethylene (U-PE), which has excellent abrasion resistance and resin conforming to the Plastic Implementation Measure (PIM).
A single piece order is acceptable and will be produced as a custom-made gear.
Please see Page 26 for more details on quotations and orders.

Stainless Steel Hubs for PSA Now Available !

Standardized sectional stainless steel hubs. They create a secure method for fastening to the shaft.

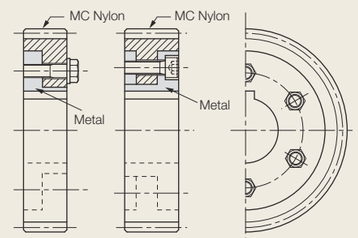
Please see Page 180 for more details.

■ How to attach gears to shafts

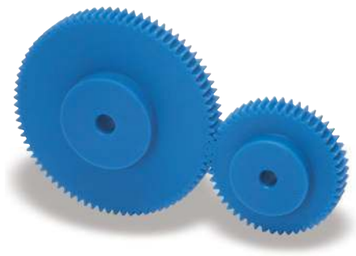
To attach gears to shafts, in case of light loads, methods include using keys, taper pins, spring pins, and press fitting after mounting the setscrews. Since loosening tends to occur in the conditions below, plastic gears are better fastened by using a steel hub.

1. When the circumferential temperature is high
2. For large diameter gears
3. If forward-reverse motion impacts keys

For fastening steel hubs into plastic gears with bolts, see right for various methods.



Fastening with a steel hub bolt



Specifications	
Precision grade	JIS grade N9 (JIS B1702-1: 1998)*
Gear teeth	Standard full depth
Pressure angle	20°
Material	MC901
Heat treatment	—
Tooth hardness	(115 to 120HRR)

* The precision grade is equivalent to the value shown in the table.

■ Features of Stainless Steel Hubs

- This is an attached stainless steel hub with excellent rust resistance.
- Perfectly matches with PSA Plastic Spur Gears, and suitable for food processing machinery.
- Efficient use of materials and superior cost performance for this product.

■ Coupling Torque for Stainless Steel Hubs

Coupling torque for Stainless Steel Hubs is calculated from the frictional force generated by the fastening torque at the contact face of the gear and the stainless steel hub.

Fastening Torque F(N) is calculated from the equation below.

$$F = \frac{n \cdot 1000 \cdot T}{K \cdot d}$$

n : Number → No. of threaded holes shown in the dimension table.
T : Tightening torque (N·m) → Fastening torque shown in the dimension table.
K : Torque coefficient → Set the value at 0.164
d : Nominal diameter (mm) → Socket head screw size shown in the dimension table (M5 = 5mm)

Coupling torque T_f (N·m) is calculated from the equation below.

$$T_f = \frac{F \cdot \mu \cdot d_w}{2000}$$

F : Fastening torque (N) → The value obtained from the calculation above.
μ : Friction factor at the contact face of the gear and the stainless steel hub → Set the value at 0.18
d_w : Pitch diameter of the threaded hole (mm) → Socket head screw size C shown in the dimension table

Helical Gears

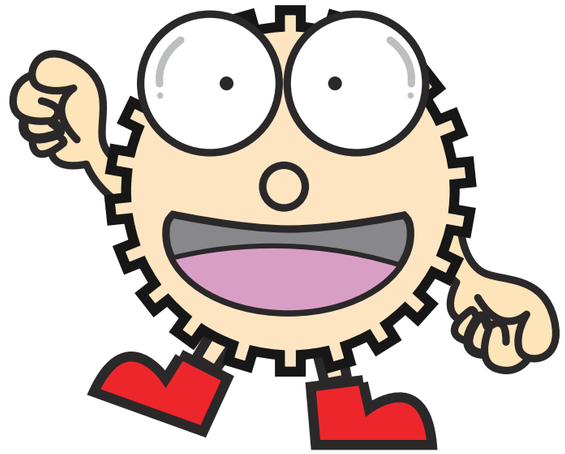
KHG Ground Helical Gears	SH Helical Gears
	
Material: SCM440	Material: S45C
***m*1~3 Page 194**	***m*2, 3 Page 202**



Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Helical Gears

K H G 1 - 20 R

- R — Direction of Helix (Right)
- 20 — No. of Teeth (20)
- 1 — Module (1)
- G — Other Products (Ground Gears)
- H — Type (Helical Gears)
- K — Material (SCM440)

Material
S S45C
K SCM440

Type
H Helical Gears

Other Information
G Ground Gears

Spur Gears
Helical Gears
Internal Gears
Racks
CP Racks & Pinions
Miter Gears
Bevel Gears
Screw Gears
Worm Gears

Other Products

Features

KHK stock helical gears are quiet, high-strength and easy to use. They are suitable wherever you require high-speed rotation including in machine tools, speed reducers, etc. The following table lists the main features.

Catalog Number	KHG	SH
Module	1~3	2~3
Reference section of gear	Rotating plane	Normal plane
Material	SCM440	S45C
Heat Treatment	Thermal refined, gear teeth induction hardened	—
Tooth Surface Finish	Ground	Cut
Precision JIS B 1702-1:1998	N6	N8
Secondary Operations	Possible except for tooth	Possible
Features	It has excellent accuracy, strength, wear resistance and quietness, and allows secondary operations. Usable in the same center distance of the spur gear.	It has higher strength and quietness than the SS spur gears.

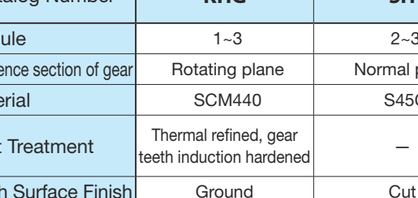
Selection Hints

It is important to thoroughly understand the contents of the product tables as well as “CAUTION” notes before making the selection. You must specify the right or left hand by including the letter R or L in the catalog number when ordering.

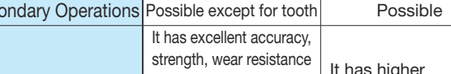
1. Caution in Selecting the Mating Gears

The KHK stock helical gears KHG series (transverse module) and SH series (normal module) are not interchangeable. Please keep this in mind when making your selection. Also, right hand and left hand helical mating gears operate as a set. See the photos below for reference and for help in making a proper selection.

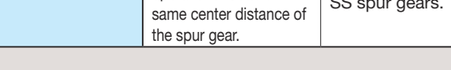
■ Direction of Helix



Left (L) Right (R)



Pinion (L) & Rack (R)



Pinion (R) & Rack (L)

■ Mating Helical Gear Selection Chart (○ Allowable × Not allowable)

Catalog Number and Direction of Helix		KHG		SH		KRHG KRHGF		SRH	
		RH	LH	RH	LH	RH	LH	RH	LH
KHG	RH	×	○	×	×	×	○	×	×
	LH	○	×	×	×	○	×	×	×
SH	RH	×	×	×	○	×	×	×	○
	LH	×	×	○	×	×	×	○	×

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions.

■ Calculation of Bending Strength of Gears

Item \ Catalog Number	KHG	SH
Formula NOTE 1	Formula of spur and helical gears on bending strength (JGMA401-01)	
No. of teeth of mating gears	Same no. of teeth	
Rotational Speed	600rpm	100rpm
Design Life (Durability)	Over 10^7cycles	
Impact from motor	Uniform load	
Impact from load	Uniform load	
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)	
Allowable bending stress at root σ_{Flim} (kgf/mm^2) NOTE 2	30	19
Safety factor S_F	1.2	

■ Calculation of Surface Durability (Except where it is common with bending strength)

Item \ Catalog Number	KHG	SH
Formula NOTE 1	Formula of spur and helical gears on surface durability (JGMA402-01)	
Kinematic viscosity of lubricant	100cSt(50°C)	
Gear support	Symmetric support by bearings	
Allowable Hertz stress σ_{Hlim} (kgf/mm^2)	116	49
Safety factor S_H	1.15	

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications.
The units for the rotational speed (rpm) and the stress (kgf/mm^2) are adjusted to the units needed in the formula.

Product Precautions

Common Notes

[Caution on Product Characteristics]

(1) The allowable torque shown in the table are calculated values according to the assumed usage conditions. Please see Page 190 for more details.
(2) The backlash values shown in the table are the theoretical values for the backlash in the normal direction of gears of the same series in mesh.
(3) A set of helical gears must be identical in module and number of teeth, but opposite in spiral hands.
(4) These helical gears produce axial thrust forces. Please see Page 193 for more details.
(5) For the helical gear series combinations, see the Mating Gear Selection Chart on Page 190.
(6) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.
(7) For products having a tapped hole, a set screw is included.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 192 when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Certain products which would otherwise have a very long tapped hole are counterbored. For details, please see the KHK website.
(3) Black oxide is not re-applied to parts undergoing secondary operations.
(4) For bores over ϕ 50, the bore tolerance is H8.

KHG Ground Helical Gears

[Caution on Secondary Operations]

(1) Because of the influence of hardening residual stress, avoid removing the entire boss, as it may cause the gears to deform.

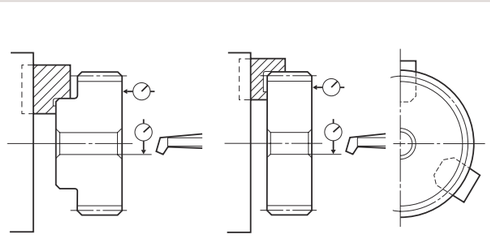
Application Hints

In order to use KHK stock gears safely, carefully read the Application Hints before proceeding. If there are questions or you require clarifications, please contact our technical department or your nearest distributor.

E-mail: info@khkgears.net

1. Caution on Performing Secondary Operations

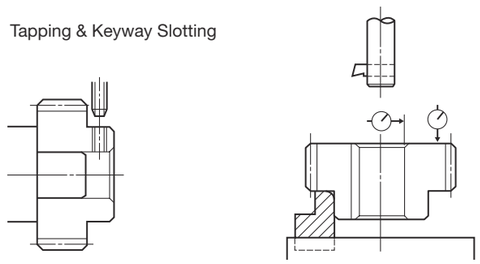
① If reboring, it is important to pay special attention to locating the center in order to avoid runout.
② The reference datum for gear machining is the bore. Therefore, use the bore for locating the center. If it is too difficult to do for small bores, the alternative is to use one spot on the bore and the runout of the side surface.
③ If reworking using scroll chucks, we recommend the use of new or rebored jaws for improved precision. Please exercise caution not to crush the teeth.



Lathe Operations

④ The maximum bore size is dictated by the requirement that the strength of the hub is to be higher than that of the gear teeth. The maximum bore size should be 60% to 70% of the hub diameter (or tooth root diameter), and 50% to 60% for keyway applied modifications.
⑤ In order to avoid stress concentration, round the keyway corners.

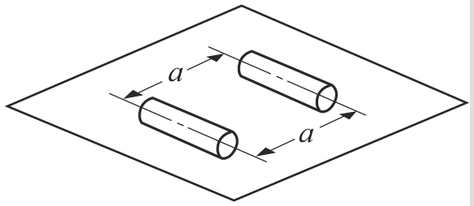
Tapping & Keyway Slotting



⑥ To avoid problems of reduced gear precision and other manufacturing difficulties, do not attempt to machine the gears to reduce face widths.
⑦ When induction-hardening S45C products, thermal stress cracks may appear. Also, note that the precision grade of the product declines by 1 or 2 grades, as deformation on material may occur. If you require tolerance for bore or other parts, machining is necessary after heat treatment.

2. Points of Caution during Assembly

① The recommended center distance tolerance of KHK stock helical gears is H7 for ground gears and H8 for cut gears.
The amount of backlash is given in the product table for each gear. For the center distance of SH, refer to the dimensional table page.



$$a = \frac{d_1 + d_2}{2}$$

Where
a : Center distance
d_1 : Pitch diameter of pinion
d_2 : Pitch diameter of gear

② The table below indicates the tolerance on the total length of KHK stock spur gears. Please refer to this data when designing gearboxes or other components.

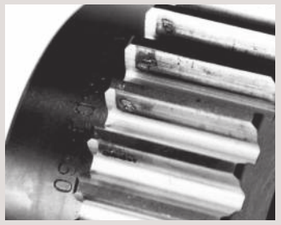
■ Total Length Tolerance for Spur and Helical Gears

Total Length (mm)	Tolerance
30 or less	0 -0.10
31 to 100	0 -0.15
Over 100	0 -0.20

[Note] The following products are excluded from this table: Spur pinion shafts, Injection molded spur gears, F-loc hub spur gears, and MC nylon products.

③ Verify that the two shafts are parallel. Incorrect assembly will lead to uneven teeth contact which will cause noise and wear. (After assembly, check the tooth contact by painting a thin layer of red lead primer or the like on the gear teeth, meshing them together and rotating them.)

■ Test example: Abrasion occurred on SSG3-30 due to poor edge contact (only 30% with proper contact).

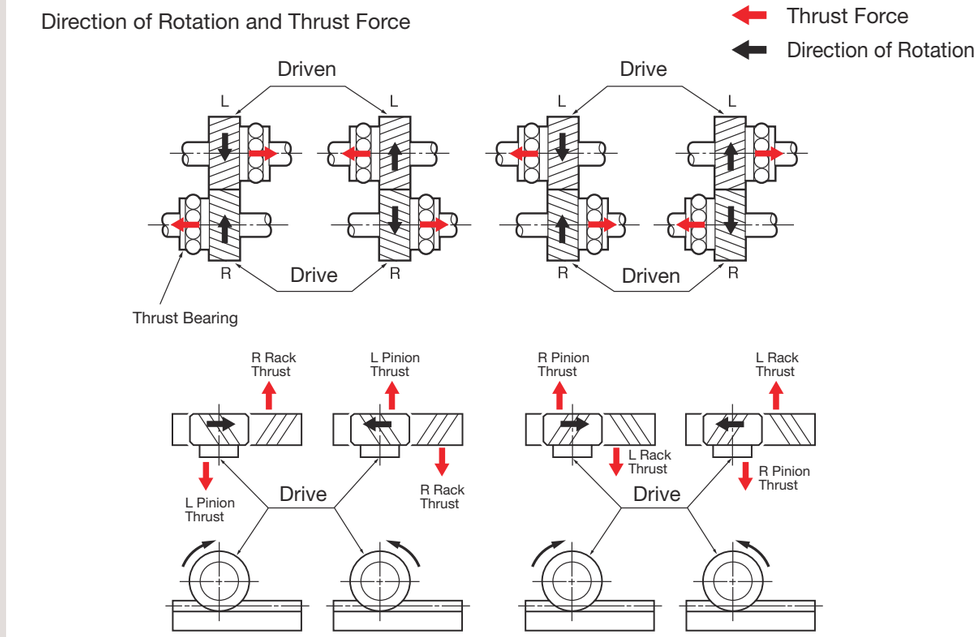


Poor tooth contact and pitting

Gear oil (equivalent to JIS gear oil category 2 No. 3) The design conditions were load torque at 278 rpm, 42.5 kg/m (12 kW), 1.5 times the allowable bending strength, and 3 times the allowable surface durability torque. The pitting occurred on the poor tooth contact area after 60 hours of continuous operation.

④ Due to the helix of helical gears, they produce thrust force (axial). The bearings must be selected properly to be able to handle these thrust forces. The direction of the thrust forces depend on the helix direction and the direction of rotation as shown below.
For details, use gear calculation software GCSW.

Direction of Rotation and Thrust Force



3. Cautions on Starting

① Check the following items before starting.
- Are the gears installed securely?
- Is there uneven tooth contact?
- Is there adequate backlash?
  (Be sure to avoid zero-backlash.)
- Has proper lubrication been supplied?

② If gears are exposed, be sure to attach a safety cover to ensure safety. Also, be careful not to touch rotating gears.
③ If there is any abnormality such as noise or vibration during startup, stop the operation immediately and check the assembly condition such as tooth contact, eccentricity and looseness.

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
   ① Turn off the power switch.
   ② Do not reach or crawl under the product.
   ③ Wear appropriate clothing and protective equipment for the work.

Caution Cautions in Preventing Accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

Specifications	
Precision grade	JIS grade N6 (JIS B1702-1: 1998)*
Reference section of gear	Rotating plane
Gear teeth	Standard full depth
Transverse pressure angle	20°
Helix angle	21°30'
Material	SCM440
Heat treatment	Thermal refined, gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth

* The precision grade of J Series products is equivalent to the value shown in the table.

Usable in the assembly distance of the spur gear.

KHG ground helical gears use a "transverse" module.
The assembly distance is the same as spur gear pairs with the same module and number of teeth.
Improved strength and low noise: Take the next step up from spur gears.

Usable in the assembly distance of the spur gear.

KHG ground helical gears use a "transverse" module.
The assembly distance is the same as spur gear pairs with the same module and number of teeth.
Improved strength and low noise: Take the next step up from spur gears.

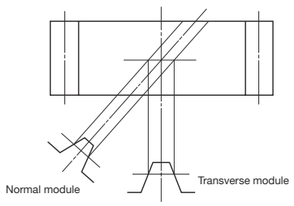
■ Reference Section of Gears

Transverse module (SH helical gears) and normal module (KHG ground helical gears) are available for the gear teeth according to the gear reference cross section. Even if products have the same helix angle and module, transverse and normal module gears have different gear teeth and thus cannot engage.



* Above is for illustration purposes only and differs from actual tooth forms.

Recommended Mating Helical Racks

KHK
Helical Rack & Pinion

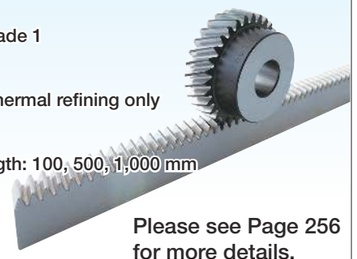
KHG Ground Helical Gears

Precision: JIS Grade N6
Material: SCM440
Heat Treatment: Thermal refined / gear teeth induction hardened
Module: m1 to 3

Please see Page 194 for more details.

KRHG/KRHGF/KRHGFD Ground Helical Racks

Precision: KHK Grade 1
Material: SCM440
Heat Treatment: Thermal refining only
Module: m1 to 3
Nominal Total Length: 100, 500, 1,000 mm



Please see Page 256 for more details.

SH Helical Gears

Precision: JIS Grade N8
Material: S45C
Heat Treatment: -
Module: m2, 3

Please see Page 202 for more details.

SRH·SRHF·SRHFD Helical Racks

Precision: KHK Grade 5
Material: S45C
Heat Treatment: -
Module: m2, 3
Nominal Total Length: 100, 500, 1,000 mm

Please see Page 258 for more details.

ZSTP Ground Helical Gears

Dedicated for racks

Precision: JIS Grade N6
Material: SCM440
Heat Treatment: Thermal refined / gear teeth induction hardened
Module: m2 to 6

Please see Page 262 for more details.

SHE Helical Gears

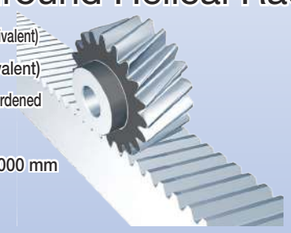
Dedicated for racks

Precision: JIS Grade N8
Material: S45C
Heat Treatment: -
Module: m1.5 to 6

Please see Page 260 for more details.

ZST/ZSTD Hardened Ground Helical Racks

Precision: DIN Grade 6 (KHK Grade 2 equivalent)
Material: DIN C45 (JIS S45C equivalent)
Heat Treatment: Gear teeth induction hardened
Module: m2 to 6
Nominal Total Length: 1,000, 2,000 mm



Please see Page 262 for more details.

SRHEF Helical Racks

Precision: KHK Grade 4
Material: S45C
Heat Treatment: -
Module: m1.5 to 6
Nominal Total Length: 1,000 mm

Please see Page 260 for more details.

Internal Gears

SI Steel Internal Gears	SIR Internal Ring Gears

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Internal Gears

S I R 2 - 120

- No. of Teeth (120)
- Module (2)
- Other Products (Ring Shape)
- Type (Internal Gears)
- Material (S45C)

Material
S S45C

Type
I Internal Gears

Other Information
R Ring Gears

Features

KHK stock internal gears are offered in modules 0.5 to 3 in 50 to 200 teeth. They can be used in many applications including planetary gear drives.

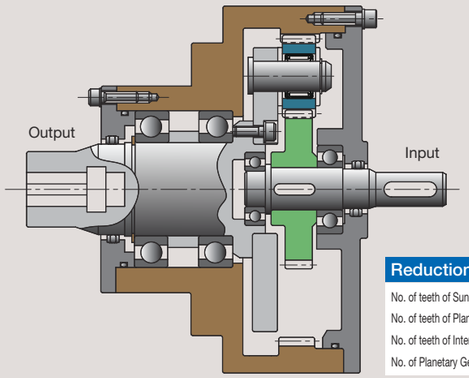
Catalog Number	SI	SIR
Module	0.5~3	2~3
Material	S45C	S45C
Heat Treatment	—	—
Tooth Surface Finish	Cut	Cut
Precision JIS B 1702-1:1998	N8 NOTE 1	N9
Secondary Operations	Possible	Possible
Features	A popular type of internal gear; Allows secondary operations.	They have a ring shape with a large number of teeth. Allows secondary operations.

[Note 1] The product accuracy class having a module less than 0.8 corresponds to 'equivalent' as shown in the table.

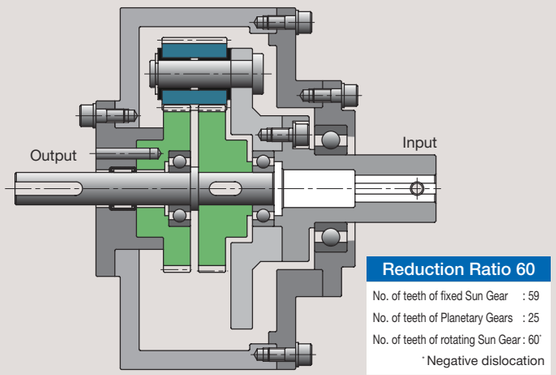
Application Examples

KHK stock internal gears are used to reduce the size of various equipment, such as reduction gears.

■ **Design example of reduction gear** (not a design for machinery or a device in actual use)



Planetary Gear Mechanism used in a reduction gear

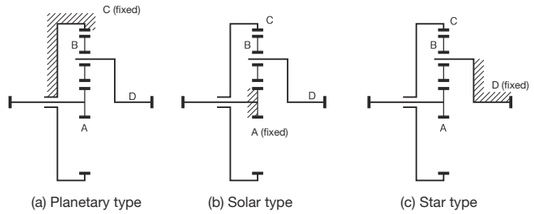


Mechanical Paradox Gear Mechanism used in a large reduction gear

■ **Example of combinations**

No. of teeth of Internal Gear	No. of Planetary Gears	No. of teeth of sun gear	No. of teeth of Planetary Gears	Reduction ratio of planetary type	Reduction ratio of solar type	Reduction ratio of star type
60	3	18	21	4.333	1.3	-3.333
80	3	16	32	6	1.2	-5
80	3	40	20	3	1.5	-2
100	3	20	40	6	1.2	-5
100	3	50	25	3	1.5	-2

Types of Planetary Gear Mechanism



(a) Planetary type (b) Solar type (c) Star type

Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables.

1. Caution in Selecting the Mating Gears

KHK stock internal gears can mate with any spur gears of the same module, however, there are cases of interference depending on the number of teeth of the mating gear. The table below contains the assumptions established for these products in order to compute gear strengths.

■ **Interferences and the symptoms**

Type	SYMPTOMS	CAUSES
Involute interference	The tip of the internal gear digs into the root of the pinion.	Too few teeth on the pinion.
Trochoid interference	The exiting pinion tooth contacts the internal gear tooth.	Too little difference in number of teeth of the two gears.
Trimming interference	Pinion can slide in or out axially but cannot move radially.	Too little difference in number of teeth of the two gears.

■ **Allowable Mating Pinions and Number of Teeth**

No. of teeth of Internal Gear	No. of teeth of Allowable Mating Pinions		
	Lower limit No. of teeth due to involute interference	Upper limit No. of teeth due to trochoid interference	Upper limit No. of teeth due to trimming interference
50	22	41	33
60	21	51	43
80	20	72	64
100	19	92	84
120	19	112	104
160	19	152	144
200	18	192	184

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions. The table below contains the assumptions established for various products in order to compute gear strengths.

■ **Calculation of Bending Strength of Gears**

Item \ Catalog Number	SI	SIR
Formula NOTE 1	Formula of spur and helical gears on bending strength (JGMA401-01)	
No. of teeth of mating gears	30	
Rotational Speed	100rpm	
Design Life (Durability)	Over 10^7 cycles	
Impact from motor	Uniform load	
Impact from load	Uniform load	
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)	
Allowable bending stress at root σ_{Flim} (kgf/mm^2)	19	
Safety factor S_F	1.2	

■ **Calculation of Surface Durability (Except where it is common with bending strength)**

Formula NOTE 1	Formula of spur and helical gears on surface durability (JGMA402-01)
Kinematic viscosity of lubricant	100cSt (50°C)
Gear support	Symmetric support by bearings
Allowable Hertz stress σ_{Hlim} (kgf/mm^2)	49
Safety factor S_H	1.15

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications.
The units for the rotational speed (rpm) and the stress (kgf/mm^2) are adjusted to the units needed in the formula.

Application Hints

In order to use KHK stock internal gears safely, read the Application Hints carefully before proceeding.
Please refer to Page 48 for "Cautions on Handling" and Page 49 for "Cautions on Starting".

1. Caution on Performing Secondary Operations

① If performing outer diameter machining, it is important to pay special attention to locating the center in order to avoid runout.
② Please exercise caution not to cause deformation when chucking the outer diameter. Gear precision may deteriorate and cause trouble.
③ To avoid problems of reduced gear precision and other manufacturing difficulties, do not attempt to machine the gears to reduce face widths.

2. Points of Caution during Assembly

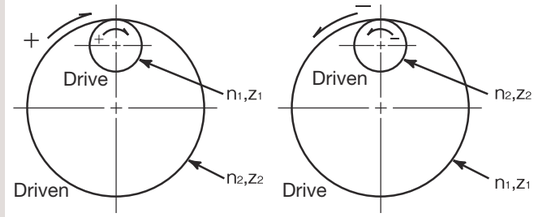
① KHK stock internal gears are designed to give the proper normal direction backlash when assembled using the center distance given by the formula below. The amount of backlash is given in the dimension table for each gear.

$$a = \frac{d_2 - d_1}{2}$$

Where
a : Center distance
d_1 : Pitch diameter of pinion
d_2 : Pitch diameter of internal gear

② Refer to the figure below for the direction of rotation of internal gears.

Gear Ratio and Direction of Rotation



Gear Ratio $i = \frac{z_2}{z_1} = \frac{n_1}{n_2}$

z : No. of teeth
n : Rotational speed

③ To use as a planetary gear drive, the following conditions must be satisfied.

Gear tooth conditions for planetary gear mechanisms

- Condition 1: $z_c = z_a + 2z_b$
- Condition 2: $\frac{z_a + z_c}{N}$ = Integer
- Condition 3: $z_b + 2 < (z_a + z_b) \sin\frac{180°}{N}$

z_a : No. of teeth of Sun Gear
z_b : No. of teeth of Planetary Gears
z_c : No. of teeth of Internal Gear
N : No. of Planetary Gears

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
   ① Turn off the power switch.
   ② Do not reach or crawl under the product.
   ③ Wear appropriate clothing and protective equipment for the work.

Caution Cautions in Preventing Accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

Ⓜ ··· Made to Order

Calculation of Allowable Transmission Torque

One advantage of a planetary gear system is that they share load burdens by grouping multiple planetary gears.
This enables high torque capacity transmission.
The following formula is the calculation method for T1 (Allowable transmission torque of Sun Gear) and T2 (Allowable transmission torque of Planetary Carrier), shown in the table.

$T1=Ts\cdot Zp\cdot \eta$ (kgf·m) ····· (1)

$T2=Ts\cdot Zp\cdot u\cdot \eta$ (kgf·m) ····· (2)

Here,

Ts : Allowable transmission torque for a Sun gear (kgf·m) on a meshed pair of sun gear and planetary gear.
For a sun gear meshed with a planetary gear, the number of revolutions is set to 100rpm.

Zp : Number of planetary gears used in the system

u : Speed ratio

η : Contact efficiency for torque transmission
In consideration of machining accuracy, variation in tooth thickness or other factors on the planetary carrier, the contact efficiency is set to 75%.

ZSTP Ground Helical Gears — Material: SCM440 — *m*2~6 Page 262
ZST-GL Assembly Gauges — Material: S45C — *m*1.5~6 Page 264

M Includes Made to Order

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Racks

K R G F 2 - 500 H

- H — Gear teeth induction hardened
- 500 — Total Length (500mm)
- 2 — Module (2)
- F — Other Products (End Machined)
- G — Other Products (Ground Gears)
- R — Type (Rack)
- K — Material (SCM440)

Material

M	SCM415
K	SCM440
S	S45C
SU	Stainless Steel
BS	Brass
P	MC901
D	Polyacetal

Type

R	Racks
RH	Helical Racks
RO	Round Racks
S	Spur Gears
H	Helical Gears

Other Information

F	Racks with Machined Ends
D	Racks with Bolt Holes
K	Racks with Drill Holes
G	Ground Gears
H	Gear teeth induction hardened
HL	Laser hardened
ZST	############

Features

KHK stock racks are made for high precision linear motion applications. We offer a large selection of racks ranging from module 0.5 to 10 and lengths up to 2000 mm. The following table lists the main features.

■ Racks

Catalog Number Note 1	Module	Total Length mm Parentheses show no. of teeth	Material	Heat Treatment	Tooth Surface Finish	Gear accuracy KHK R 001 Note 3 Parentheses show JIS B 1702-1	Features
MRGF/MRGFD	1.5~3	500	SCM415	Tooth area carburized	Ground	1	Racks that have been carburized and ground that have excellent accuracy, strength and wear resistance. Secondary operations are possible except for tooth.
KRGF-H KRGFD-H	1.5~3	500, 1000	SCM440	Thermal refined, gear teeth induction hardened	Ground	1	Racks that have been tempered, hardened and ground that have excellent accuracy, strength and wear resistance. Secondary operations are possible except for tooth.
KRG/KRGF/ KRGFD	1~3	100, 500, 1000	SCM440	Thermal refined	Ground	1	Racks that have been tempered and ground that have excellent accuracy and strength.
SRG/SRGF SRGFD/SRGFK	0.5~6	100, 300, 500, 1000	S45C	Gear teeth induction hardened NOTE 2	Ground	3	Racks that have been hardened and ground with a good balance of accuracy, wear resistance and cost. Secondary operations are possible except for tooth.
KRF-H/KRFD-H	1.5~5	1000	SCM440	Thermal refined, gear teeth induction hardened	Cut	5	Racks that have been tempered and hardened that have excellent strength and wear resistance. Secondary operations are possible except for tooth.
SRF-H SRFD-H	1.5~6	1000	S45C	Gear teeth induction hardened	Cut	5	Racks that have been hardened with excellent wear resistance. Secondary operations are possible except for tooth.
SRF-HL SRFD-HL	1.5~6	1000, 1500, 2000	S45C	Gear teeth laser hardened	Cut	4	Racks that have been laser hardened with a good balance of wear resistance and cost. Secondary operations are possible except for tooth.
KRF/KRFD	1.5~5	500, 1000	SCM440	Thermal refined	Cut	4	Racks that have been tempered with excellent strength.
SRAF/SRAFD SRAFK	1.5~4	1000, 2000	S45C	—	Cut	4	These racks have smaller tooth height in comparison to SRF Racks.
SR/SRF SRFD/SRFK	0.5~10	100, 300, 500, 1000, 1500, 2000	S45C	—	Cut	4	Many lineups are available at a low price and excellent usability.
SUR/SURF SURFD	1~4	500, 1000	SUS304	Solution treated	Cut	5	Stainless steel racks with rust resistance.
DRF/DRFD DRFK	1~3	500, 1000	Polyacetal	—	Cut	5	Racks made of polyacetal with shorter overall length than nylon, making them suitable for joining together.
PR/PRF	1~3	500, 1000	MC901	—	Cut	5	Nylon racks can be used with no lubrication.
BSR	0.5~1	300	Free-cutting Brass (C3604)	—	Cut	4	Brass racks with excellent machinability.
SRO/SROS	1~5	500, 1000	S45C	—	Cut	4	Round racks that are suitable when the rack side moves.
SURO	1~3	500, 1000	SUS303	—	Cut	5	Round racks made of stainless steel. Suitable when the rack side moves.
DR	0.8~2	2000	Duracon (R) (M25-44) NOTE 4	—	Injection Molded	8	Thin plastic racks that can be bent.
KRHG/KRHGF KRHGFD	1~3	100, 500, 1000	SCM440	Thermal refined	Ground	1	Helical racks that have been tempered and ground with excellent accuracy that have higher strength and quietness as compared with KRGF.
SRH/SRHF SRHFD	2~3	100, 500, 1000	S45C	—	Cut	5	As they are helical racks, they have higher strength and quietness as compared with SRF.
SRHEF	1.5~6	1000	S45C	—	Cut	4	As they are helical racks, they have higher strength and quietness as compared with SRF. They can be used like CP racks.
ZST/ZSTD	2~6	1000, 2000	DIN C45 (JIS Grade S45C equivalent)	Gear teeth induction hardened	Ground	Grade 2 equivalent	Helical racks that have been hardened and ground that have excellent accuracy, wear resistance and quietness. They can be used like CP racks. Secondary operations are possible except for tooth.

■ Pinion

SHE	1.5~6	(18~30)	S45C	—	Cut	(N8)	SRHEF pinions that have excellent strength and quietness as compared with SS due to its helix.
ZSTP	2~6	(18~30)	SCM440	Thermal refined, gear teeth induction hardened	Ground	(N6)	ZST pinions with high accuracy that have excellent strength, wear resistance and quietness due to its helix. Secondary operations are possible except for tooth.

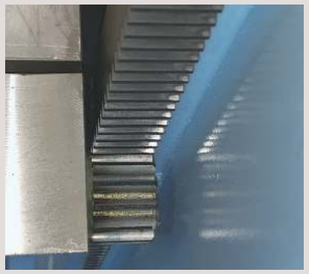
[NOTE 1] The catalog numbers of the above racks with (F) suffix have both ends machined so that they can be butted against each other. The items with (D) have mounting screw holes for immediate assembly.
[NOTE 2] Products with module under 1 are thermal refined. without their gear teeth being induction hardened.
[NOTE 3] Precision grade standard of racks are set by KHK. Please see “Precision of Racks” in Selection Hints section for details.
[NOTE 4] “Duracon (R)” is a registered trademark of Polyplastics Co., Ltd. in Japan as well as other countries.

● **KHK stock racks have round semi-topping at the corners of the top land of the gear tooth.**
● **Black products are KHK stock gears that have an applied black oxide coating for rust resistance.**

Application Examples

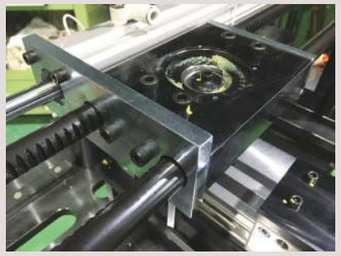
KHK stock racks & pinions are adopted in driving devices for all kinds of linear motion systems, including transport devices.

■ Circular saw cutting machine HS-400 manufactured by Kooki Co., Ltd.



SRFD racks and SSG spur gears used for automatic and manual drive for cutting, machining of both ends and deburring

■ Clamp Seamer Welder



The SRCPFD racks and SSCP spur gears used to drive weld torches at constant speed, and the SRO round racks and SS spur gears used to position workpieces

■ Automatic packaging machine manufactured by Toyota Machinery Co., Ltd.

SUR stainless steel rack used for film winding tension part

■ Dremax Long Strip Cutter

PR plastic rack used for feeding Long Strip Cutter

■ Lathe Auto Loader

SRO Round Rack used as a workpiece storage device (lifting/lowering table)

■ Lathe Gantry Loader

KRG Ground Rack used as a workpiece conveying device

Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable “CAUTION” notes shown below before the final selection.

1. Caution in Selecting the Mating Gears

① With the exception of helical racks, KHK stock racks can mate with any spur gears of the same module. Products with different tooth width can also be mated as a pinion.
② See the table on the right for the mating gears of the helical racks.
Be sure to check the combination of helix direction (right or left) when selecting.

■ Mating Helical Gear Selection Chart (○ Allowable × Not allowable)

Catalog Number and Direction of Helix		KRHG KRHGF		ZST ZSTD	SRHEF	SRH/SRHF SRHFD	
		RH	LH	RH	RH	RH	LH
KHG	LH	○	×	×	×	×	×
	RH	×	○	×	×	×	×
ZSTP	LH	×	×	○	○	×	×
SHE	LH	×	×	○	○	×	×
SH	LH	×	×	×	×	○	×
	RH	×	×	×	×	×	○

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions.

■ Calculation of Bending Strength of Gears

Item \ Catalog Number	MRGF MRGFD	KRGF-H KRGFD-H KRF-H KRFD-H	KRG/KRGF KRGFD KRHG/KRHGF KRHGFD/KRF KRFD	SRG/SRGF SRGFD/SRGFK SRF-H/SRFD-H ZST/ZSTD	SRF-HL SRFD-HL	SRAF/SRAFD SRAFK/SR/SRF SRFD/SRFK/SRO SROS/SRH/SRHF SRHFD/SRHEF	SUR SURF SURFD SURO	BSR	Pinion SHE	Pinion ZSTP	Racks DRF DRFD DRFK	Racks PR PRF	Racks DR
Formula NOTE 1	Formula of spur and helical gears on bending strength (JGMA401-01)										The Lewis formula		
No. of teeth of mating gears	30 Note 2									Racks	(30)		
Rotational Speed of Pinion	100rpm										(100rpm)		
Design Life (Durability)	Over 10^7cycles										Allowable bending stress (kgf/mm²)		
Impact from motor	Uniform load										1.0 (40°C with No Lubrication)	1.15 (40°C with No Lubrication)	*m* 0.8 4.0 *m* 1.0 3.5 *m* 1.5 1.8 NOTE 4 *m* 2.0 1.2 (40°C with Grease Lubrication)
Impact from load	Uniform load												
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)												
Allowable bending stress at root σ_{Flim} (kgf/mm²)	47	32	20 NOTE 3				10.5	4	19	30			
Safety factor S_F	1.2												

■ Calculation of Surface Durability (Except where it is common with bending strength)

Formula NOTE 1	Formula of spur and helical gears on surface durability (JGMA402-01)									
Kinematic viscosity of lubricant	100cSt(50°C)									
Gear support	Supported on one end.									
Allowable Hertz stress σ_{Hlim} (kgf/mm²)	166	112	79	90 NOTE 3	80	52.5	41.3	-	49	112
Safety factor S_H	1.15									

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications, “MC Nylon Technical Data” by Mitsubishi Chemical Advanced Materials and “Duracon (R) Gear” by Polyplastics Co. The units for the rotational speed (rpm) and the stress (kgf/mm²) are adjusted to the units needed in the formula.
[NOTE 2] No. of mating teeth in the ZST and ZSTD racks is the “minimum number of teeth” of the ZSTP pinion. The No. of mating teeth in the SRHEF racks is also calculated by the “minimum number of teeth” of the SHE pinion.
[NOTE 3] For SRG, or SRGF Ground Racks, with a module less than *m*0.8, the allowable bending stress and allowable hertz stress are respectively 24.5 (kgf/mm²) and 62.5 (kgf/mm²).
[NOTE 4] The values for DR *m* 1.5 racks were assumed by KHK. Usage conditions for SSDR (DR Rack Pinion) are the same for the SSCP Pinion, shown on Page 269.

When selecting KHK standard gears, glance over the Cautions on Product Characteristics and Cautions on Performing Secondary Operations on Page 216.

① Products not listed in this catalog or materials, modules, number of teeth and the like not listed in the dimensional tables can be manufactured as custom items. Please see Page 26 for more details about custom-made orders.
② The color and shape of the product images listed on the dimension table page of each product may differ from the actual product. Be sure to confirm the shape in the dimension table before selection.
③ The details (specifications, dimensions, etc.) listed in the catalog may be changed without prior notice. Changes are announced on the KHK website.

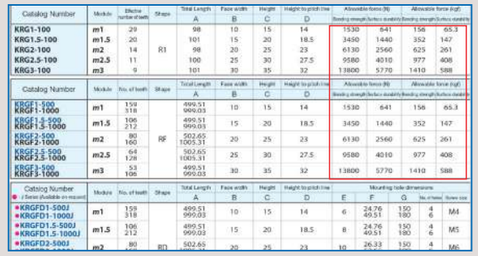
Overseas Sales Department: Phone: +81-48-254-1744 Fax: +81-48-254-1765 E-mail: info@khkgears.net

Selecting the Gears

Step 1 Determine the calculated load torque applied to the gear and the gear type suitable for the purpose.

Step 2 Select provisionally from the allowable torque table in this catalog based on the load torque.

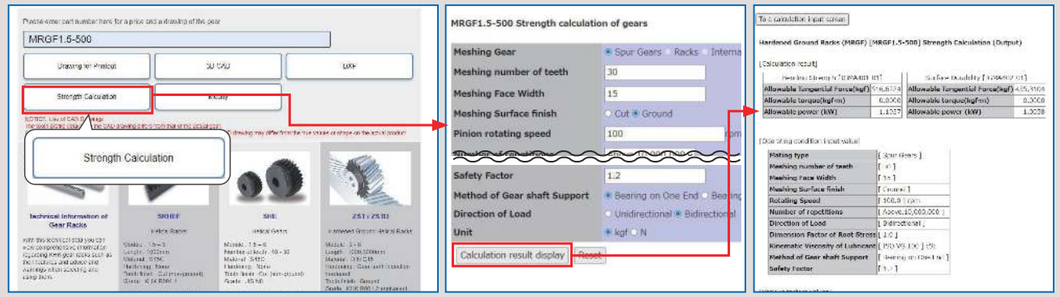
■ For provisional selection from this catalog



Step 3 Calculate the strength under the actual usage conditions.

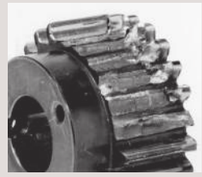
Calculate the strength formally using the various gear strength formulas. Please see our separate technical reference book for more details. We recommend using the Website that allows the strength to be easily calculated.

■ Use the strength calculation function on our website.



■ Bending strength

Calculated values of the strength at which the gear teeth do not break due to fatigue.



Example of failure due to insufficient bending strength

■ Surface durability

Calculated values of the strength at which the gear teeth do not wear due to surface fatigue damage.

Example of wear due to insufficient surface durability

Product Precautions

Common Notes

[Caution on Product Characteristics]

(1) The allowable forces shown in the table are calculated values according to the assumed usage conditions. Please see Page 214 for more details.
(2) The backlash values shown in the table are the theoretical values for the backlash in the circumferential direction of recommended pinions with the same pitch.
(3) There is a decarburized layer on the surface, so 0.5mm or so will not be at the specified hardness.
(4) After attaching the racks to the base, fasten with dowel pins. Clamping only with mounting screws could possibly cause the screws to be broken, due to a heavy load.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 221 when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Up to 20 units can be handled; for larger orders, please request a price and delivery quote.
(3) Black oxide is not re-applied to parts undergoing secondary operations.

MRGF Hardened Ground Racks

[Caution on Secondary Operations]

(1) In the illustration, the area surrounded with —·—·— line is masked during the carburization process (max. HRC40 or so) and can be modified.

KRF-H Hardened Racks

[Caution on Product Characteristics]

(1) The dimensions may vary widely due to hardening. Therefore, the total composite error is excluded from the rack accuracy table on Page 219.

SRF-H Hardened Racks

[Caution on Product Characteristics]

(1) The dimensions may vary widely due to hardening. Therefore, the total composite error is excluded from the rack accuracy table on Page 219.

SRF-HL Laser Hardened Racks

[Caution on Secondary Operations]

(1) Due to the gear teeth being laser hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 1 mm).

SRFD Steel Racks with Bolt Holes

[Caution on Secondary Operations]

(1) Avoid hardening racks with bolt holes, due to mounting hole deformation.

SUR(F,D) Stainless Steel Racks

[Caution on Product Characteristics]

(1) The stainless steel material is given solution treatment and passivation.

DRF(D,K) Plastic Racks

[Caution on Product Characteristics]

(1) Boiling sterilization is not required when using this product in food machines. Note that POM plastic complies with the Food Sanitation Law of the US Food and Drug Administration (FDA), and boiling or exposing it to steam will cause the material to be damaged.

Product Precautions

PR(F) Plastic Racks

[Caution on Product Characteristics]

(1) These plastic racks expand and contract depending on the temperature and humidity. The length per 1m changes by 0.45 mm when the temperature changes by 10°C, and about 5 mm with water absorption of 2%.The bending is 5 mm or less per 1 m, but may exceed 5 mm over time in products with total length 1000 mm. Mount for use while correcting along the gear cutting reference surface (bottom).

SRO(S) Round Racks

[Caution on Product Characteristics]

(1) Because this is extruded material, the outer diameter may be out of H9 tolerance in parts.

[Caution on Secondary Operations]

(1) Avoid hardening round racks, due to twisting and deformation occurring and the difficulty of straightening the rack after hardening.

SURO Stainless Steel Racks

[Caution on Product Characteristics]

(1) Because this is extruded material, the outer diameter may be out of H9 tolerance in parts.

DR Molded Flexible Racks

[Caution on Product Characteristics]

(1) When using the DR flexible rack in an arc, the minimum bending radius (R) is 150 mm for both the external and internal teeth. This increases the pitch errors and tooth profile errors which prevent the teeth from meshing at the normal center distance, so be sure to make adjustments before use.
(2) It cannot be used where positioning accuracy is required.
(3) For the dimensional tolerance of each part, see the dimensional tolerance of molded items in the separate table.

SRS Rack Clamps

[Caution on Product Characteristics]

(1) M4 x 12 pan head machine screws with cross holes are included.
(2) The set includes a rack clamp and 10 machine screws.

KRHG(F,D) Ground Helical Racks

[Caution on Product Characteristics]

(1) For the helical gear series combinations, see the Mating Gear Selection Chart on Page 190.
(2) These bevel gears produce axial thrust forces. Please see Page 193 for more details.

SRH(F) Helical Racks

[Caution on Product Characteristics]

(1) For the helical gear series combinations, see the Mating Gear Selection Chart on Page 190.
(2) These bevel gears produce axial thrust forces. Please see Page 193 for more details.

SRHFD Helical Racks

[Caution on Product Characteristics]

(1) For the helical gear series combinations, see the Mating Gear Selection Chart on Page 190.
(2) These bevel gears produce axial thrust forces. Please see Page 193 for more details.

[Caution on Secondary Operations]

(1) Avoid hardening racks with bolt holes, due to mounting hole deformation.

SRHEF Helical Racks

[Caution on Product Characteristics]

(1) For the helical gear series combinations, see the Mating Gear Selection Chart on Page 190.
(2) These bevel gears produce axial thrust forces. Please see Page 193 for more details.
(3) For the assembly joining gauge, use ZST-GL on Page 264.

SHE Helical Gears

[Caution on Product Characteristics]

(1) The backlash values shown in the table are the theoretical values for the backlash in the circumferential direction of SRHEF Helical Racks with the same pitch.

ZST(D) Hardened Ground Helical Racks

[Caution on Product Characteristics]

(1) For the helical gear series combinations, see the Mating Gear Selection Chart on Page 190.
(2) These bevel gears produce axial thrust forces. Please see Page 193 for more details.

ZSTP Ground Helical Gears

[Caution on Product Characteristics]

(1) The backlash values shown in the table are the theoretical values for the backlash in the circumferential direction of ZST Helical Racks with the same pitch.

[Caution on Secondary Operations]

(1) Because of the influence of hardening residual stress, avoid removing the entire boss, as it may cause the gears to deform.

3. Cautions on Selecting Racks By Precision

The precision standards of KHK stock racks are established by us.
The table below indicates the tolerance ranges of our racks.

① Pitch Errors of Racks (KHK R 001)

Our precision grades for pitch errors are established by referring to old JIS Standards. The precision grades are set from 1 to 8, in accordance with the tolerance of a single pitch error (S.P.E.), adjacent tooth-to-tooth error (T.T.E.), and the total composite error (T.C.E.) for each module and length.

■ Precision Grades of Racks

Unit: μ m

Grade	Pitch Error	Over *m*0.4 to 1 CP2.5		Over *m*1 to 1.6 CP5		Over *m*1.6 to 2.5 -		Over *m*2.5 to 4 CP10		Over *m*4 to 6 CP15		Over *m*6 to 10 CP20	
		Rack Length (nominal)											
		1000 or less	1001 up to 2000	1000 or less	1001 up to 2000	1000 or less	1001 up to 2000	1000 or less	1001 up to 2000	1000 or less	1001 up to 2000	1000 or less	1001 up to 2000
1	S.P.E.	10	-	10	12	11	12	11	13	13	14	14	16
	T.C.E.	28	-	29	33	30	35	32	37	35	40	40	45
2	S.P.E.	14	-	14	17	15	17	16	18	18	20	20	23
	T.C.E.	39	-	41	48	43	49	46	53	50	57	58	64
3	S.P.E.	20	-	20	24	21	25	23	26	25	29	29	32
	T.C.E.	56	-	57	67	60	70	64	74	71	80	81	91
4	S.P.E.	28	-	29	33	30	35	32	37	35	40	40	45
	T.C.E.	79	-	81	95	85	99	91	105	100	115	115	130
5	S.P.E.	39	-	41	48	43	49	46	53	50	57	58	64
	T.C.E.	110	-	115	135	120	140	130	145	140	160	160	180
8	S.P.E.	206	206	212	212	219	219	-	-	-	-	-	-

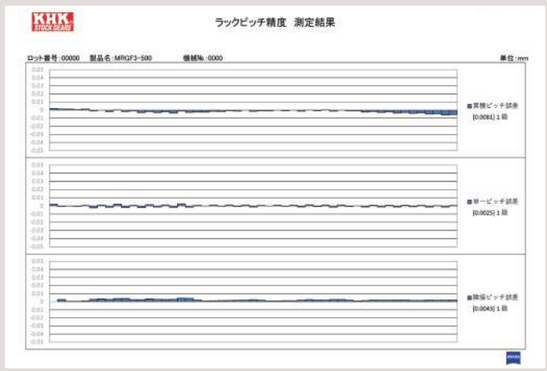
[NOTE] ① Since the pitch accuracy of racks may vary due to humidity, the precision grades are evaluated at the bottom surface of the product, at the temperature of 20°C. The dimensions of the KHK PR Plastic Racks may vary widely due to humidity. Therefore, the total composite error is assumed to be excluded from this accuracy standard.
② For the accuracy of CP Rack, convert CP to *m* (module) when reference is made to the data in the table. (*m*=CP/ π).

■ Comparison Table of Precision Grades of Racks

KHK R001	1	2	3	4	5	6	7	8
DIN 3962	Q5	Q6	Q7	Q8	Q9	Q10	Q11	Q12

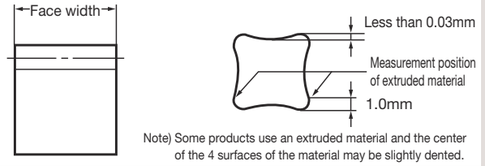
* Values in the table are guidelines only and not guaranteed values.
* In the gray area, there are no equivalent products for stock gears.

■ Pitch inspection and a sample report using Karl Zeiss ACCURA Coordinate Measuring Machine. (KHK R 001 Grade 1)



② Precision of Rack Blanks

■ Tolerances for Face Width and Height



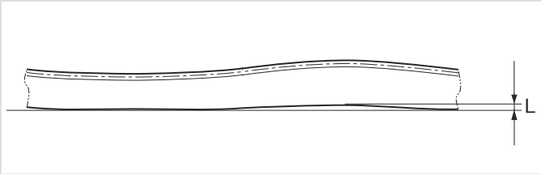
Note) Some products use an extruded material and the center of the 4 surfaces of the material may be slightly dented.

Unit: mm

Face width \ Precision grade (KHK R 001)	Grade 1	Grade 2	Grades 3 to 5
8 or less	0 -0.05	0 -0.10	0 -0.22
9 to 10		0 -0.10	0 -0.27
11 to 18		0 -0.10	0 -0.33
19 to 30		0 -0.15	0 -0.39
31 to 50		0 -0.15	0 -0.46
51 to 90		0 -0.15	0 -0.46

[NOTE] Dimensional tolerance of hardened products is that prior to hardening. Dimensional tolerance for plastic racks is the value obtained when machining is performed, and may increase slightly due to aging.
* BSR products are not applicable.

■ Maximum Curvature Values (Flatness Tolerance L)



Unit: mm

Length (nominal) \ Precision grade (KHK R 001)	Grade 1 & 2	Grade 3	Grade 4 & 5
500	0.05	0.1	0.2
1000	0.1	0.2	0.3
1500	—	—	0.3
2000	—	—	0.4

[NOTE] The straightness tolerances of round racks are 0.15/500 mm and 0.2/1000 mm.
Plastic racks change over time so are excluded from this precision standard.

■ Tolerance on Total Length

Unit: mm

Product Type	Module	Dimensional Tolerance
F Type End Machined Product	*m*0.5	$\begin{pmatrix}-0.1\\-0.3\end{pmatrix}$
	*m*0.8(CP2.5)	$\begin{pmatrix}-0.1\\-0.5\end{pmatrix}$
	*m*1 up to 2.5	$\begin{pmatrix}-0.2\\-0.6\end{pmatrix}$
	*m*2.5 or more	$\begin{pmatrix}-0.2\\-0.8\end{pmatrix}$
FRCP and DR Flexible Racks	Uniform	±10
Products other than the above	Uniform	+3 -2

[NOTE] For Type-F racks with machined ends, the dimensional tolerance is a calculated value according to assumed usage conditions, without consideration of pitch errors and aged deterioration.

③ Backlash of Racks & Pinions

■ Backlash of Racks & Pinions (Circumferential)

Application Hints

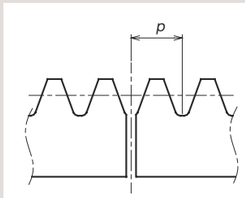
In order to use KHK stock racks safely, carefully read the Application Hints before proceeding. If there are questions or you require clarifications, please contact our technical department or your nearest distributor.
E-mail info@khkgears.net

1. Cautions on Handling

① KHK products are packaged one by one to prevent scratches and dents, but if you find issues such as rust, scratches, or dents when the product is removed from the box after purchase, please contact the supplier.
② Depending on the handling method, the product may become deformed or damaged. Long racks and plastic racks deform particularly easily, so please handle with care.

2. Caution on Performing Secondary Operations

① Secondary operations can be performed on all KHK stock racks except for the racks with their gear teeth induction hardened. To avoid problems of gear precision, do not reduce the face width.
② Height of pitch lines of racks are controlled by measuring the bottom surface as the reference datum and over-pin measurements on tooth thickness. If you machine the bottom surfaces, the precision of the racks may be affected.
③ When connecting two racks, the machining of the mating ends requires careful consideration in terms of the pitch (*p*) accuracy. The meshing will be poor if the pitch straddling the connection has a positive tolerance. We recommend a minus tolerance on pitch of at the connection.
The below is an indication of pitch tolerance for each module.



$p = \pi \cdot m$
p : Reference pitch
π : Pi
m : Module

Unit: mm

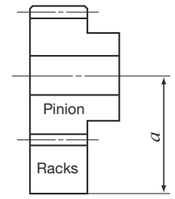
Module	Pitch (*p*)	Tolerance
*m*0.5	1.57	-0.05 -0.15
*m*0.8	2.51	-0.05 -0.25
*m*1	3.14	-0.1 -0.3
*m*1.5	4.71	
*m*2	6.28	
*m*2.5	7.85	-0.1 -0.4
*m*3	9.42	
*m*4	12.57	
*m*5	15.71	
*m*6	18.85	
*m*8	25.13	
*m*10	31.42	

④ To use dowel pins to secure racks, attach the racks to the base and drill both simultaneously.
⑤ Products made of S45C and SCM440 can be induction hardened. However, the precision is decreased. There is a decarburized layer (about 0.5 mm) on the block surface. The hardness of the decarburized layer does not increase even if it is quenched.
⑥ To be able to handle parts safely, all burrs and sharp corners. should be removed after the secondary operations are done.
⑦ If you are going to modify the gear by gripping the teeth, please exercise caution not to crush the teeth by applying too much pressure.

3. Points of Caution during Assembly

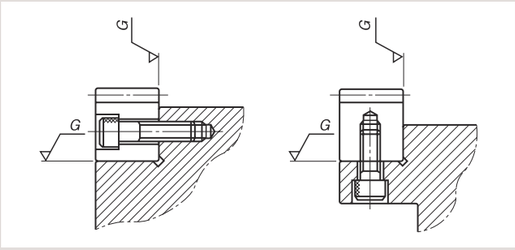
① The recommended assembly distance tolerance of KHK stock racks is H7 for ground racks and H8 for cut racks. Flexible racks need to be adjusted by the customer. The backlash values are given in the table on Page 220. Make sure that the mounting distance stays constant for the length of the rack.

Mounting distance *a* = Height of pitch line of rack + Pitch radius of pinion



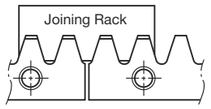
[NOTE] Pinions are assumed to be standard stock spur gears (x=0).

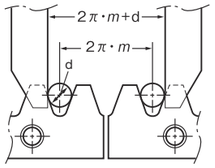
② The recommended flatness and squareness of the mounting surface of KHK stock racks is 0.01 mm for ground racks and 0.05 mm for cut racks.



③ If the racks are not secured properly to the base, they could shift during operation and cause unexpected problems.
It is very important to insure firm mounting by the use of dowel pins or similar devices.
④ Machined end type racks such as SRF and SRFD series have smaller pitch tolerance at the end face. If you try to connect the racks without any space, the pitch at the connection will be too small and will cause problems. Please follow the diagrams for assembly on the next page.
⑤ With SRFD etc., if using more than 10 racks connected together to form a rack with mounting holes machined along a length of 1 meter, the pitch precision and machining precision may cause the rack and base mounting holes to deviate, leading to set screw interference with the counterbored hole and preventing mounting. When using a rack for long lengths such as 10 meters or 20 meters, have the mounting holes additionally machined into long holes.

As an example of Rack Joining, we recommend the following method.

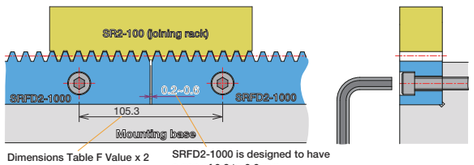




[NOTE] Joining gauge racks for helical racks must have the opposite hand from the racks. Please use 100 mm short racks as a joining gauge rack, or alternatively the rack of the same specifications on hand.

How to mount racks on a mounting base (For SRFD2-1000)

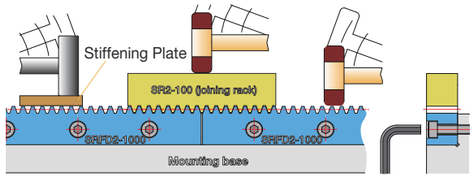
1. Pitch alignment
Place SRFD2-1000 on the mounting base, align SR2-100 and temporarily tighten the bolt.



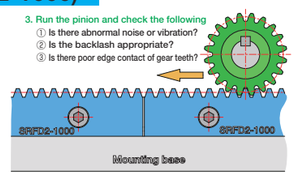
Dimensions Table F Value x 2

SRFD2-1000 is designed to have a gap of 0.2 to 0.6 mm.

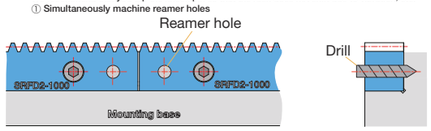
2. Securing to the mounting base
Tap with a plastic hammer, bring it into close contact with the mounting base, and further tighten the bolt. (When using a metal hammer, be careful not to damage the gear teeth by using a stiffening plate, etc.)



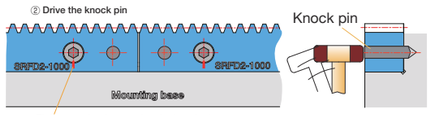
3. Run the pinion and check the following
① Is there abnormal noise or vibration?
② Is the backlash appropriate?
③ Is there poor edge contact of gear teeth?



4. Secure fixation to the mounting base
We recommend that you tap the knock pin so that the rack does not shift due to vibration, etc.
① Simultaneously machine reamer holes



② Drive the knock pin



Tighten again after tapping the knock pin.
It can be marked with a pen to find looseness.

4. Cautions on Starting

① Check the following items before starting.
- Are the gears installed securely?
- Is there uneven tooth contact?
- Is there adequate backlash? (Be sure to avoid zero-backlash.)
- Has proper lubrication been supplied?

② If gears are exposed, be sure to attach a safety cover to ensure safety. Also, be careful not to touch rotating gears.

③ If there is any abnormality such as noise or vibration during startup, stop the operation immediately and check the assembly condition such as tooth contact, eccentricity and looseness.

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

⚠ Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
   ① Turn off the power switch.
   ② Do not reach or crawl under the product.
   ③ Wear appropriate clothing and protective equipment for the work.

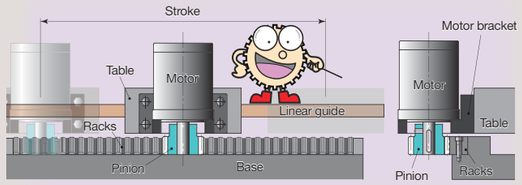
⚠ Caution Cautions in Preventing Accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

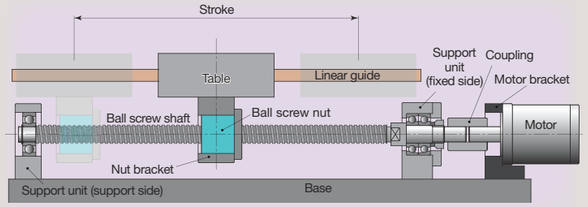
Comparison of Racks & Pinions and Ball Screws

Since racks have a simple mechanism, the material, hardening, strength and precision can be designed according to the environment. They are also inexpensive, with parts that can be purchased separately for replacement.
In the designing process, please refer to Features of Racks & Pinions and Ball Screws in the table below.

■ Racks & Pinions



■ Ball screw



● Features of Racks & Pinions

Advantages	Details
Few component parts	Since it does not have parts such as balls and retainers, there is less risk of accidentally falling apart during assembly and disassembly.
Supports heavy loads	Racks with large module can be used for heavy loads.
High transmission efficiency	High transmission efficiency of about 98% (excluding lubrication oil stirring resistance and bearing resistance).
High transport speed	The transport speed can be increased.
No length limit	The racks can be connected and used for a long period of time.
Flexible production is available	Materials, hardening, shapes and the like can be designed flexibly, allowing easy adjustment to the machine.
High-precision products can be manufactured	Gear grinding can be provided to minimize pitch error.
Can be used for food-related machinery	MC nylon and stainless steel products can be manufactured.

Disadvantages	Details
Backlash is present	Backlash is required for smooth rotation. Backlash may become a problem in forward/reverse rotation positioning.
Lubrication is required	Metal racks require lubrication. Plastic racks do not require lubrication at light loads, but their precision is lower.

● Features of Ball Screws

Advantages	Details
High transmission efficiency	Transmission efficiency of 90% or higher.
High-precision products can be manufactured	High-precision ball screws can be manufactured by grinding.
No backlash	The use of pressure eliminates backlash.

Disadvantages	Details
Length is limited	There is a limit to the length due to the deflection of the screws.
Hard to manufacture special products	Since it is hard to manufacture special products, machines must be adjusted to the shape of the ball screw.

Laser Hardened Racks

● **Lasers used for hardening gear teeth**
In this environmentally friendly hardening method, powerful light provides instantaneous hardening and cooling water is not required due to diffusion of heat.

● **Can be hardened on surfaces other than the teeth**
Lasers excel at spot hardening. As long as the laser can be irradiated, even the inside of bores can be hardened.

● **Less distortion due to burning during hardening**
As the laser hardens necessary areas in spots, distortion due to burning can be minimized.

* Please see Page 236 for products.

MRGF/MRGFD Module 1.5~3
Hardened Ground Racks

Specifications	
Precision grade	KHK R 001 Grade 1 *
Gear teeth	Standard full depth
Pressure angle	20°
Material	SCM415
Heat treatment	Tooth area carburized
Tooth hardness	55 to 60HRC

* The precision grade of J Series products is equivalent to the value shown in the table.

Precautions for Standard Machined Products → Pages 38~40

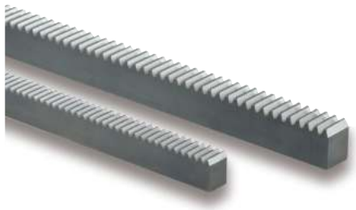
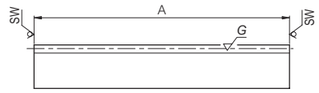
SRG/SRGF/SRGFD/SRGFK

Hardened Ground Racks



Specifications	
Precision grade	KHK R 001 Grade 3 *
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened **
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth

* The precision grade of J Series products is equivalent to the value shown in the table.
** Products with module less than 0.8 are not gear teeth hardened.
It is a tempered product with the teeth hardness of 200 to 270 HB.



SW: Sawing surface

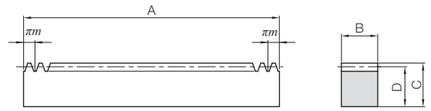
Laser Hardened Racks

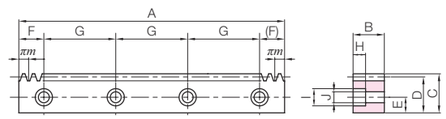
Specifications	
Precision grade	KHK R 001 Grade 4 *
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth laser hardened
Tooth hardness	55 to 65HRC
Surface treatment	Black oxide coating

* The precision grade of these products is equivalent to the value shown in the table.



RF

J Series



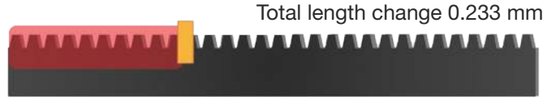
RD

* Total length change just 1/12 compared to induction hardening! These hardened racks have minimal deformation due to heat treatment.

Laser hardened total length change

With induction hardening

Total length change 0.233 mm



With laser hardening

Total length change 0.019 mm

* This is a measurement of the total length change (cumulative pitch) when induction hardening and laser hardening are applied to SRF3-1000.

Recommended Mating Pinions

SS-H Hardened Spur Gears

Please see Page 106 for more details.

Thermal Refined Racks

Specifications	
Precision grade	KHK R 001 Grade 4 *
Gear teeth	Standard full depth
Pressure angle	20°
Material	SCM440
Heat treatment	Thermal refining only
Tooth hardness	225 to 352HB
Surface treatment	Black oxide coating

* The precision grade of J Series products is equivalent to the value shown in the table.

SS Spur Gears

Please see Page 104 for more details.

SRF Module 0.5~10 Steel Racks with Machined Ends

Specifications	
Precision grade	KHK R 001 grade 4
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than HB210)
Surface treatment	Black oxide coating

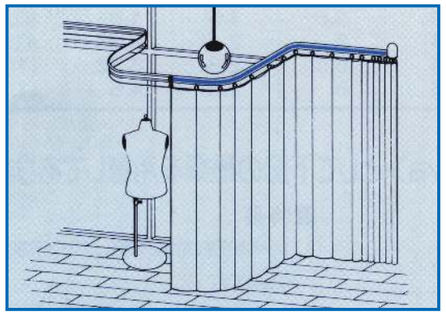
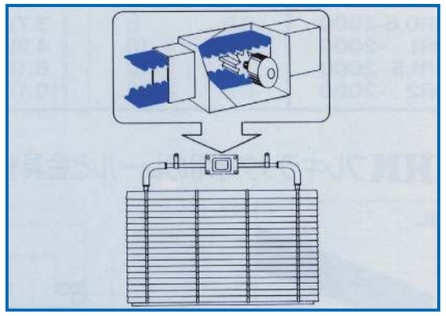
* Molded flexible racks of 2 meters or longer are also available by request as custom-made products.
(Only the length can be changed, up to 50 m)

Applications for DR Molded Flexible Racks

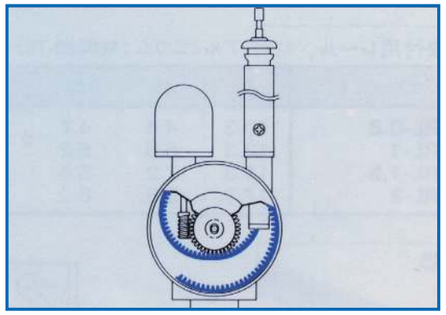
As it is possible to fix the position of the pinion and bend the DR molded flexible racks into any shape, they can be used for special purposes.



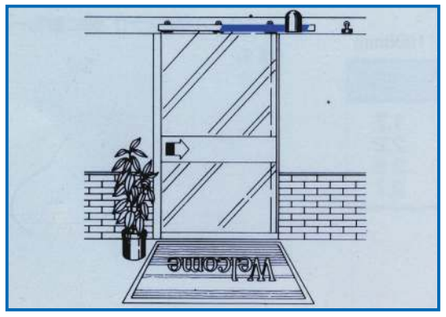
Electric curtain



Electric blinds



Electric antenna



Automatic doors

DR dedicated SRS

Rack Clamps

You can download CAD data (DXF format) of KHK Products from the Website.

Specifications	
Precision grade	KHK R 001 grade 5
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Normal pressure angle	20°
Helix angle	15°
Material	S45C
Heat treatment	—
Tooth hardness	(less than HB210)
Surface treatment	Black oxide coating

ZST/ZSTD EU Specification Hardened Ground Helical Racks

Specifications	
Precision grade	DIN3962, 3963, 3967 Grade Q6*
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Pressure angle	20°
Helix angle/ direction	19° 31' 41" right helix
Material	DIN C45 (JIS S45C equivalent)
Heat Treatment	Gear teeth induction hardened
Tooth hardness	HRC55 to 60

* Equivalent to KHK R 001 Grade 2. The precision grade of J Series products is equivalent to the value shown in the table.

Material: S45C
Accuracy: KHK R 001 Grade 2

Please see Page 264 in the Master Catalog for more details.

ZSTP Modules 2~6 (CP6.667~20) EU Specification Ground Helical Gears

Specifications	
Precision grade	JIS B 1702-1:1998 Grade N6
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Pressure angle	20°
Helix angle/ direction	19° 31' 41" left helix
Material	SCM440
Heat treatment	Thermal refined, gear teeth induction hardened
Tooth hardness	HRC50 to 60
Surface treatment	Black oxide coated except for ground part
Shape	S1

* The precision grade of J Series products is equivalent to the value shown in the table.

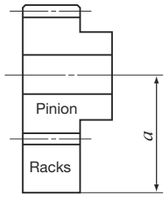
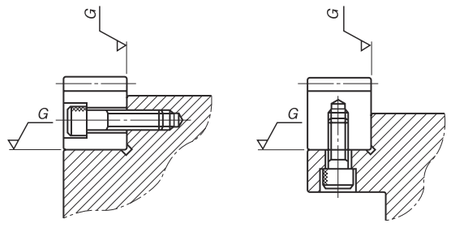
Points of Caution in Assembling

① ZST/ZSTD ground racks are designed to give the proper backlash when assembled using the mounting distance (tolerance of H7 to H8 required) given by the ZSTP Mating Pinion Dimension Table (Page 262). Make sure that the mounting distance stays constant for the length of the rack.

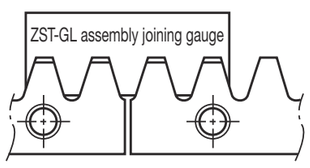


② Machined end type racks such as the ZST and ZSTD Series have pitch tolerance of -0.05 to -0.4mm at the end face. If you try to connect the racks without any space, the pitch at the connection will be too small and will cause problems. Please follow the following diagrams, “Connecting the Racks,” for assembly.

③ The ZST/ZSTD type of KHK stock ground racks have four surfaces ground parallel with high precision. To maintain true angle, they should be mounted on high precision bases (within 10 μ m recommended) as shown below. It is even possible to correct for the angular errors of racks by compensating the mounting base. With recent increases in the requirement for zero backlash linear drives, such accurate assembly as shown is becoming more important. If the racks are not secured properly to the base, they could shift during operation and cause unexpected problems. It is very important to insure firm mounting by the use of dowel pins or similar devices. Please see Page 222 for more details.



Connecting the Racks



[NOTE] Please use the ZST-GL assembly gauge for the joining rack.

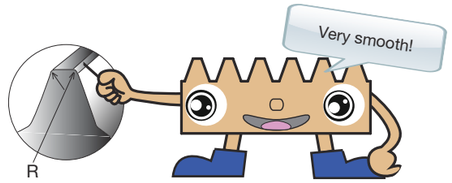
M Includes Made to Order



Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Racks

S R CP 5 - 100

- Total Length (100mm)
- Circular pitch (5)
- Type (Rack)
- Material (S45C)

Material

M	SCM415
K	SCM440
S	S45C
SU	Stainless Steel
F	SS400

Type

R	Racks
RO	Round Racks
S	Spur Gears
TR(TS)	Tapered Racks (Spur Gears)

Other Information

F	Racks with Machined Ends
D	Racks with Bolt Holes
K	Racks with Drill Holes
G	Ground Gears
H	Gear teeth induction hardened
S	Pinion Shafts
HL	Laser hardened

Features

The KHK stock CP racks & pinions are easy-to-use racks with clear pitch.
For your convenience, we offer circular pitches of 2.5 to 20 mm and in lengths of up to 2000 mm. (FRCP is available to 4000 mm)

■ Racks

Catalog Number Note 1	Pitch mm	Total Length mm Parentheses show no. of teeth	Material	Heat Treatment	Tooth Surface Finish	Gear accuracy KHK R 001 Parentheses show JIS B 1702-1	Features
STRCPF STRCPFD	5, 10	1000	S45C	—	Cut	4	Racks with tapered helix with adjustable backlash.
MRGCPF MRGCPFD	5, 10	500	SCM415	Tooth area carburized	Ground	1	CP racks that have been carburized and ground that have excellent accuracy, strength and wear resistance. Secondary operations are possible except for teeth.
KRGCPF-H KRGCPFD-H	5, 10	500, 1000	SCM440	Thermal refined, gear teeth induction hardened	Ground	1	CP racks that have been tempered, hardened and ground that have excellent accuracy, strength and wear resistance. Secondary operations are possible except for teeth.
KRGCP/KRGCPF KRGCPFD	5, 10	100, 500, 1000	SCM440	Thermal refined	Ground	1	CP racks that have been tempered and ground that have excellent accuracy and strength.
SRGCP/SRGCPF SRGCPFD	5, 10, 15, 20	100, 500, 1000	S45C	Gear teeth induction hardened	Ground	3	Racks that have been hardened and ground with a good balance of accuracy, wear resistance and cost. Secondary operations are possible except for teeth.
KRCPF-H KRCPFD-H	5, 10	1000	SCM440	Thermal refined, gear teeth induction hardened	Cut	5	CP racks that have been tempered and hardened that have excellent strength and wear resistance. Secondary operations are possible except for teeth.
SRCPF-H SRCPFD-H	5, 10, 15, 20	1000	S45C	Gear teeth induction hardened	Cut	5	CP racks that have been hardened with excellent wear resistance. Secondary operations are possible except for teeth.
SRCPF-HL SRCPFD-HL	5, 10, 15, 20	1000, 1500, 2000	S45C	Gear teeth laser hardened	Cut	4	CP racks that have been laser hardened with a good balance of wear resistance and cost. Secondary operations are possible except for teeth.
KRCPF/KRCPFD	5, 10	500, 1000	SCM440	Thermal refined	Cut	4	CP racks that have been tempered with excellent strength.
SRCP/SRCPF SRCPFD/SRCPFK	2.5, 5, 10, 15, 20	100, 500, 1000, 1500, 2000	S45C	—	Cut	4	Many lineups are available at a low price and excellent usability.
SURCPF SURCPFD	5, 10	500, 1000	SUS304	Solution treated	Cut	5	Stainless steel CP racks with rust resistance.
SROCP	2.5, 5, 10	500, 1000	S45C	—	Cut	4	CP round racks that are suitable when the rack side moves.
FRCP	5	2000, 3000, 4000	SS400	—	Cut	8	Thin CP racks that can be bent.

■ Pinion

KTSCP	5, 10	(20~40)	SCM440	Thermal refined	Cut	(N8)	STRCPF pinion with adjustable backlash.
KSCPG	5, 10	(20~40)	SCM440	Thermal refined, gear teeth induction hardened	Ground	(N6)	CP gears that have been tempered, hardened and ground that has excellent accuracy, strength and abrasion resistance. Recommended for pinions of ground CP racks Secondary operations are possible except for teeth.
SSCPGS	5, 10	(10~25)	S45C	Thermal refined, gear teeth induction hardened	Ground	(N7)	CP gears with shafts that have been tempered, hardened and ground. Secondary operations can be given except for the teeth. This product is ideal for the pinion of the SRGCPF rack.
SSCPG	5, 10, 15, 20	(20~40)	S45C	Gear teeth induction hardened	Ground	(N7)	CP gears that have been hardened and ground. Secondary operations can be given except for the teeth. This product is ideal for the pinion of the SRGCPF rack.
KSSCP	5, 10	(20~40)	SCM440	Thermal refined	Cut	(N8)	Tempered gears with excellent bending strength that can be given secondary operations. The teeth can be additionally hardened. This product is ideal for the pinion of the KRCPF rack.
SSCP	2.5, 5, 10, 15, 20	(20~40)	S45C	—	Cut	(N8)	Available at a low price. The teeth can be additionally hardened. This product is ideal for the pinion of the SRCP and SROCP racks.
SUSCP	5, 10	(20~30)	SUS303	—	Cut	(N8)	Stainless steel CP gears with rust resistance. This product is ideal for the pinion of the SURCPF rack.

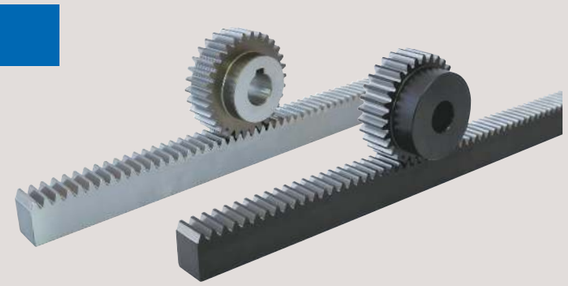
[NOTE 1] The catalog numbers of the above racks with (F) suffix have both ends machined so that they can be butted against each other. The items with (D) have mounting screw holes for immediate assembly.

● KHK stock CP racks have round semi-topping at the corners of the top land of the gear tooth.
● Black products are KHK stock CP gears that have an applied black oxide coating for rust resistance.

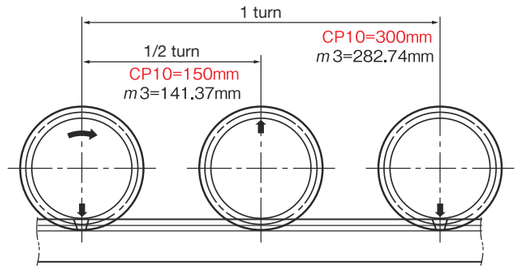
CP racks & pinions are ideal for linear positioning.

CP Racks & Pinions

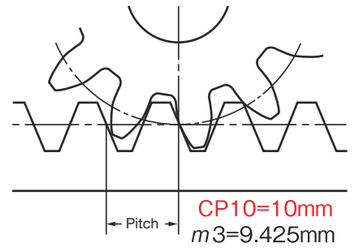
The design can be made easier by setting the moving length of one rotation of a pinion to an integer (mm). Circular pitch racks solve these problems. This problem is solved by CP racks and pinions where one rotation of a pinion moves it precisely 50, 100, 150, ... 600 mm, etc. The following table lists the main features.



■ Movement of one cycle of the CP10-30 pinion vs SS3-30.



■ Difference between CP10 and *m*3



STRCPF/STRCPFD & KTSCP

Taper Racks & Pinions

* For product details, please see Page 274.

■ Features of Tapered Racks & Pinions

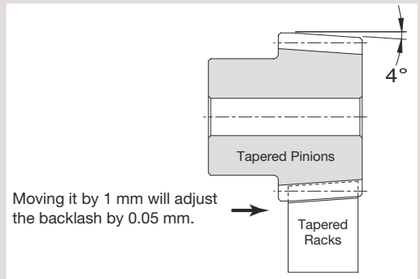
· Easy to adjust the backlash
Normally, the backlash is adjusted by the mounting distance (height of pinion shaft), but for KHK Tapered Racks & Pinions, it can simply be adjusted by moving the pinion mounting position in the axial direction.

· Backlash within 0.05 mm
The backlash of the conventional stock racks & pinions (SRCP5-1000 & SSCP 5-30) is 0.09 to 0.25 mm, but KHK Tapered Racks & Pinions (STRCPF5-1000 & KTSCP5-30) are manufactured within 0.05 mm.

· Thrust load is not applied
As with ordinary racks & pinions, KHK Tapered Racks and Pinions can be used without worrying about the thrust load.
Pinions are CP spur gears that are continuously shifted in the helix direction.

■ Assembly and backlash adjustment method

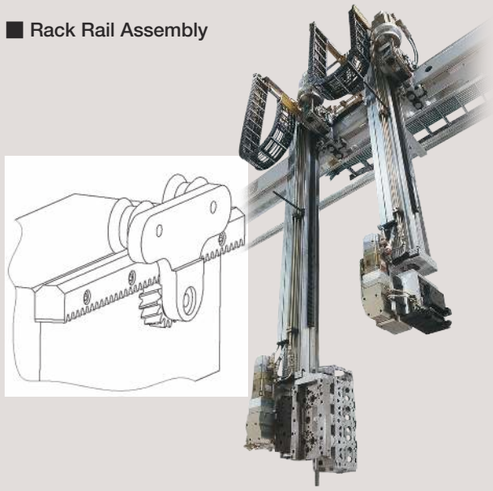
· Assemble at the mounting distance of the theoretical value at the reference tooth position of the racks & pinions.
For the mounting distance and backlash, see the dimension table of the tapered spur gear.
· The backlash can be adjusted by moving the tapered spur gear in the axial direction. Moving it by 1 mm will adjust the backlash by 0.05 mm.
· When the tapered spur gear is pushed to the large end of the rack, the backlash is reduced.
Conversely, retracting it will increase the backlash.



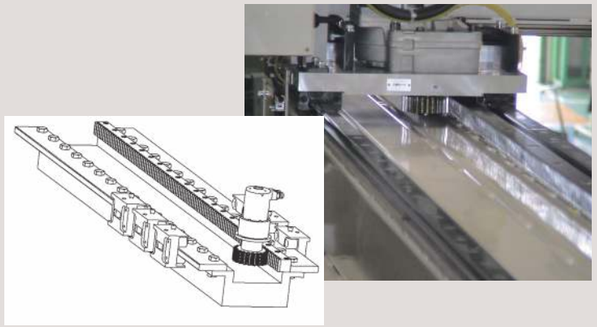
Application Examples

KHK stock CP racks & pinions are adopted in driving devices for all kinds of linear systems, including transport devices.

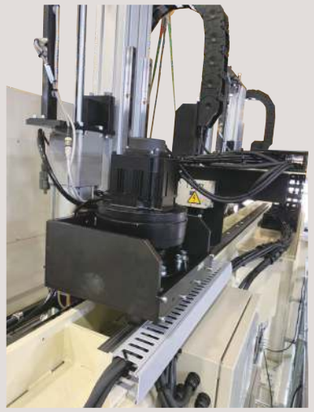
■ Rack Rail Assembly



■ Rack Drive Linear Guide



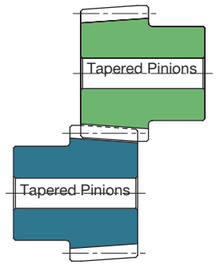
■ Cleaning machine manufactured by Kan Manufactory Co., Ltd.



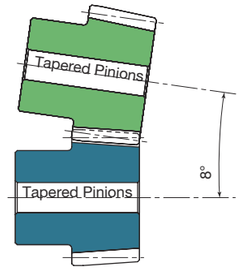
SRCPF-H racks and SSCP spur gears used in cleaning device with automatic transport for automobile parts

■ Examples of using tapered spur gears

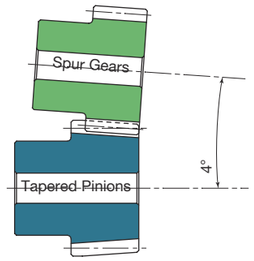
Changing the assembly direction of the tapered spur gear or assembling it with a general spur gear will allow it to be used at the axial angle shown below.



When the boss is set in the opposite direction, the axial angle is 0° (parallel shaft).



When the boss is set in the same direction, the axial angle is 8°.



When the taper spur gear and general spur gear are set, the axial angle is 4°.

Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable notes shown below before the final selection.

1. Caution in Selecting the Mating Gears

① KHK stock CP racks are mated with CP spur gears having the same pitch. Since CP2.5 (m0.796), CP5 (m1.592) and CP10 (m3.183) are very close in size to m0.8, m1.5 and m3 respectively, selecting the proper mating gear should be verified to make sure that the items are correct. Otherwise, complications could arise.

② STRCPF and STRCPFD Tapered CP Racks are mated with KTSCP Tapered CP Spur Gears having the same pitch.

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions. The table below contains the assumptions established for various products in order to compute gear strengths.

■ Calculation of Bending Strength of Gears

Item \ Catalog Number	Racks: MRGCPF MRGCPFD	KRGCPF-H KRGCPFD-H KRCPF-H KRCPFD-H	KRGCP KRGCPF KRGCPFD KRCPF KRCPFD	SRGCP SRGCPF SRGCPFD SRCPF-H SRCPFD-H	SRCPF-HL SRCPFD-HL	SRCP/SRCPF SRCPFD SRCPFK SROCP STRCPF STRCPFD	SURCPF SURCPFD	FRCP	Pinion: MSCPG	KSCPG	SSCPGS	SSCPG	KTSCP	KSSCP	KSSCP-H	SSCP	SSCP-H	SUSCP
Formula NOTE 1	Formula of spur and helical gears on bending strength (JGMA401-01)																	
No. of teeth of mating gears	30								Racks									
Rotational Speed of Pinion	100rpm																	
Design Life (Durability)	Over 10^7 cycles																	
Impact from motor	Uniform load																	
Impact from load	Uniform load																	
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)																	
Allowable bending stress at root σ_{Flim} (kgf/mm²)	47	32	32	20	20	20	10.5		47	30	24.5	19	28.5	32	32	19	19	10.5
Safety factor S_F	1.2																	

■ Calculation of Surface Durability (Except where it is common with bending strength)

Formula NOTE 1	Formula of spur and helical gears on surface durability (JGMA402-01)																	
Kinematic viscosity of lubricant	100cSt (50°C)																	
How to support pinions	Supported on one end.																	
Allowable Hertz stress σ_{Hlim} (kgf/mm²)	166	112	79	90	80	52.5	41.3	-	166	112	99	90	74.5	79	112	49	90	41.3
Safety factor S_H	1.15																	

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications.
The units for the rotational speed (rpm) and the stress (kgf/mm²) are adjusted to the units needed in the formula.

3. Cautions on Selecting Racks By Precision

The precision standards of KHK stock racks are established by us.
The table below indicates the tolerance ranges of our racks.

① Pitch Error of Racks (KHK R 001) → Page 219
② Precision of Rack Blanks → Page 220
③ Backlash of Rack Teeth → Page 220

When selecting KHK standard gears, glance over the Cautions on Product Characteristics and Cautions on Performing Secondary Operations on Page 270.

① Products not listed in this catalog or materials, modules, number of teeth and the like not listed in the dimensional tables can be manufactured as custom items. Please see Page 26 for more details about custom-made orders.
② The color and shape of the product images listed on the dimension table page of each product may differ from the actual product. Be sure to confirm the shape in the dimension table before selection.
③ The details (specifications, dimensions, etc.) listed in the catalog may be changed without prior notice. Changes are announced on the KHK website.

Website URL: https://khkgears.net/new/
Overseas Sales Department: Phone: +81-48-254-1744 Fax: +81-48-254-1765 E-mail: info@khkgears.net

Product Precautions

CP Rack Common Notes

[Caution on Product Characteristics]

(1) The allowable forces shown in the table are calculated values according to the assumed usage conditions. Please see Page 269 for more details.
(2) The backlash values shown in the table are the theoretical values for the backlash in the circumferential direction of recommended pinions with the same pitch.
(3) There is a decarburized layer on the surface, so 0.5mm or so will not be at the specified hardness.
(4) After attaching the racks to the base, fasten with dowel pins. Clamping only with mounting screws could possibly cause the screws to be broken, due to a heavy load.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 272 when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Black oxide is not re-applied to parts undergoing secondary operations.

CP Spur Gears Common Notes

[Caution on Product Characteristics]

(1) The allowable torque shown in the table are calculated values according to the assumed usage conditions. Please see Page 269 for more details.
(2) The backlash values shown in the table are the theoretical values for the backlash in the circumferential direction of recommended mating racks with the same pitch.
(3) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.
(4) For products having a tapped hole, a set screw is included.
(5) For hole lengths 3.5x the bore or more, the hole center is out of H7 tolerance.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 48 when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).
(3) See Page 22 for more details on Hardened Plus (H Series and HJ Series).

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Certain products which would otherwise have a very long tapped hole are counterbored. For details, please see the KHK website.
(3) Black oxide is not re-applied to parts undergoing secondary operations.
(4) For bores over ϕ 50, the bore tolerance is H8.

STRCPF(D) CP Tapered Racks

[Caution on Product Characteristics]

(1) When connecting the racks for use, correctly adjust the joint pitch with identical products at hand or with an SRCP □ -100 rack product of the same pitch. See "Points of Caution in Assembling" on Page 272 for details.

[Caution on Secondary Operations]

(1) Avoid hardening racks with bolt holes, due to mounting hole deformation.

SSCPGS CP Ground Spur Pinion Shafts

[Caution on Product Characteristics]

(1) For the center distance of the profile shifted gear, please refer to "Center distance of stock spur gear meshing with profile shifted gear" on Pages 56~57.

MRGCPF(D) CP Hardened Ground Racks

[Caution on Secondary Operations]

(1) In the illustration, the area surrounded with ———— line is masked during the carburization process (max. HRC40 or so) and can be modified.

KRCPF(D)-H CP Hardened Racks

[Caution on Product Characteristics]

(1) The dimensions may vary widely due to hardening. Therefore, the total composite error is excluded from the rack accuracy table on Page 219.

SRCPF(D)-H CP Hardened Racks

[Caution on Product Characteristics]

(1) The dimensions may vary widely due to hardening. Therefore, the total composite error is excluded from the rack accuracy table on Page 219.

SRCPF(D)-HL CP Laser Hardened

[Caution on Secondary Operations]

(1) Due to the gear teeth being laser hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 1 mm).

SRCPFD CP Racks

[Caution on Product Characteristics]

(1) Avoid hardening racks with bolt holes, due to mounting hole deformation.

SURCPF(D) CP Stainless Steel Racks

[Caution on Product Characteristics]

(1) The stainless steel material is given solution treatment and passivation.

SROCP CP Round Racks

[Caution on Product Characteristics]

(1) Because this is extruded material, the outer diameter may be out of H9 tolerance in parts.

[Caution on Secondary Operations]

(1) Avoid hardening round racks, due to twisting and deformation occurring and the difficulty of straightening the rack after hardening.

FRCP CP Metal Flexible Racks

[Caution on Product Characteristics]

(1) When using the metal flexible rack in an arc, the minimum bending radius (R) is 150 mm for both the external and internal teeth. This increases the pitch errors and tooth profile errors which prevent the teeth from meshing at the normal center distance, so be sure to make adjustments before use.
(2) The tolerance of height (size C) is 0 to -0.15, and the tolerance of base width (size F) is 0 to -0.1.
(3) It cannot be used where positioning accuracy is required.

Application Hints

In order to use KHK stock CP racks safely, carefully read the Application Hints before proceeding. If there are questions or you require clarifications, please contact our technical department or your nearest distributor.

E-mail: info@khkgears.net

1. Cautions on Handling

① KHK products are packaged one by one to prevent scratches and dents, but if you find issues such as rust, scratches, or dents when the product is removed from the box after purchase, please contact the supplier.

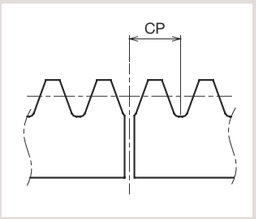
② Depending on the handling method, the product may become deformed or damaged. Long racks and round racks deform particularly easily, so please handle with care.

2. Caution on Performing Secondary Operations

① Secondary operations can be performed on all KHK stock CP racks except for the racks with their gear teeth induction hardened. To avoid problems of gear precision, do not reduce the face width.

② Height of pitch lines of racks are controlled by the bottom surface as the reference datum and over-pin measurements on tooth thickness. If you machine the bottom surfaces, the precision of the racks may be affected.

③ When connecting two racks, the machining of the mating end pitch (CP) requires careful consideration. The meshing will be poor if the pitch straddling the connection has a positive tolerance. We recommend a minus tolerance on pitch of at the connection. The below is an indication of pitch tolerance for each module.



Unit: mm

CP	Tolerance
CP2.5	-0.05 -0.25
CP5	-0.1 -0.3
CP10	-0.1 -0.4
CP15	
CP20	

④ To use dowel pins to secure racks, attach the racks to the base and drill both simultaneously.

⑤ KHK stock CP racks made of S45C and SCM440 (except for ground racks) can be induction hardened. However, the precision of pitch is decreased.

⑥ To be able to handle parts safely, all burrs and sharp corners. should be removed after the secondary operations are done.

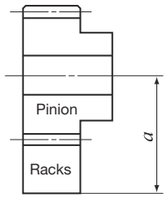
⑦ If you are going to modify the gear by gripping the teeth, please exercise caution not to crush the teeth by applying too much pressure. Any scarring will cause noise during operation.

⑧ There is a decarburized layer (about 0.5 mm) on the surface of the extruded products. The hardness of the decarburized layer does not increase even if it is quenched.

3. Points of Caution during Assembly

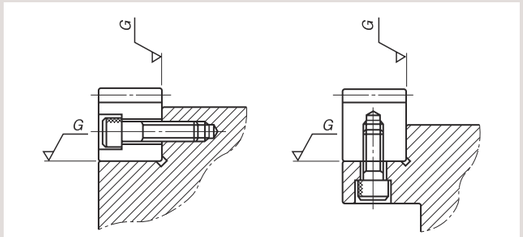
① The recommended assembly distance tolerance of KHK stock CP racks is H7 for ground racks and H8 for cut racks.
The backlash values are given in the table on Page 220. Make sure that the mounting distance stays constant for the length of the rack.

Mounting distance a = Height of pitch line of rack + Pitch radius of pinion



[NOTE] Pinions are assumed to be standard stock spur gears (x=0).

② The recommended flatness and squareness of the mounting surface of KHK stock CP racks is 0.01 mm for ground racks and 0.05 mm for cut racks.

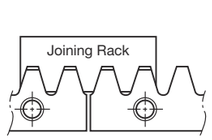


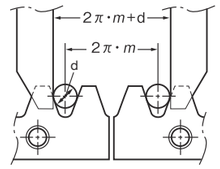
③ If the racks are not secured properly to the base, they could shift during operation and cause unexpected problems.
It is very important to insure firm mounting by the use of dowel pins or similar devices.

④ Machined end type racks such as SRCPF and SRCPFD series have smaller pitch tolerance at the end face. If you try to connect the racks without any space, the pitch at the connection will be too small and will cause problems. Please follow the following diagrams for assembly.

⑤ With SRCPFD etc., if using more than 10 racks connected together to form a rack with mounting holes machined along a length of 1 meter, the pitch precision and machining precision may cause the rack and base mounting holes to deviate, leading to set screw interference with the counterbored hole and preventing mounting. When using a rack for long lengths such as 10 meters or 20 meters, have the mounting holes additionally machined into long holes.

As an example of Rack Joining, we recommend the following method.

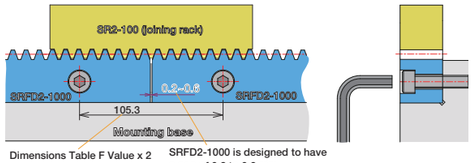




[NOTE] Joining gauge racks for helical racks must have the opposite hand from the racks. Please use 100 mm short racks as a joining gauge rack, or alternatively the rack of the same specifications on hand.

How to mount racks on a mounting base (For SRFD2-1000)

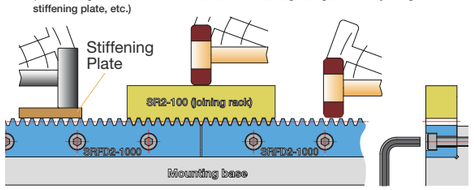
1. Pitch alignment
Place SRFD2-1000 on the mounting base, align SR2-100 and temporarily tighten the bolt.



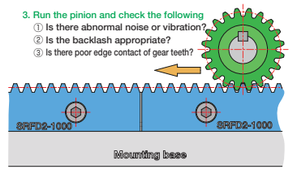
Dimensions Table F Value x 2

SRFD2-1000 is designed to have a gap of 0.2 to 0.6 mm.

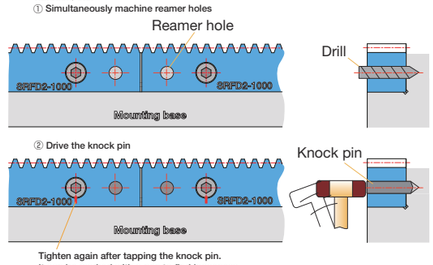
2. Securing to the mounting base
Tap with a plastic hammer, bring it into close contact with the mounting base, and further tighten the bolt.
(When using a metal hammer, be careful not to damage the gear teeth by using a stiffening plate, etc.)



3. Run the pinion and check the following
① Is there abnormal noise or vibration?
② Is the backlash appropriate?
③ Is there poor edge contact of gear teeth?



4. Secure fixation to the mounting base
We recommend that you tap the knock pin so that the rack does not shift due to vibration, etc.
① Simultaneously machine reamer holes



② Drive the knock pin

Tighten again after tapping the knock pin.
It can be marked with a pen to find looseness.

4. Cautions on Starting

① Check the following items before starting.
- Are the gears installed securely?
- Is there uneven tooth contact?
- Is there adequate backlash?
(Be sure to avoid zero-backlash.)
- Has proper lubrication been supplied?

② If gears are exposed, be sure to attach a safety cover to ensure safety. Also, be careful not to touch rotating gears.

③ If there is any abnormality such as noise or vibration during startup, stop the operation immediately and check the assembly condition such as tooth contact, eccentricity and looseness.

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
① Turn off the power switch.
② Do not reach or crawl under the product.
③ Wear appropriate clothing and protective equipment for the work.

Caution: Cautions in Preventing Accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Miter Gears

M MS G 2 - 20 R

- R — Direction of Helix (Right)
- 20 — No. of Teeth (20)
- 2 — Module (2)
- G — Other Products (Ground Gears)
- MS — Type (Spiral Miter)
- M — Material (SCM415)

Material

S	S45C
M	SCM415
SU	Stainless Steel
L	Sintered Metal Alloy
P	MC901
D	Polyacetal

Type

M	Straight Miter Gears
MS	Spiral Miter Gears
AM	Angular Miter Gears

Other Information

G,GQ	Ground Gears

Features

Miter gears are a special class of bevel gears where the shafts intersect at 90° and the gear ratio is 1:1.
KHK stock miter gears are available in two types, straight miter and spiral miter, with high precision grade for demanding torques and speeds, and commercial grade for economical applications. The following table lists the main features for easy selection.

Type	Catalog Number	Module	No. of Teeth ( ) Shaft Angle	Material	Heat Treatment	Tooth Surface Finish	Precision JIS B 1704: 1978	Secondary Operations	Features
Spiral Miter Gears	**MMSGQ**	2~4	20, 30	SCM415	Carburized Note 1	Ground	0	△	Gears that have been hardened and ground that has grade-0 accuracy, strength, abrasion resistance and quietness. Secondary operations can be given except for the teeth.
	MMSG	2~4	20, 25, 30	SCM415	Carburized Note 1	Ground	1	△	Gears that have been hardened and ground that has excellent accuracy, strength and abrasion resistance. Secondary operations can be given except for the teeth.
	SMSG	1~5	20, 25, 30	S45C	Gear teeth induction hardened	Ground	2	△	Gears that have been hardened and ground that has excellent abrasion resistance. Secondary operations can be given except for the teeth.
	KSP	1.5~6	20~30	SCM415	Carburized Note 1	Ground	0	△	Gears that have been hardened and ground that has grade-0 accuracy, strength, abrasion resistance and quietness. Secondary operations can be given except for the teeth.
	MMSA/MMSB	1~10	20	SCM415	Carburized	Cut	4	×	Gears that have been fully hardened that have excellent strength and wear resistance. Can be used in the finished shape.
	MMS	2~5	20, 25, 30	SCM415	Carburized Note 1	Cut	4	△	Gears that have been hardened that have excellent strength and wear resistance. Secondary operations are possible except for the teeth.
	SMS	1~5	20, 25, 30	S45C	Gear teeth induction hardened	Cut	4	△	Gears that have been hardened with excellent wear resistance. Secondary operations are possible except for the teeth.
Straight Miter Gears	**SMA/SMB/ SMC**	1~8	20, 25, 30	S45C	Gear teeth induction hardened	Cut	4	△	Gears that have been hardened with excellent wear resistance. Can be used in the finished shape.
	MM	2~5	20, 25, 30	SCM415	Carburized Note 1	Cut	4	△	Gears that have been hardened that have excellent strength and wear resistance. Secondary operations are possible except for the teeth.
	LM	0.8~1.5	20	SMF5040 (S45C equivalent)	—	Sintered	5	○	Small gears made through sintering.
	SM	1~8	16, 20, 25, 30	S45C	—	Cut	3	○	Many lineups are available. The teeth can be additionally hardened.
	SAM	1.5~3	20 (45°, 60°, 120°)	S45C	—	Cut	3	○	3 types of angular miter are available for shafts at 45°, 60° and 120°.
	SUM	1~4	20, 25, 30	SUS303	—	Cut	3	○	Stainless steel gears with rust resistance.
	SUMA	1~4	20, 25	SUS303	—	Cut	3	△	Stainless steel gears with rust resistance. Keyways and tapping provided.
	PM	1~4	20, 25, 30	MC901	—	Cut	4	○	Nylon gears can be used with no lubrication.
	DM	0.5~1.5	20	Duracon (R) (M90-44) NOTE 2	—	Injection Molded	6	△	Low-priced gears made through injection molding. Suitable for light loads.

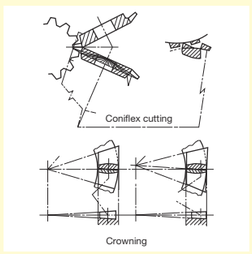
○ Possible △ Partly possible × Not possible

[NOTE 1] Although these are carburized products, secondary operations can be performed as the bore and the hub portions are masked during the carburization. However, note that high hardness (HRC40 at maximum) occurs in some cases.

[NOTE 2] "Duracon (R)" is a registered trademark of Polyplastics Co., Ltd. in Japan as well as other countries.

We use the Crowning method for gear cutting

KHK utilizes Gleason Coniflex No.104 and 114 bevel gear generating machinery, and is equipped for mass production of straight miter gears. You can count on a stable supply of straight miter gears from KHK



Gleason Coniflex No.104

Application Examples

KHK stock bevel gears (miter gears) are adopted in driving devices for all kinds of intersecting axes, including transport devices.

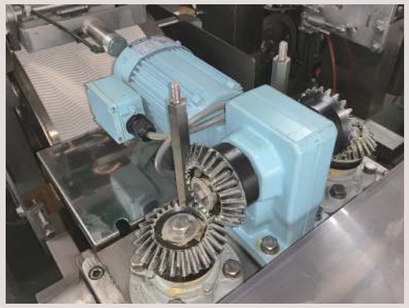
■ Masdac Dorayaki Machine

SM miter gears used for reversing fabrics

■ Carton former

SM and SMB miters used to drive X/Y axes and transmit mechanical power

■ Fish processing machine manufactured by TOYO SUISAN KIKAI CO.,LTD.



SMB miter used for filleting fish

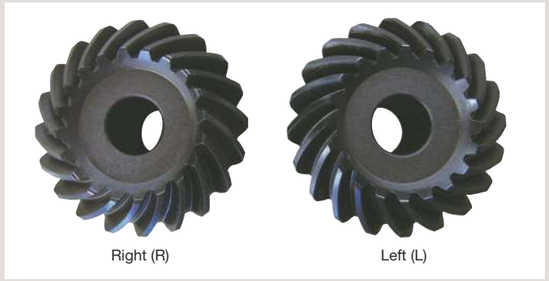
■ Angular Miter Gear Box

Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable “CAUTION” notes shown below before the final selection.

1. Caution in Selecting the Mating Gears

Among KHK stock miter gears, there are products which are not interchangeable even when the module and the number of teeth are the same. Also, spiral miters require additional consideration since the right-hand mates with the left-hand spiral as shown in the table below.



Right (R) Left (L)

■ Straight Miter (○ Allowable × Not allowable)

Catalog Number	SMA SMB SMC	MM	SM	SUM	SUMA	PM	DM	LM	SAM
SMA/SMB/SMC	○	○	○	○	○	○	×	×	×
MM	○	○	○	○	○	○	×	×	×
SM	○	○	○	○	○	○	×	×	×
SUM	○	○	○	○	○	○	×	×	×
SUMA	○	○	○	○	○	○	×	×	×
PM	○	○	○	○	○	○	×	×	×
DM	×	×	×	×	×	×	○	×	×
LM	×	×	×	×	×	×	×	○	×
SAM	×	×	×	×	×	×	×	×	○

■ Spiral Miter (○ Allowable × Not allowable)

Catalog Number	Series	MMSGQ	MMSG	SMSG	MMSA MMSB	MMS	SMS
Series	Direction of spiral	R	R	R	R	R	R
MMSGQ	L	○	×	×	×	×	×
MMSG	L	×	○	×	×	×	×
SMSG	L	×	×	○	×	×	×
MMSA/MMSB	L	×	×	×	○	×	×
MMS	L	×	×	×	×	○	×
SMS	L	×	×	×	×	×	○

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions.

■ Calculation of Bending Strength of Gears

Item \ Catalog Number	MMSGQ,MMSG MMSA,MMSB MMS,MM	SMSG/SMS SMA/SMB/ SMC	SM SAM	SUM SUMA LM NOTE 2	PM	DM
Formula NOTE 1	Formula of bevel gears on bending strength (JGMA403-01)				The Lewis formula	
No. of teeth of mating gears	Same no. of teeth				—	
Rotational Speed	100rpm (600rpm for MMSGQ, MMSG and SMSG)				100rpm	
Design Life (Durability)	Over 10^7 cycles				—	
Impact from motor	Uniform load				Allowable bending stress (kgf/mm²)	
Impact from load	Uniform load				1.15 (40°C with No Lubrication)	*m* 0.5 4.0 *m* 0.8 4.0 *m* 1.0 3.5 *m* 1.5 1.8 NOTE 2 (40°C with Grease Lubrication)
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)					
Allowable bending stress at root σ_{Flim} (kgf/mm²)	47	21	19	10.5		
Safety factor K_R	1.2					

■ Calculation of Surface Durability (Except where it is common with bending strength)

Formula NOTE 1	Formula of bevel gears on surface durability (JGMA404-01)			
Kinematic viscosity of lubricant	100cSt (50°C)			
Gear support	Shafts & gear box have normal stiffness, and gears are supported on one end			
Allowable Hertz stress σ_{Hlim} (kgf/mm²)	166	90	49	41.3
Safety factor C_R	1.15			

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications, “MC Nylon Technical Data” by Mitsubishi Chemical Advanced Materials and “Duracon (R) Gear” by Polyplastics Co. The units for the rotational speed (rpm) and the stress (kgf/mm²) are adjusted to the units needed in the formula.

[NOTE 2] The values of the allowable bending stresses for DM *m*1.5 gears and the allowable root bending stress for LM gears are our own estimates.

Selecting the Gears

Step 1 Determine the calculated load torque applied to the gear and the gear type suitable for the purpose.

Step 2 Select provisionally from the allowable torque table in this catalog based on the load torque.

■ For provisional selection from this catalog

Catalog Number	Gear Ratio	No. of teeth	Shape	Bore A/O	B	C	D	E	F	G	H	I	J	K	Allowable torque (N·m) Bending strength	Surface durability	Allowable torque (kgf·m) Bending strength	Surface durability	Backla (mm

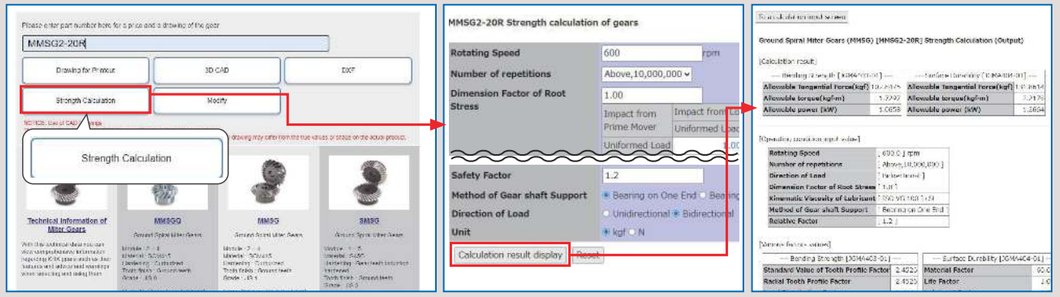
Step 3 Calculate the strength under the actual usage conditions.

Calculate the strength formally using the various gear strength formulas. Please see our separate technical reference book for more details. We recommend using the Website that allows the strength to be easily calculated.

■ Use the strength calculation function on our website.



■ Bending strength

Calculated values of the strength at which the gear teeth do not break due to fatigue.

■ Surface durability;

Calculated values of the strength at which the gear teeth do not wear due to surface fatigue damage.

When selecting KHK standard gears, glance over the Cautions on Product Characteristics and Cautions on Performing Secondary Operations on Page 306.

① Products not listed in this catalog or materials, modules, number of teeth and the like not listed in the dimensional tables can be manufactured as custom items. Please see Page 26 for more details about custom-made orders.

② The color and shape of the product images listed on the dimension table page of each product may differ from the actual product. Be sure to confirm the shape in the dimension table before selection.

③ The details (specifications, dimensions, etc.) listed in the catalog may be changed without prior notice. Changes are announced on the KHK website.

Product Precautions

Common Notes

[Caution on Product Characteristics]

(1) The allowable torque shown in the table are calculated values according to the assumed usage conditions. Please see Page 304 for more details.
(2) The backlash values shown in the table are the theoretical values for the backlash in the normal direction of a pair of identical gears in mesh.
(3) A set of spiral miter gears must be identical in module and number of teeth, but opposite in spiral hands.
(4) Dimensions of the outside diameter, the total length and crown to back length are all theoretical values, and some differences will occur due to the corner chamfering of the gear tips.
(5) These bevel gears produce axial thrust forces. Please see Page 308 for more details.
(6) Variations in temperature or humidity can cause dimensional changes in plastic gears, including tooth diameter, bore, and backlash. The accuracy and tolerances shown in the catalog are values obtained when machining is performed.
(7) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.
(8) For products having a tapped hole, a set screw is included. (excludes B7)

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 308 when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).
(3) In the illustration, the area surrounded with －－－－ line is masked during the carburization process (max. HRC40 or so) and can be modified.

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Certain products which would otherwise have a very long tapped hole are counterbored. For details, please see the KHK website.
(3) Black oxide is not re-applied to parts undergoing secondary operations.
(4) For bores over ϕ 50, the bore tolerance is H8.

MMS(A,B) Finished Bore Spiral Miter Gears

[Caution on Product Characteristics]

(1) The keyway tolerance is the value before hardening.

[Caution on Secondary Operations]

(1) No secondary operations can be performed on these finished gears due to the applied carburizing process.

SMS Spiral Miter Gears

[Caution on Product Characteristics]

(1) The bore may slightly vary due to the effect of heat treatment. When using with the indicated hole diameter, provide machining with a reamer or the like before use.

SM(A,B,C) Finished Bore Miter Gears

[Caution on Product Characteristics]

(1) The dimensions of the keyway marked with * are different from the JIS Standards.

LM Sintered Metal Miter Gears

[Caution on Product Characteristics]

(1) Steam treatment (where the surface is rusted using steam) is provided.
(2) The product is not impregnated with lubricating oil.

SAM Angular Miter Gears

[Caution on Product Characteristics]

(1) The axis angle is where the same products are set together. The axis angle cannot be changed by using it with a different product.

PM Plastic Miter Gears

[Caution on Product Characteristics]

(1) To reduce heat generation, it is recommended to mate them with steel gears.

DM Plastic Miter Gears

[Caution on Product Characteristics]

(1) The bore tolerance is -0.05 to -0.30, but it may be slightly higher at the center of the hole.
(2) For the dimensional accuracy of each part, see the dimensional tolerance of molded items on Page 333.

[Caution on Secondary Operations]

(1) As it is a molded item, bubbles may form inside the material. Avoid performing secondary operations.

Application Hints

In order to use KHK stock miters safely, carefully read the Application Hints before proceeding. If there are questions or you require clarifications, please contact our technical department or your nearest distributor.

E-mail: info@khkgears.net

1. Cautions on Handling

① KHK products are packaged one by one to prevent scratches and dents, but if you find issues such as rust, scratches, or dents when the product is removed from the box after purchase, please contact the supplier.

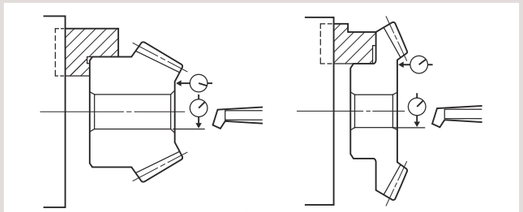
② Depending on the handling method, the product may become deformed or damaged. Resin gears and ring gears deform particularly easily, so please handle with care.

2. Caution on Performing Secondary Operations

① If reboring, it is important to pay special attention to locating the center in order to avoid runout.

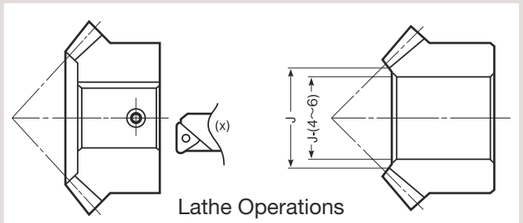
② The reference datum for gear machining is the bore. Therefore, use the bore for locating the center. If it is too difficult to do for small bores, the alternative is to use one spot on the bore and the runout of the side surface.

③ If reworking using scroll chucks, we recommend the use of new or rebored jaws for improved precision. Please exercise caution not to crush the teeth.



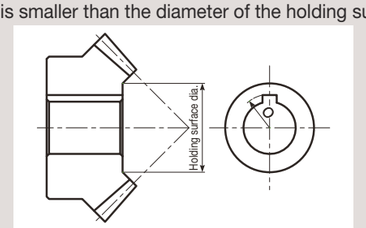
Lathe Operations

④ For items with induction hardened teeth, the hardness is high near the tooth root. When machining the front face, the machined area should be 4 to 6mm smaller than the holding surface diameter dimensions.



Lathe Operations

⑤ For tapping and keyway operations, see the examples given in “Caution on Performing Secondary Operations” in KHK Stock Spur Gear section. When providing keyway operations, to avoid stress concentration, always round the corners. Make sure that the diameter (O) of the keyway angle is smaller than the diameter of the holding surface.

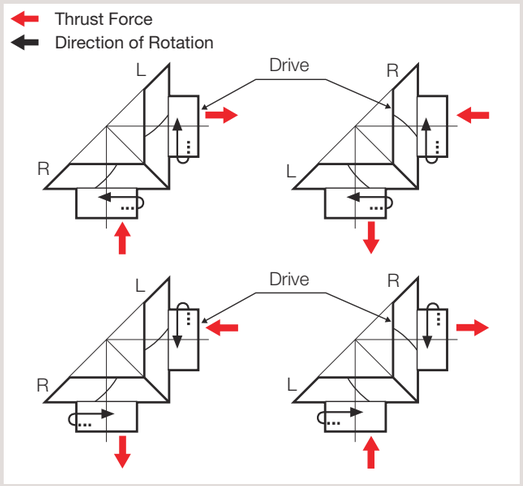


⑥ PM plastic miter gears are susceptible to changes due to temperature and humidity. Dimensions may change between, during, and after re-machining operations.

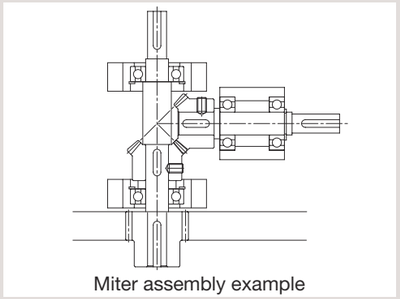
⑦ When induction-hardening S45C products, thermal stress cracks may appear. Also, note that the precision grade of the product declines by 1 or 2 grades, as deformation on material may occur. If you require tolerance for bore or other parts, machining is necessary after heat treatment.

3. Points of Caution during Assembly

① Since miter gears are cone shaped, they produce axial thrust forces. Specifically with regard to spiral miter gears, the directions of thrust change with the hand of helix and the direction of rotation. This is illustrated below. The bearings must be selected properly to be able to handle these thrust forces. For details, use gear calculation software GCSW.



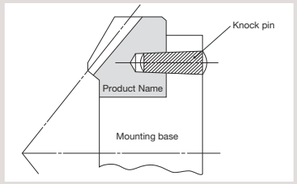
② If a gear is mounted on a shaft far from the bearings, the shaft may bend. We recommend designing bevel gears to be as close to the bearings as possible. Design the gear box, shaft and bearing with high rigidity.



Miter assembly example

③ Be sure to fasten the miter to prevent the gears from moving, as thrust acts on it while rotating.

④ When installing MMSA or MMSB finished bore spiral miter gears produced as B7 style (ring gear), always secure the gears onto the mounting base with taper pins to absorb the rotational loads. It is dangerous to secure with bolts only. (See the top of the right page for reference figure)

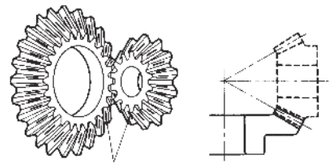


⑤ The recommended assemble distance tolerance of KHK stock miters is H7 for ground gears and H8 for cut gears. Mounting distance error, offset error and shaft angle error must be minimized to avoid excessive noise and wear. Inaccurate assembly will lead to irregular noises and uneven wear. Various conditions of tooth contact are shown below. Also, when changing the normal direction backlash, adjust the mounting distance according to the amount of axial movement shown in the table on the right so as not to change the tooth contact.

Shaft angle (°)	Normal direction Backlash	Travel in axial direction	
		Drive gear	Driven gear
90	j_n	$1.03 \times j_n$	$1.03 \times j_n$
60		$1.46 \times j_n$	$1.46 \times j_n$
120		$0.84 \times j_n$	$0.84 \times j_n$

Correct Tooth Contact

● When assembled correctly, the contact will occur on both gears in the middle of the flank and center of face width but somewhat closer to the toe.

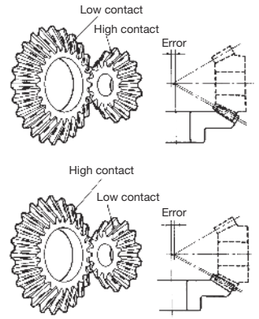


Center contact closer to toes

Incorrect Tooth Contact

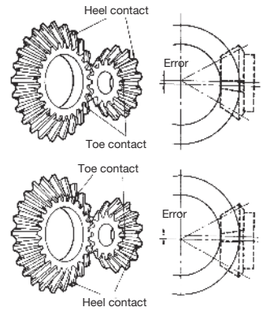
■ Mounting Distance Error

● When the mounting distance of the pinion is incorrect, the contact will occur too high on the flank on one gear and too low on the other.



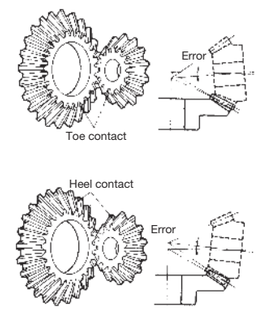
■ Offset Error

● When the pinion shaft is offset, the contact surface is near the toe of one gear and near the heel of the other.



■ Shaft Angle Error

● When there is an angular error of shafts, the gears will contact at the toes or heels depending on whether the angle is greater or less than 90°.



4. Cautions on Starting

① Check the following items before starting.
- Are the gears fastened securely?
- Is there uneven tooth contact?
- Is there adequate backlash?
  (Be sure to avoid zero-backlash.)
- Has proper lubrication been supplied?

② If gears are exposed, be sure to attach a safety cover to ensure safety. Also, be careful not to touch rotating gears.

③ If there is any abnormality such as noise or vibration during startup, stop the operation immediately and check the assembly condition such as tooth contact, eccentricity and looseness.

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
   ① Turn off the power switch.
   ② Do not reach or crawl under the product.
   ③ Wear appropriate clothing and protective equipment for the work.

Caution: Cautions in Preventing Accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

MMSGQ Module 2~4
Ground Spiral Miter Gears NEW

Specifications	
Precision grade	JIS B 1704: 1978 grade 0*
Gear teeth	Gleason
Pressure angle	20°
Helix angle	35°
Material	SCM415
Heat treatment	Tooth area carburized
Tooth hardness	55 to 60HRC

* The precision grade of J Series products is equivalent to the value shown in the table.

Specifications	
Precision grade	JIS B 1704: 1978 grade 2*
Gear teeth	Gleason
Pressure angle	20°
Helix angle	35°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for teeth

* The precision grade of J Series products is equivalent to the value shown in the table.

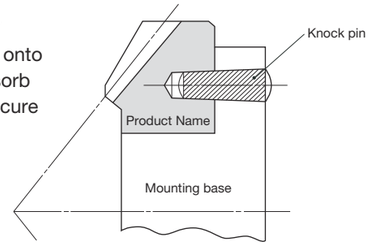
When installing products produced in B7 style (ring type), always secure the gears onto the mounting base with taper pins to absorb the rotational loads. It is dangerous to secure with bolts only.



Product Precautions → Page 306

Specifications	
Precision grade	JIS B 1704: 1978 grade 4
Gear teeth	Gleason
Pressure angle	20°
Helix angle	35°
Material	SCM415
Heat treatment	Tooth area carburized
Tooth hardness	55 to 60HRC
Surface treatment	Black oxide coating

MM Module 2~5 Miter Gears NEW

Specifications	
Precision grade	JIS B 1704: 1978 grade 4
Gear teeth	Gleason
Pressure angle	20°
Material	SCM415
Heat treatment	Tooth area carburized
Tooth hardness	55 to 60HRC
Surface treatment	Black oxide coating

* The precision grade of J Series products is equivalent to the value shown in the table.

Product Precautions → Page 306

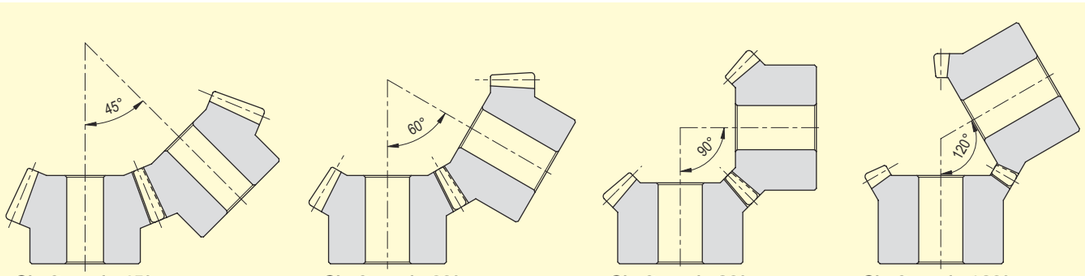
Shaft angle 60°

Shaft angle 120°

■ Angular Miter Gear Box Example

■ Angular miter

The axis angle of a normal miter is set to 90°, but the angle is set arbitrarily for the angular miter. The SAM Angular Miters are products with standardized axial angles of 45°, 60° and 120°. Be sure to pair products with the same model number. Custom items of other shaft angles are available, but may not be manufacturable due to the capabilities of the machine.



Shaft angle 45° Shaft angle 60° Shaft angle 90° Shaft angle 120°

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Bevel Gears

M BS G 2 - 40 20 R

- R — Direction of Helix (Right)
- 20 — No. of teeth of mating gears (20)
- 40 — No. of Teeth (40)
- 2 — Module (2)
- G — Other Products (Ground Gears)
- BS — Type (Spiral Bevel Gears)
- M — Material (SCM415)

Material		Type	
S	S45C	B	Straight Bevel Gears
M	SCM415	BS	Spiral Bevel Gears
SU	Stainless Steel	HP	High-Ratio Hypoid Gears
P	MC901		
D	Polyacetal	**Other Information**	
		G	Ground Gears

Product Precautions → Page 306

Features

KHK stock bevel gears are available in two types, spiral bevel gears and straight bevel gears, in gear ratios of 1.5 through 5, and are offered in a large variety of modules, numbers of teeth, materials and styles. The following table lists the main features for easy selection.

Type	Catalog Number	Module	Gear Ratio	Material	Heat Treatment	Tooth Surface Finish	Precision JIS B 1704: 1978	Secondary Operations	Features
Hypoid Gear	**MHP**	1, 1.5	15~60	SCM415	Carburized Note 1	Cut	3	△	Hypoid gears that have been tempered and hardened that are capable of rapid deceleration.
Spiral Bevel Gears	**MBSG**	2~4	2	SCM415	Carburized Note 1	Ground	1	△	Gears that have been hardened and ground that has excellent accuracy, strength and abrasion resistance. Secondary operations are possible except for the teeth.
	SBSG	2~4	1.5~3	S45C	Gear teeth induction hardened	Ground	2	△	Gears that has been hardened and ground with a good balance of accuracy, wear resistance and cost. Secondary operations are possible except for the teeth.
	KSP	1.5~6	1~2	SCM415	Carburized Note 1	Ground	0	△	Gears that have been hardened and ground that has grade-0 accuracy, strength, abrasion resistance and quietness. Secondary operations can be given except for the teeth.
	MBSA/MBSB	2~6	1.5~3	SCM415	Carburized	Cut	4	×	Gears that have been fully hardened that have excellent strength and wear resistance. Can be used in the finished shape.
	SBS	1~5	1.5~4	S45C	Gear teeth induction hardened	Cut	4	△	Gears that have been hardened with excellent wear resistance. Secondary operations are possible except for the teeth.
Straight Bevel Gears	**SB/SBY**	1~8	1.5~5	S45C	—	Cut	3	○	Many lineups are available at a low price. The teeth can be additionally hardened.
	SUB	1.5~3	1.5~3	SUS303	—	Cut	3	○	Stainless steel gears with rust resistance.
	PB	1~3	1.5~3	MC901	—	Cut	4	○	Nylon gears can be used with no lubrication.
	DB	0.5~1	2	Duracon (R) (M90-44) NOTE 2	—	Injection Molded	6	△	Low-priced gears made through injection molding. Suitable for light loads.

[NOTE 1] Although these are carburized products, secondary operations can be performed as the bore and the hub portions are masked during the carburization. However, note that high hardness (HRC40 at maximum) occurs in some cases.
[NOTE 2] "Duracon (R)" is a registered trademark of Polyplastics Co., Ltd. in Japan as well as other countries.

○ Possible △ Partly possible × Not possible

Application Examples

KHK stock bevel gears are used as gears for power transmission of intersecting axes in various devices.

■ Differential Gear Mechanism Example

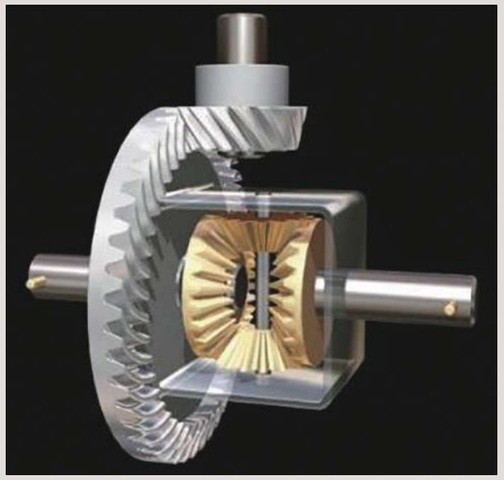

Image provided by: PK Design

■ SHESCO 2WD Bike

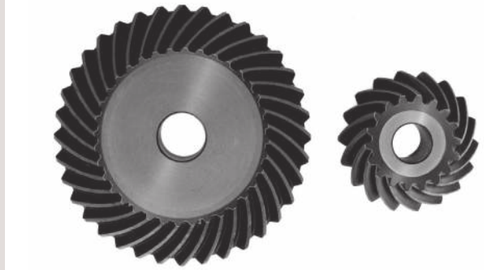
SB Bevel Gears are used in the driving components in both the front and rear wheels

Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable "CAUTION" notes shown below before the final selection.

1. Caution in Selecting the Mating Gears

Basically, KHK stock bevel gears should be selected as shown in the catalog in pairs (e.g. MBSG2-4020R should mate with MBSG2-2040L). But, for straight tooth bevel gears, there is some interchangeability with different series. For plastic bevel gears, we recommend metal mating gears for good heat conductivity.



Right (R) Left (L)

■ Selection Chart for Straight Bevel Gears (○ Allowable × Not allowable)

Pinion \ Gears	SB SBY	SUB	PB	DB
SB·SBY	○	○	○	×
SUB	○	○	○	×
PB	○	○	○	×
DB	×	×	×	○

■ Selection Chart for Spiral Bevel Gears (○ Allowable × Not allowable)

Pinion \ Gears	MBSG	SBSG	MBSA MBSB	SBS
MBSG	○	×	×	×
SBSG	×	○	×	×
MBSA/MBSB	×	×	○	×
SBS	×	×	×	○

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions.

■ Calculation of Bending Strength of Gears

Item \ Catalog Number	MBSG MBSA MBSB	SBSG/SBS	SB NOTE 2 SBY	SUB	PB	DB
Formula NOTE 1	Formula of bevel gears on bending strength (JGMA403-01)				The Lewis formula	
No. of teeth of mating gears	No. of teeth of the mating gear of the set				—	
Rotational Speed of Pinion	100rpm (600rpm for MBSG and SBSG)				100rpm	
Design Life (Durability)	Over 10^7 cycles				—	
Impact from motor	Uniform load				Allowable bending stress (kgf/mm²)	
Impact from load	Uniform load				1.15 (40°C with No Lubrication)	*m* 0.5 4.0 *m* 0.8 4.0 *m* 1.0 3.5 (40°C with Grease Lubrication)
Direction of load	Bidirectional load (calculated with allowable bending stress of 2/3)					
Allowable bending stress at root σ_{Flim} (kgf/mm²)	47	21	19 (24.5)	10.5		
Safety factor K_R	1.2					

■ Calculation of Surface Durability (Except where it is common with bending strength)

Formula NOTE 1	Formula of bevel gears on surface durability (JGMA404-01)			
Kinematic viscosity of lubricant	100cSt (50°C)			
Gear support	Shafts & gear box have normal stiffness, and gears are supported on one end			
Allowable Hertz stress σ_{Hlim} (kgf/mm²)	166	90	49 (62.5)	41.3
Safety factor C_R	1.15			

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications, "MC Nylon Technical Data" by Mitsubishi Chemical Advanced Materials and "Duracon (R) Gear" by Polyplastics Co. The units for the rotational speed (rpm) and the stress (kgf/mm²) are adjusted to the units needed in the formula.
[NOTE 2] Since SB Bevel Pinion Shafts are thermally refined, the allowable tooth-root bending stress and allowable hertz stress are the value shown in parentheses.

Product Precautions

Common Notes

[Caution on Product Characteristics]

(1) The allowable torque shown in the table are calculated values according to the assumed usage conditions. Please see Page 337 for more details.
(2) Dimensions of the outside diameter, the total length and crown to back length are all theoretical values, and some differences will occur due to the corner chamfering of the gear tips.
(3) These bevel gears produce axial thrust forces. Please see Page 340 for more details.
(4) Variations in temperature or humidity can cause dimensional changes in plastic gears, including tooth diameter, bore, and backlash. The accuracy and tolerances shown in the catalog are values obtained when machining is performed.
(5) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.
(6) For products having a tapped hole, a set screw is included. (excludes B7)

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" (Page 340) when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).
(3) In the illustration, the area surrounded with —·—·— line is masked during the carburization process (max. HRC40 or so) and can be modified.

MHP High Ratio Hypoid Gears

[Caution on Product Characteristics]

(1) Radial and thrust load coefficients are the factors used for calculation of those loads.
As shown in the figure B8, CW and CCW stand for clockwise and counterclockwise rotation. A plus sign means that the two gears in a set move away each other when load is applied. A minus sign means that two gears in a set approach each other when load is applied.
Use gear calculation software GCSW.

MBS(A,B) Finished Bore Spiral Bevel Gears

[Caution on Product Characteristics]

(1) The keyway tolerance is the value before hardening.

[Caution on Secondary Operations]

(1) No secondary operations can be performed on these finished gears due to the applied carburizing process.

SBS Spiral Bevel Gears

[Caution on Product Characteristics]

(1) The bore may slightly vary due to the effect of heat treatment. When using with the indicated hole diameter, provide machining with a reamer or the like before use.

SB Bevel Gears

[Caution on Product Characteristics]

(1) For the handling conveniences, the BT series has the tapped holes on the holding surface. Please see Page 340 for L and tap sizes.

SBY Spiral Bevel Gears

[Caution on Product Characteristics]

(1) For the handling conveniences, the BT series has the tapped holes on the holding surface. Please see Page 340 for L and tap sizes.

PB Plastic Bevel Gears

[Caution on Product Characteristics]

(1) To reduce heat generation, it is recommended to mate them with steel gears.

DB Injection Molded Bevel Gears

[Caution on Product Characteristics]

(1) The bore tolerance is -0.05 to -0.30, but it may be slightly higher at the center of the hole.
(2) For the dimensional accuracy of each part, see the dimensional tolerance of molded items on Page 369.

[Caution on Secondary Operations]

(1) As it is a molded item, bubbles may form inside the material. Avoid performing secondary operations.

KSP_U Nissei Ground Spiral Bevel Gears

[Caution on Product Characteristics]

(1) The allowable torque is the value at RPM 600. For other data, see the Transmission Capacity Table.

Application Hints

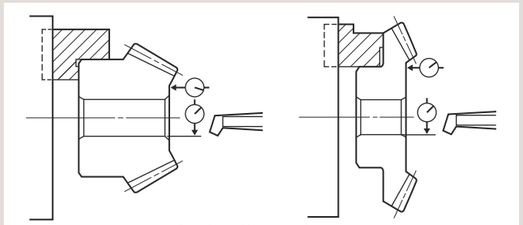
In order to use KHK stock bevel gears safely, carefully read the Application Hints before proceeding.
If there are questions or you require clarifications, please contact our technical department or your nearest distributor.
E-mail: info@khkgears.net

1. Cautions on Handling

① KHK products are packaged one by one to prevent scratches and dents, but if you find issues such as rust, scratches, or dents when the product is removed from the box after purchase, please contact the supplier.
② Depending on the handling method, the product may become deformed or damaged. Plastic gears and ring gears deform particularly easily, so please handle with care.

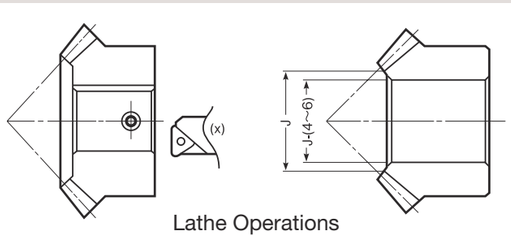
2. Caution on Performing Secondary Operations

① If reboring, it is important to pay special attention to locating the center in order to avoid runout.
② The reference datum for gear machining is the bore. Therefore, use the bore for locating the center. If it is too difficult to do for small bores, the alternative is to use one spot on the bore and the runout of the side surface.
③ If reworking using scroll chucks, we recommend the use of new or rebored jaws for improved precision. Please exercise caution not to crush the teeth.



Lathe Operations

④ For items with induction hardened teeth, the hardness is high near the tooth root. When machining the front face, the machined area should be 4 to 6mm smaller than the holding surface diameter dimensions.



Lathe Operations

⑤ For tapping and keyway operations, see the examples given in “Caution on Performing Secondary Operations” in KHK Stock Spur Gear section. When cutting keyways, to avoid stress concentration, always round the corners.
⑥ PB plastic bevel gears are susceptible to changes due to temperature and humidity. Dimensions may change between, during, and after re-machining operations.
⑦ When induction-hardening S45C products, thermal stress cracks may appear. Also, note that the precision grade of the product declines by 1 or 2 grades, as deformation on material may occur. If you require tolerance for bore or other parts, machining is necessary after heat treatment.
⑧ For the handling conveniences, the SB and SBY series listed below have the tapped holes (180° apart, 2 places) on the holding surface. We appreciate your understanding.
Please pay attention to the machining position.

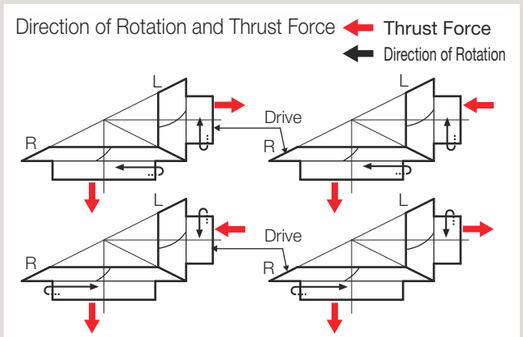
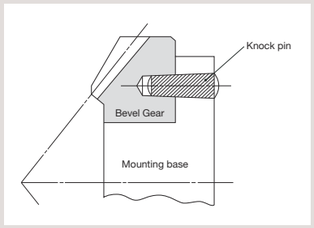
3. Points of Caution during Assembly

① Since bevel gears are cone shaped, they produce axial thrust forces. Especially for spiral bevel gears, the directions of thrust change with the hand of helix and the direction of rotation. This is illustrated below. The bearings must be selected properly to be able to handle these thrust forces. For details, use gear calculation software GCSW.



[NOTE] Bevel gears with the gear ratio 1.57 or less, produce a thrust force which is the same as miter gears. For details, please see Page 308.

② If a gear is mounted on a shaft far from the bearings, the shaft may bend. We recommend designing bevel gears to be as close to the bearings as possible. Design the gear box, shaft and bearing with high rigidity.
③ Be sure to fasten the bevel gear to prevent the gears from moving, as thrust acts on it while rotating.
④ When installing MBSA or MBSB spiral bevel gears produced in B7 style (ring gear), always secure the gears onto the mounting base with taper pins to absorb the rotational loads. It is dangerous to secure with bolts only.



⑤ The recommended assemble distance tolerance of KHK stock bevel gears is H7 for ground gears and H8 for cut gears. Mounting distance error, offset error and shaft angle error must be minimized to avoid excessive noise and wear. Inaccurate assembly will lead to irregular noises and uneven wear. Various conditions of tooth contact are shown below.
Also, when changing the normal direction backlash, adjust the mounting distance according to the amount of axial movement shown in the table below so as not to change the tooth contact.

Gear Ratio (Reduction Ratio)	Normal direction backlash	Travel in axial direction	
		Pinion	Gears
1.5	j_n	$0.81\times j_n$	$1.22\times j_n$
2		$0.65\times j_n$	$1.31\times j_n$
2.5		$0.54\times j_n$	$1.36\times j_n$
3		$0.46\times j_n$	$1.39\times j_n$
4		$0.35\times j_n$	$1.42\times j_n$
5		$0.29\times j_n$	$1.43\times j_n$
15 or more		$1.4\times j_n \div$ Gear Ratio	$1.4\times j_n$

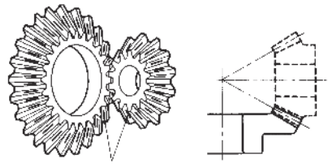
4. Cautions on Starting

① Check the following items before starting.
- Are the gears fastened securely?
- Is there uneven tooth contact?
- Is there adequate backlash?
(Be sure to avoid zero-backlash.)
- Has proper lubrication been supplied?

② If gears are exposed, be sure to attach a safety cover to ensure safety. Also, be careful not to touch rotating gears.
③ If there is any abnormality such as noise or vibration during startup, stop the operation immediately and check the assembly condition such as tooth contact, eccentricity and looseness.

Correct Tooth Contact

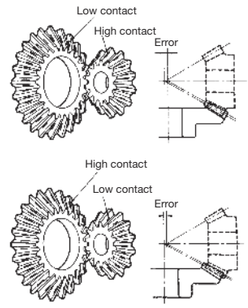
● When assembled correctly, the contact will occur on both gears in the middle of the flank and center of face width but somewhat closer to the toe.



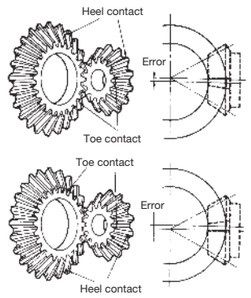
Center contact closer to toes

Incorrect Tooth Contact

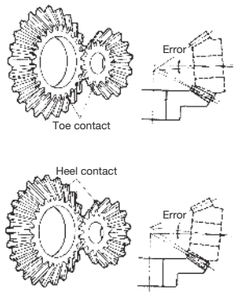
■ Mounting Distance Error
● When the mounting distance of the pinion is incorrect, the contact will occur too high on the flank on one gear and too low on the other.



■ Offset Error
● When the pinion shaft is offset, the contact surface is near the toe of one gear and near the heel of the other.



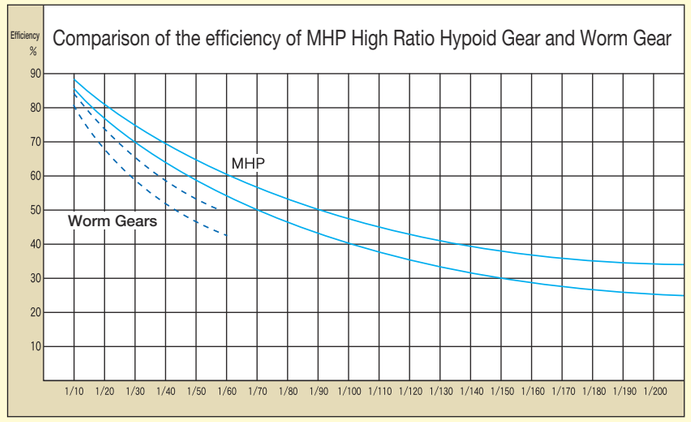
■ Shaft Angle Error
● When there is an angular error of shafts, the gears will contact at the toes or heels depending on whether the angle is greater or less than 90°.



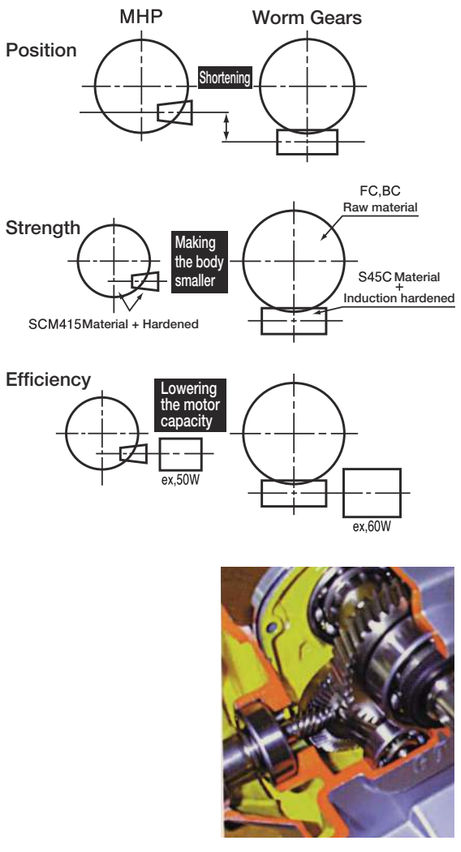
■ Features of MHP High Ratio Hypoid Gears

A pair of MHP high-ratio hypoid gears are able to produce an amazing reduction of speed of 60:1 in one stage.

1. Total-cost reduction
   The MHP provides a compact gearing body replacing several stages of reduction gears. This reduces the cost sharply.
2. High efficiency
   Compared to worm gear drives, the MHP has less sliding contact. The resulting higher efficiency allows the use of smaller motors. (See graph on the right)
3. High rigidity
   The carburized hypoid gears lead to smaller size than comparable worms gears.
4. Compact gear assembly
   The size of the gear housing is nearly the same as outer diameter of the large gear. (See the diagrams below)



Comparison of MHP and Worm Gear



■ How to determine the radial and thrust loads

Before using the MHP high-ratio hypoid gears, be sure to confirm the direction of radial and thrust loads. Following equations are used to compute these loads. The radial and thrust load coefficients are given on the product pages.

Radial load calculation

W_{RP} : Radial load on the pinion or L(N)

$$W_{RP} = W_{KP} \times T_G \times \frac{n}{z}$$

W_{KP} : Radial load coefficient of pinion or L (given on the product pages)
T_G : Torque of gear or R(N·m)
n : Number of teeth of pinion or L
z : Number of teeth of gear or R

W_{RG} : Radial load on the gear or R(N)

$$W_{RG} = W_{KG} \times T_G$$

W_{KG} : Radial load coefficient of gear or R (given on the product pages)
T_G : Torque of gear or R(N·m)

Thrust load

W_{XP} : Thrust load on the pinion or L(N)

$$W_{XP} = W_{NP} \times T_G \times \frac{n}{z}$$

W_{NP} : Thrust load coefficient of pinion or L (given on the product page)
T_G : Torque of gear or R(N·m)
n : Number of teeth of pinion or L
z : Number of teeth of gear or R

W_{XG} : Thrust load of gear or R(N)

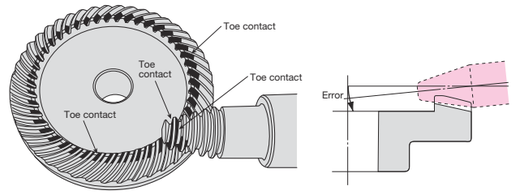
$$W_{XG} = W_{NG} \times T_G$$

W_{NG} : Thrust load coefficient of gear or R (given on the product pages)
T_G : Torque of gear or R(N·m)

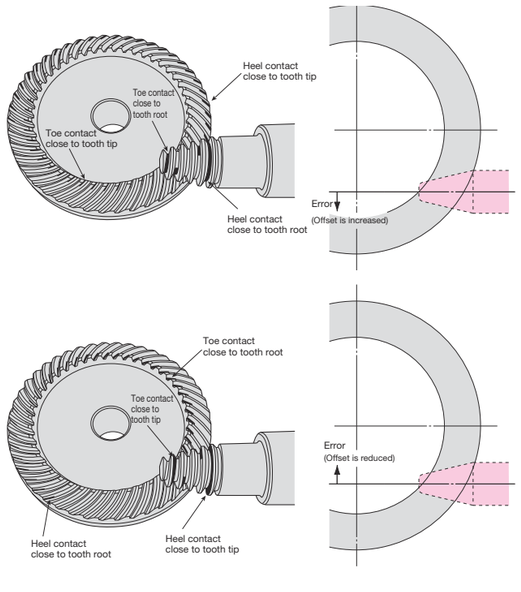
■ Variations in tooth contact due to poor alignment of gears

If the gear engagement position is out of the normal position, variations in tooth contact, as illustrated below, may appear.

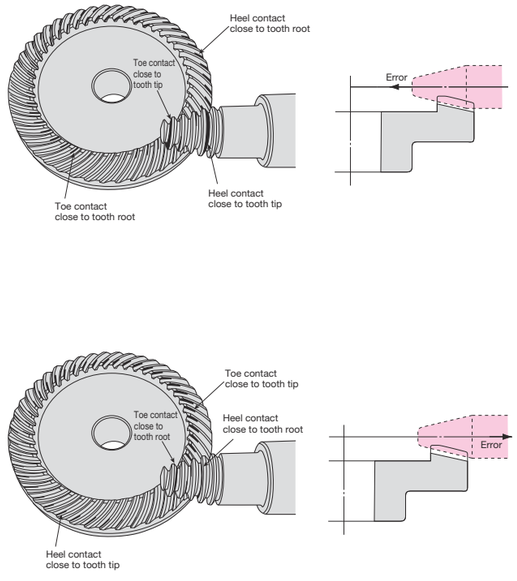
(1) Tooth contact in case of a shaft-angle error



(2) Tooth contact in case of a shaft-offset error



(3) Tooth contact in case of a pinion set position error



(4) Tooth contact in case of a gear set position error

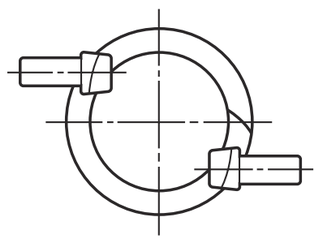
■ Helix Hands and Offset Position

MHP High Ratio Hypoid Gears are designed to be right hand helix for gears, left hand helix for pinions. The opposite helix hand gears are not available for these products. Also, the offset position is already set, so please refer to the illustration bellow when designing or assembling.



■ MHP allowable transmission torque table

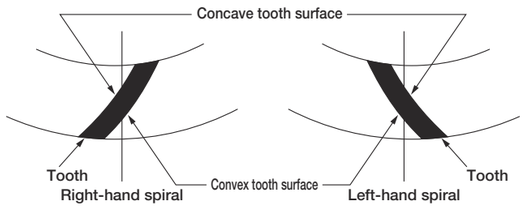
Product Precautions → Page 338

■ Mating surface of spiral bevel gears

Spiral bevel gears have convex and concave tooth surfaces. If the direction of rotation of the drive gear differs, the meshing tooth surface will also change. The table on the right shows how to view the convex and concave tooth surfaces and the meshing tooth surface with respect to the direction of rotation of the drive gear.



For right-hand drive gear

Direction of rotation of drive gear NOTE 1	Meshing tooth surface	
	Right-hand drive gear	Left-hand driven gear
Clockwise	Convex tooth surface	Concave tooth surface
Counterclockwise	Concave tooth surface	Convex tooth surface

For left-hand drive gear

Direction of rotation of drive gear NOTE 1	Meshing tooth surface	
	Left-hand drive gear	Right-hand driven gear
Clockwise	Concave tooth surface	Convex tooth surface
Counterclockwise	Convex tooth surface	Concave tooth surface

[NOTE 1] The direction of rotation in the table is as seen from the hub of the gear.

■ The force applied to the teeth of the spiral bevel gear

The table below shows, for spiral bevel gears with an axis angle of $\Sigma = 90°$, pressure angle of $\alpha n = 20°$ and spiral angle of $\beta m = 35°$, the magnitudes of the axial force Fx and radial force Fr where the tangential force Ft at the center of the tooth width is 100.

$$\frac{\text{Thrust force } Fx}{\text{Radial force } Fr} \text{ value}$$

(1) Force applied to pinion

Meshing tooth surface	Gear Ratio z_2/z_1						
	1.0	1.5	2.0	2.5	3.0	4.0	5.0
Concave tooth surface	80.9 / −18.1	82.9 / −1.9	82.5 / 8.4	81.5 / 15.2	80.5 / 20.0	78.7 / 26.1	77.4 / 29.8
Convex tooth surface	−18.1 / 80.9	−33.6 / 75.8	−42.8 / 71.1	−48.5 / 67.3	−52.4 / 64.3	−57.2 / 60.1	−59.9 / 57.3

(2) Force applied to gear

Meshing tooth surface	Gear Ratio z_2/z_1						
	1.0	1.5	2.0	2.5	3.0	4.0	5.0
Concave tooth surface	80.9 / −18.1	75.8 / −33.6	71.1 / −42.8	67.3 / −48.5	64.3 / −52.4	60.1 / −57.2	57.3 / −59.9
Convex tooth surface	−18.1 / 80.9	−1.9 / 82.9	8.4 / 82.5	15.2 / 81.5	20.0 / 80.5	26.1 / 78.7	29.8 / 77.4

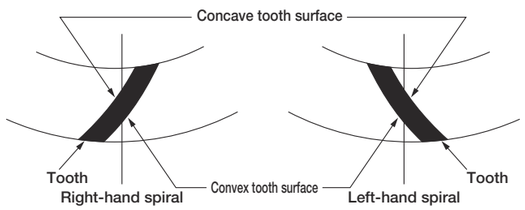
Product Precautions → Page 338

■ Mating surface of spiral bevel gears

Spiral bevel gears have convex and concave tooth surfaces. If the direction of rotation of the drive gear differs, the meshing tooth surface will also change. The table on the right shows how to view the convex and concave tooth surfaces and the meshing tooth surface with respect to the direction of rotation of the drive gear.



For right-hand drive gear

Direction of rotation of drive gear NOTE 1	Meshing tooth surface	
	Right-hand drive gear	Left-hand driven gear
Clockwise	Convex tooth surface	Concave tooth surface
Counterclockwise	Concave tooth surface	Convex tooth surface

For left-hand drive gear

Direction of rotation of drive gear NOTE 1	Meshing tooth surface	
	Left-hand drive gear	Right-hand driven gear
Clockwise	Concave tooth surface	Convex tooth surface
Counterclockwise	Convex tooth surface	Concave tooth surface

[NOTE 1] The direction of rotation in the table is as seen from the hub of the gear.

■ The force applied to the teeth of the spiral bevel gear

The table below shows, for spiral bevel gears with an axis angle of $\Sigma = 90°$, pressure angle of $\alpha n = 20°$ and spiral angle of $\beta m = 35°$, the magnitudes of the axial force Fx and radial force Fr where the tangential force Ft at the center of the tooth width is 100.

$$\frac{\text{Thrust force } Fx}{\text{Radial force } Fr} \text{ value}$$

(1) Force applied to pinion

Meshing tooth surface	Gear Ratio z_2/z_1						
	1.0	1.5	2.0	2.5	3.0	4.0	5.0
Concave tooth surface	80.9	82.9	82.5	81.5	80.5	78.7	77.4
	−18.1	−1.9	8.4	15.2	20.0	26.1	29.8
Convex tooth surface	−18.1	−33.6	−42.8	−48.5	−52.4	−57.2	−59.9
	80.9	75.8	71.1	67.3	64.3	60.1	57.3

(2) Force applied to gear

Meshing tooth surface	Gear Ratio z_2/z_1						
	1.0	1.5	2.0	2.5	3.0	4.0	5.0
Concave tooth surface	80.9	75.8	71.1	67.3	64.3	60.1	57.3
	−18.1	−33.6	−42.8	−48.5	−52.4	−57.2	−59.9
Convex tooth surface	−18.1	−1.9	8.4	15.2	20.0	26.1	29.8
	80.9	82.9	82.5	81.5	80.5	78.7	77.4

Finished Bore Spiral Bevel Gears

Specifications	
Precision grade	JIS B 1704: 1978 grade 4
Gear teeth	Gleason
Pressure angle	20°
Helix angle	35°
Material	SCM415
Heat treatment	Carburized
Tooth hardness	55 to 60HRC

When installing products produced in B7 style (ring type), always secure the gears onto the mounting base with taper pins to absorb the rotational loads. It is dangerous to secure with bolts only.

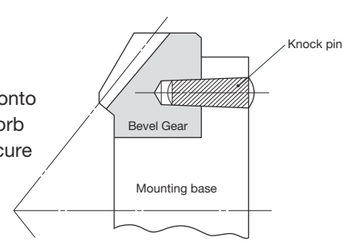
When installing products produced in B7 style (ring type), always secure the gears onto the mounting base with taper pins to absorb the rotational loads. It is dangerous to secure with bolts only.



Product Precautions → Page 338

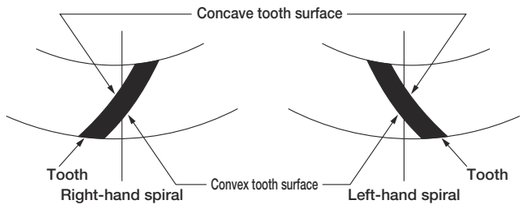
■ Mating surface of spiral bevel gears

Spiral bevel gears have convex and concave tooth surfaces. If the direction of rotation of the drive gear differs, the meshing tooth surface will also change. The table on the right shows how to view the convex and concave tooth surfaces and the meshing tooth surface with respect to the direction of rotation of the drive gear.



For right-hand drive gear

Direction of rotation of drive gear NOTE 1	Meshing tooth surface	
	Right-hand drive gear	Left-hand driven gear
Clockwise	Convex tooth surface	Concave tooth surface
Counterclockwise	Concave tooth surface	Convex tooth surface

For left-hand drive gear

Direction of rotation of drive gear NOTE 1	Meshing tooth surface	
	Left-hand drive gear	Right-hand driven gear
Clockwise	Concave tooth surface	Convex tooth surface
Counterclockwise	Convex tooth surface	Concave tooth surface

[NOTE 1] The direction of rotation in the table is as seen from the hub of the gear.

■ The force applied to the teeth of the spiral bevel gear

The table below shows, for spiral bevel gears with an axis angle of $\Sigma = 90°$, pressure angle of $\alpha n = 20°$ and spiral angle of $\beta m = 35°$, the magnitudes of the axial force Fx and radial force Fr where the tangential force Ft at the center of the tooth width is 100.

$$\frac{\text{Thrust force } Fx}{\text{Radial force } Fr} \text{ value}$$

(1) Force applied to pinion

Meshing tooth surface	Gear Ratio z_2/z_1						
	1.0	1.5	2.0	2.5	3.0	4.0	5.0
Concave tooth surface	80.9 / −18.1	82.9 / −1.9	82.5 / 8.4	81.5 / 15.2	80.5 / 20.0	78.7 / 26.1	77.4 / 29.8
Convex tooth surface	−18.1 / 80.9	−33.6 / 75.8	−42.8 / 71.1	−48.5 / 67.3	−52.4 / 64.3	−57.2 / 60.1	−59.9 / 57.3

(2) Force applied to gear

Meshing tooth surface	Gear Ratio z_2/z_1						
	1.0	1.5	2.0	2.5	3.0	4.0	5.0

Specifications	
Precision grade	JIS B 1704: 1978 grade 3
Gear teeth	Gleason
Pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating

SB Module 1.5~3 Steel Bevel Gears & Pinion Shafts

Specifications	
Precision grade	JIS B 1704: 1978 grade 3
Gear teeth	Gleason
Pressure angle	20°
Material	S45C
Heat treatment	—*
Tooth hardness	(less than 194HB)*
Surface treatment	Black oxide coating

* The pinion is tempered and has the teeth hardness of 200 to 270 HB.

* In regard to MC Nylon gears, other materials are available for plastic gears, including Ultra High Molecular Weight Polyethylene (U-PE), which has excellent abrasion resistance and resin conforming to the Plastic Implementation Measure (PIM). A single piece order is acceptable and will be produced as a custom-made gear. Please see Page 26 for more details on quotations and orders.

Product Precautions → Page 338

DB Module 0.5~1 Injection Molded Bevel Gears

Specifications	
Precision grade	JIS B 1704: 1978 grade 6
Gear teeth	Gleason
Pressure angle	20°
Material	Duracon (R) (M90-44) *
Heat treatment	—
Tooth hardness	(110 to 120HRR)

* "Duracon (R)" is a registered trademark of Polyplastics Co., Ltd. in Japan as well as other countries.

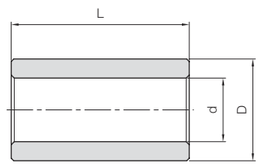
Over 30	±0.50

BB Sintered Metal Bushings

When using the injection molded bevel gear as an idler gear and a shaft diameter smaller than the inside diameter of the molded gear, please press fit one of the following standard bushings.



T8

Catalog Number	Inner dia. $d^{+0.02}_{0}$	Outside dia. $D^{+0.02}_{-0.01}$	Length $L^{0}_{-0.3}$	Gear example

Material: Oil-free copper alloy

Product Precautions → Page 338

Catalog number

Note that the catalog numbers for KSP ground spiral bevel gears have a different configuration compared to other miters and bevel gears.

KSP 031 001 G U L

- L — Direction of spiral (left)
- U — Product shape (prevents carburizing)
- G — Tooth surface finish (ground)
- 001 — Gear Ratio (1)
- 031 — Gear outer diameter (31 mm)
- KSP — Type (Spiral Miter)

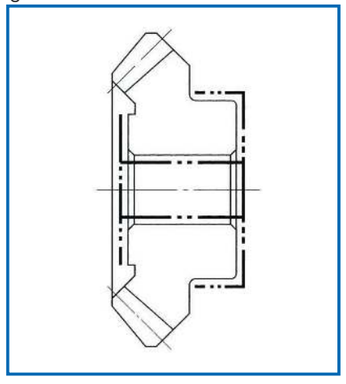
Features of KSP spiral bevel gears

1. High-strength, high-precision product of JIS grade 0.
2. Superior performance with regard to high speed, low noise, and low vibration.
3. Module is 1.5 to 6
4. Gear ratio types are 1, 1.5 and 2

Shape

Shape for secondary operations (with margin)

* The parts ---- in the figure below are protected from carburizing.



Transmission capacity table

1. The values in the transmission capacity table below are where the service factor is 1. Be sure to correct the load torque according to the table on the right. The corrected load torque is calculated by multiplying the load torque applied to the output shaft by service factor (Sf).
2. When using at increased speed (where gear is drive and pinion is driven), the torque of the pinion is the value obtained by multiplying the value shown in the transmission capacity table by the speed ratio.

NOTE 1: When the speed ratio is 1/1.5, the pinion torque is 1/1.5 of the value shown in the transmission capacity table.

Service factor (Sf)

Impact from motor	Impact from load		
	Uniform load	Moderate impact	Severe impact
Uniform load (electric motor, turbine, hydraulic motor, etc.)	1.0	1.25	1.75
Mild impact (multi-cylinder engine)	1.25	1.5	2.0
Moderate impact (single-cylinder engine)	1.5	1.75	2.25

Transmission capacity table (speed ratio 1/1)

Specifications	
Precision grade	JIS B 1704: 1978 grade 0
Gear teeth	Gleason
Pressure angle	20°
Helix angle	35°
Material	SCM415*
Heat treatment	Carburized (Bore and hub are carburized)
Tooth hardness	60 to 63HRC**

* The material of module 3.5 and above is SCM420.
** Modules 1.5 and 2 have the tooth hardness of 80 to 83 HRA.

■ Adjustment of tooth contact

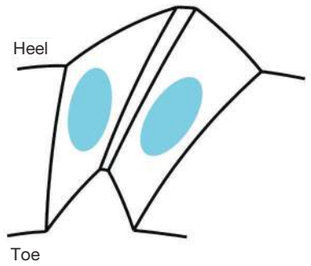
<Center of tooth contact>

(1) Near the center of the tooth length for the length direction

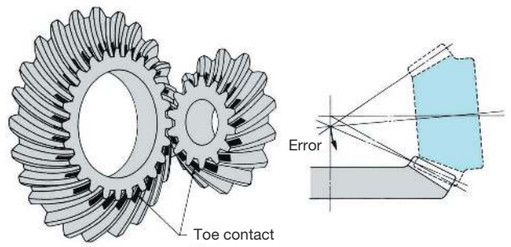
(2) Ideally, the tooth width direction should be at the center of the width or slightly closer to the toe.

When adjusting the backlash and mounting the gear in the case, adjust the case in order to achieve the tooth contact as shown in the figure below.

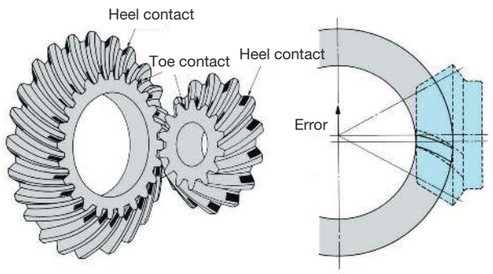
Deviation of the tooth contact from the normal position may adversely affect the strength and quietness.



(1) Tooth contact in case of a shaft-angle error



(2) Tooth contact in case of a shaft-offset error



(3) Tooth contact in case of a pinion set position error

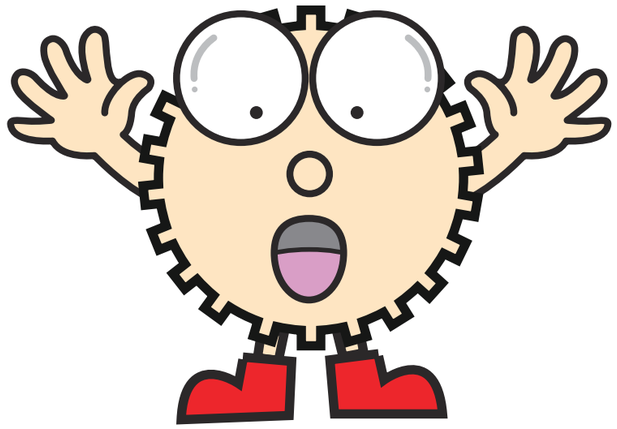
(M) Includes Made to Order



Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Screw Gears

S N 1 - 13 R

- R — Direction of Helix (Right)
- 13 — No. of Teeth (13)
- 1 — Module (1)
- N — Type (Screw Gears)
- S — Material (S45C)

Material		Type	
S	S45C	N	Screw Gears
SU	Stainless Steel		
A	CAC702		
P	MC901		

Features

KHK stock screw gears come in four materials, S45C, SUS303, CAC702 (old JIS A ℓ BC2) and MC nylon, in modules 1~4 and numbers of teeth from 10 to 30.

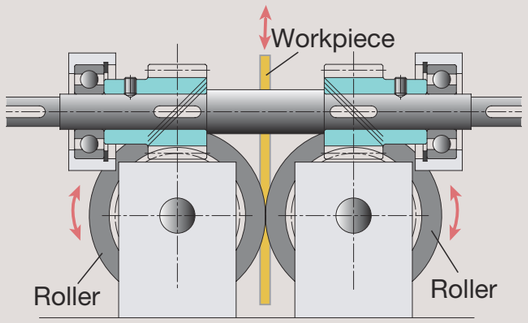
Catalog Number	Module	Material	Heat Treatment	Tooth Surface Finish	Precision JIS B 1702-1:1998	Secondary Operations	Features
SN	1~4	S45C	—	Cut	N9	○	Many lineups are available at a low price. The teeth can be hardened.
SUN	1~3	SUS303	—	Cut	N9	○	Stainless steel gears with rust resistance.
AN	1~3	CAC702 (A ℓ BC2)	—	Cut	N9	○	Aluminum bronze made gears with excellent wear resistance.
PN	1~3	MC901	—	Cut	N10	○	Nylon gears can be used with no lubrication.

○ Possible △ Partly possible × Not possible

Application Examples

KHK stock screw gears are used in various labor-saving machines including conveyor machine and transport.

■ Design example of feeding device (not a design for machinery or a device in actual use)



Rotate the roller in reverse with one input shaft and move the pinched workpiece vertically

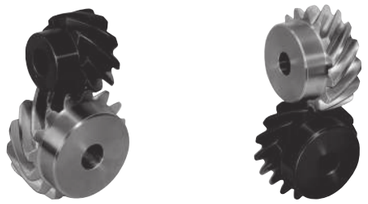
Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. Since screw gears come in right- or left-hand helix, make sure to include the letter “R” or “L” in the catalog number when you order.

1. Caution in Selecting the Mating Gears

Screw gears are used for offset shafts. Whether the shafts are paralleled offset or skewed offset depends on the helix directions of the mating gears.

Direction of shaft	Arrangement of helix hands
Skewed Axes	RH-RH or LH-LH
Parallel Axes	RH-LH



Right (R) Left (L)

Arrangements of helix directions of screw gears

2. Caution in Selecting Gears Based on Gear Strength

The allowable surface strengths listed in the product pages were derived using the Niemann formula as reference values. (Used with skewed shafts) There is a paucity of data on the strength of screw gears. The values of constant K_0 used in the calculations, which depend on the material of the mating gears, are our estimates. The mathematic expression below shows the Niemann formula to determine allowable tangential force Ft (kgf) and allowable torque T (kgf·m) on a basic circle.

$$Ft = 1.43 d_1^2 fz Ks$$

$$T = \frac{Ft d_1}{2000}$$

Here, d_1 : standard pitch diameter of pinion (mm)
fz : coefficient based on no. of teeth combination
Ks : coefficient based on materials and sliding speed

$$Ks = K_0 \frac{2}{2+Vs}$$

Here, K_0 : coefficient based on material selection
Vs : sliding speed (m/s)

$$Vs = \frac{\pi n d_1}{60000 \cos\beta}$$

Here, n : rotational speed (rpm)
β : helix angle (45°)

■ fz value

Z_2 \ Z_1	10	13	15	20	26	30
10	1.538					
13	2.005	1.538				
15	2.279	1.786	1.538			
20	2.963	2.329	2.053	1.538		
26	3.695	2.963	2.588	2.005	1.538	
30	4.161	3.350	2.963	2.279	1.786	1.538

■ Setting values depending on usage conditions

Catalog Number	Mating gear	K0 value	Maximum allowable sliding speed m/s	No. of teeth of mating gears	Rotational Speed
SN	SN	0.0030	2.5	Same no. of teeth	100rpm
SUN	SN	0.0030 Note 1	2.5 Note 1		
AN	SN	0.0050	5		
PN	SN	0.0030 Note 1 (0.0021)	2.5 Note 1 (1.0)		

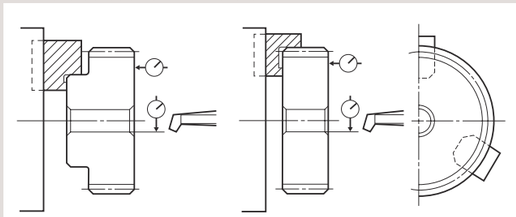
[NOTE 1] K0 values and the maximum allowable sliding speed of SUN & PN products are set by KHK. Screw gears are basically used with lubrication. In case of using PN products without lubrication, the parenthetical values shown in the table are applied.

Application Hints

In order to use KHK stock screw gears safely, read the Application Hints carefully before proceeding.
Please refer to Page 48 for “Cautions on Handling” and Page 49 for “Cautions on Starting”.

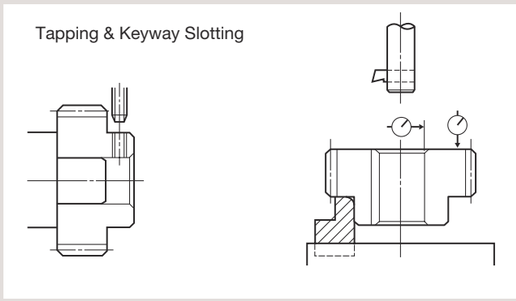
1. Caution on Performing Secondary Operations

① If reboring, it is important to pay special attention to locating the center in order to avoid runout.
② The reference datum for gear machining is the bore. Therefore, use the bore for locating the center. If it is too difficult to do for small bores, the alternative is to use one spot on the bore and the runout of the side surface.
③ If reworking using scroll chucks, we recommend the use of new or rebored jaws for improved precision. Please exercise caution not to crush the teeth.



Lathe Operations

④ The maximum bore size is dictated by the requirement that the strength of the hub is to be higher than that of the gear teeth. The maximum bore size should be 60% to 70% of the hub diameter (or tooth root diameter), and 50% to 60% for keyway applied modifications.
⑤ In order to avoid stress concentration, round the keyway corners.

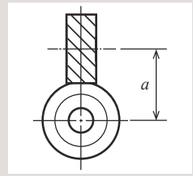


2. Points of Caution during Assembly

① The recommended center distance tolerance of KHK stock screw gears is H7 for ground gears and H8 for cut gears. The amount of backlash is given in the product table for each gear.

$$a = \frac{d_1 + d_2}{2}$$

Where
a : Center distance
d_1 : Pitch diameter of pinion
d_2 : Pitch diameter of gear



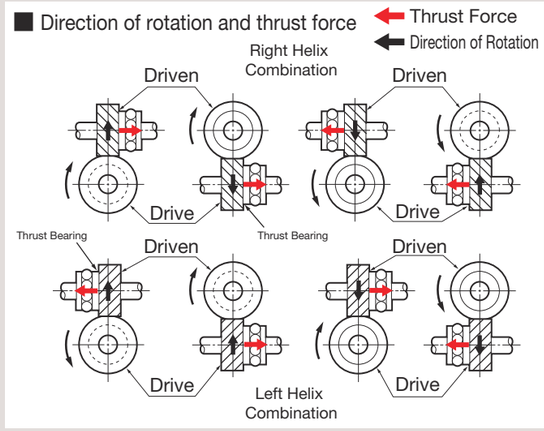
② Total Length Tolerance for Screw Gears

Total Length (mm)	Tolerance
30 or less	0 −0.10
31 to 100	0 −0.15

[NOTE] PN Plastic Screw Gears are excluded.

③ Due to the helix of screw gears, they produce axial thrust forces. The bearings must be selected properly to be able to handle these thrust forces. The directions of thrust change with the direction of helix and the direction of rotation as illustrated below.
For details, use gear calculation software GCSW.

■ Direction of rotation and thrust force



[NOTE] For parallel shaft applications, see the Application Hints for KHK Helical Gears (Page 193).

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
   ① Turn off the power switch.
   ② Do not reach or crawl under the product.
   ③ Wear appropriate clothing and protective equipment for the work.

Caution: Cautions in Preventing Accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

Selecting the Gears

Step 1 Determine the calculated load torque applied to the gear and the gear type suitable for the purpose.

Step 2 Select provisionally from the allowable torque table in this catalog based on the load torque.

■ For provisional selection from this catalog

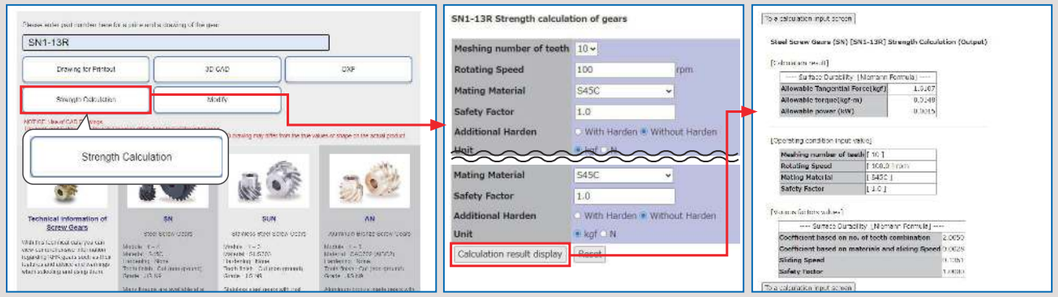
SN1.5-30R			R														

Step 3 Calculate the strength under the actual usage conditions.

Calculate the strength formally using the various gear strength formulas. We recommend using the simple strength calculation available on our website.

■ Use the strength calculation function on our website.



■ Surface durability

Calculated values of the strength at which the gear teeth do not wear due to surface fatigue damage.

Example of wear due to insufficient surface durability

Product Precautions

Common Notes

[Caution on Product Characteristics]

(1) The allowable torque shown in the table are calculated values according to the assumed usage conditions. Please see Page 376 for more details.
(2) The backlash values shown in the table are the theoretical values for the backlash in the normal direction of a pair of identical gears in mesh.
(3) Variations in temperature or humidity can cause dimensional changes in plastic gears, including tooth diameter, bore, and backlash. The accuracy and tolerances shown in the catalog are values obtained when machining is performed.
(4) When mating screw gears are made of the same material, they may cause abrasion and scoring. It is recommended to mate screw gears composed of different materials.
(5) For offset shaft applications, match a RH with a RH, or LH with a LH, to make a set of screw gears. For parallel shaft applications, mesh opposite hands (RH and LH) of helical gear sets. See Page 376 for more details on selection precautions.
(6) For bores of ϕ 4 or below, the bore tolerance is H8. As well, the tolerance is H8 for ϕ 5 or ϕ 6 bores with hole length (total length) 3x the bore or more.
(7) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.
(8) For products having a tapped hole, a set screw is included.
(9) These bevel gears produce axial thrust forces. Please see Page 377 for more details.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" (Page 377) when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).
(3) See Page 22 for more details on Hardened Plus (H Series and HJ Series).

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Certain products which would otherwise have a very long tapped hole are counterbored. For details, see the KHK website.
(3) Black oxide is not re-applied to parts undergoing secondary operations.

When selecting KHK standard gears, glance over the Cautions on Product Characteristics and Cautions on Performing Secondary Operations above.

① Products not listed in this catalog or materials, modules, number of teeth and the like not listed in the dimensional tables can be manufactured as custom items. Please see Page 26 for more details.
② The color and shape of the product images listed on the dimension table page of each product may differ from the actual product.
Be sure to confirm the shape in the dimension table before selection.
③ The details (specifications, dimensions, etc.) listed in the catalog may be changed without prior notice. Changes are announced on the KHK website.

Screw Gears
Worm Gears
Gearboxes
Other Products

SN Module 2.5, 3, 4
Screw gear (helical gear) *NEW*

Specifications	
Precision grade	JIS grade N9 (JIS B1702-1: 1998)*
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Normal pressure angle	20°
Helix angle	45°
Material	S45C
Heat treatment	—
Surface treatment	Black oxide coating

* The precision grade of J Series products is equivalent to the value shown in the table.

PN Module 1~3 Plastic screw gear (helical gear)

Specifications	
Precision grade	JIS grade N10 (JIS B1702-1: 1998)*
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Normal pressure angle	20°
Helix angle	45°
Material	MC901
Heat treatment	—

* The precision grade is equivalent to the value shown in the table.

* In regard to MC Nylon gears, other materials are available for plastic gears, including Ultra High Molecular Weight Polyethylene (U-PE), which has excellent abrasion resistance and resin conforming to the Plastic Implementation Measure (PIM). A single piece order is acceptable and will be produced as a custom-made gear. Please see Page 26 for more details on quotations and orders.

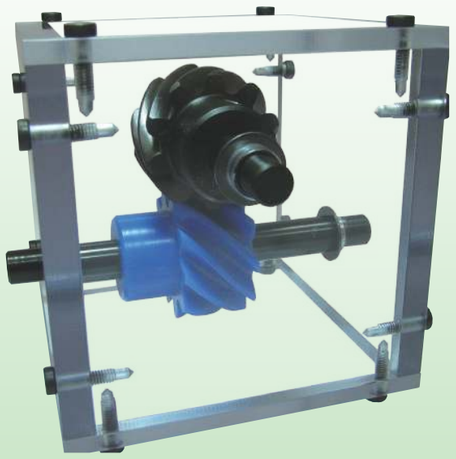
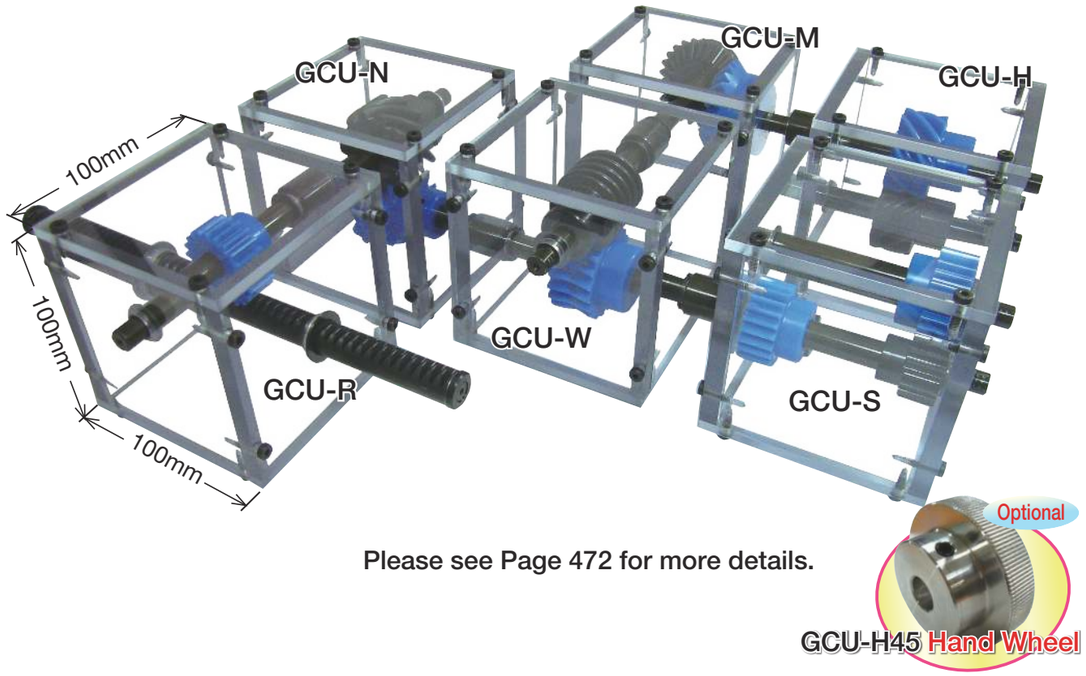
GCU-N Screw Gear Kit



Installation : Nonparallel and nonintersecting gears
Gear Type : Screw Gears
Gears : SN2.5-10R
PN2.5-10R
Gear Ratio : 1
Weight : Approx. 1kg

Screw Gears are helical gears used in nonparallel and nonintersecting situations. Applications include devices like conveyers with light loads.

* This is not a gear box for actual use to transmit power. Please use only as representations of gear systems.



Please see Page 472 for more details.

M Includes Made to Order

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Worm Gear Pair

Worms

K W G DL 2 - R1

- R1: Number of Starts (Right-hand Lead 1)
- 2: Module (2)
- DL: Other Information (Duplex)
- G: Other Information (Ground Gears)
- W: Type (Worm)
- K: Material (SCM440)

Material		Type	
K	SCM440	W	Worms
S	S45C	**Other Information**	
SU	Stainless Steel	DL	Duplex
		G	Ground Gears
		S	Pinion Shafts

Worm Wheels

A G DL 2 - 20 R1

- R1: Number of Starts (Right-hand Lead 1)
- 20: No. of Teeth (20)
- 2: Module (2)
- DL: Other Information (Duplex)
- G: Type (Worm Wheel)
- A: Material (CAC702)

Material		Type	
A	CAC702	G	Worm Wheels
B	CAC502	**Other Information**	
C	FC200	DL	Duplex
P	MC901	F	Double Hubs or Ring Gears

Features

KHK stock worm gears are available in modules 0.5 to 6, reduction ratios of 1/10 to 1/120, and a wide range of materials and shapes. Duplex worm gears with adjustable backlash and highly accurate rotation are also available. The following table lists the main features.

Type		Catalog Number	Module	Number of Starts or Reduction Ratio	Material Old JIS in parentheses	Heat treatment	Tooth Surface Finish	Precision Grade KHK W 001 KHK W 002 Note 2	Features
Duplex Worm Gears	Worms	**KWGDL**	2~4	Single Start	SCM440	Thermal refined, gear teeth induction hardened	Ground	1	Duplex worms that have been tempered, hardened and ground that has excellent accuracy, strength and abrasion resistance. Secondary operations can be given except for the teeth. Moving it in axial direction will adjust the backlash.
	Worms	**KWGDLS**	1.5~4	Single Start	SCM440	Thermal refined, gear teeth induction hardened	Ground	1	Duplex worms with shafts that have been tempered, hardened and ground that has excellent accuracy, strength and abrasion resistance. Secondary operations can be given except for the teeth. Moving it in axial direction will adjust the backlash.
	Wheels	**AGDL**	1.5~4	20~60	CAC702 (AℓBC2)	—	Cut	1	Duplex worm wheels made of aluminum bronze with excellent accuracy and a good balance between machinability and wear resistance. Used in combination with KWGDL or KWGDLS.
Worm Gears	Worms	**KWG**	0.5~6	Single or Double Start	SCM440	Thermal refined, gear teeth induction hardened	Ground	2	Worms with shafts that have been tempered, hardened and ground that has excellent accuracy, strength and abrasion resistance. Secondary operations can be performed except for the teeth.
	Wheels	**AGF** NOTE 1	2~6	10~60	CAC702 (AℓBC2)	—	Cut	2	Worm wheels made of aluminum bronze with a good balance between machinability and wear resistance. Used in combination with KWG.
	Worms	**SWG**	1~6	Single or Double or Triple Start	S45C	Gear teeth induction hardened	Ground	2	Worms that have been hardened and ground with a good balance of accuracy, wear resistance and cost. Secondary operations are possible except for the teeth.
	Wheels	**AG** NOTE 1	1~6	10~60	CAC702 (AℓBC2)	—	Cut	2	Worm wheels made of aluminum bronze with a good balance between machinability and wear resistance. Used in combination with SWG. Note 1
	Worms	**SW**	0.5~6	Single or Double Start	S45C	—	Cut (Rolling)	4	Many lineups are available at a low price and excellent usability.
	Worms	**SUW**	0.5~3	Single or Double Start	SUS303	—	Cut	4	Stainless steel worms with rust resistance.
	Wheels	**BG**	0.5~6	10~60	CAC502 (PBC2)	—	Cut	4	Worm wheels made of phosphorus bronze with excellent wear resistance. Used in combination with SW and SUW.
	Wheels	**CG**	1~6	10~120	FC200	—	Cut	4	Cast iron worm wheels that are inexpensive and suitable for light loads. Used in combination with SW and SUW.
	Wheels	**PG**	0.5~3	10~50	MC901	—	Cut	5	Worm wheels made of MC nylon. Can be used with no lubrication. Used in combination with SW and SUW.

[Note 1] FC200 is the material for the hubs of AGF and AG worm wheels. The AG worm wheels are normally combined with the SWG worms, but are also compatible with the KWG worms with module 1.5 and below .

[Note 2] The precision grade of KHK stock worm gears controls the product quality based on the KHK standards. Please see “Precision of Worm Gears” on Page 396 in the Selection Hints section for details.

High-precision ground gear worms are available.

We use screw grinding machines manufactured by DRAKE, USA, to manufacture high-precision ground worms of module 0.5 to 8.

CNC Screw Grinding Machine (TE-LM200)

Worm ground gear machining range	
Maximum gear accuracy	KHK Grade 1
Maximum module	*m*8
Maximum nominal lead angle	±35°
Maximum outer diameter	ϕ200mm
Maximum length	330mm

Application Examples

KHK stock worm gears are used in a wide range of fields, including reduction gears and positioning mechanisms.

■ Wiper Drive Device

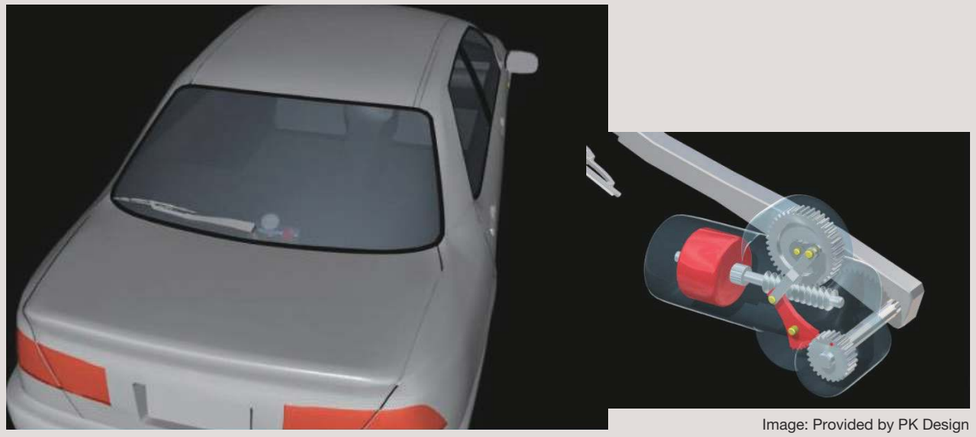

Image: Provided by PK Design

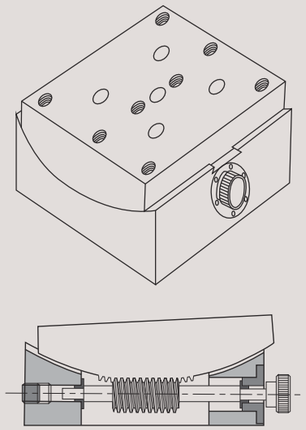
Worm gear used for the oscillating mechanism of wipers

■ Yaesu Steam Kettle

SW worm and CG worm wheel used for rotating large pans

■ Gonio Stage Design Example



Worm gear used for rotating tables (design example)

■ Masdac Food Filling Device

KWGDL Duplex Worm Wheels and AGDL Worm Wheels used for indexing and driving, for accurate filling of a fixed amount of ingredients

■ Fabric Feeding Device

SW worm and BG worm wheel used for adjusting height

Selection Hints

Please select the most suitable products by carefully considering the characteristics of items and contents of the product tables. It is also important to read all applicable "CAUTION" notes shown below before the final selection.

1. Caution in Selecting the Mating Gears

Worm gears are available in right-hand helix and left-hand helix. Worms and worm wheels of the same helix direction are combined. However, combination may not be possible due to the difference in the number of starts of the worm and the difference in pitch being normal and transverse (axial direction). Below is the Mating Helical Gear Selection Chart for KHK worm gears.

■ Mating Worm Wheel Selection Chart

Worms		KWGDL KWGDLS	KWG		SWG			SW				SUW	
Mating Wheel Note 1	Hand Number of Starts	R1	R1	R2	R1	R2	R3	R1	R2	L1	L2	R1	R2
AGDL	R1	○

	R2			○									
AG	R1				○								
	R2					○							
	R3						○						
BG	R1							○				○	
	R2								○				○
	L1									○			
	L2										○		
CG	R1							○				○	
	R2								○				○
	L1									○			
	L2										○		
PG	R1							○				○	
	R2								○				○

[Note 1] The mating wheel must have the same module as the worm.

■ Helix direction of worm gears

2. Caution in Selecting Gears Based on Gear Strength

The gear strength values shown in the product pages were computed by assuming the application environment in the table below. Therefore, they should be used as reference only. We recommend that each user computes their own values by applying the actual usage conditions.

■ Calculation of Surface Durability   **■ Calculation of Bending Strength of Gears**

Item \ Catalog Number	KWGDL/KWGDLS/AGDL KWG/AGF, SWG/AG	SW/BG	SW/CG	SUW/PG
Formula NOTE 1	Formula of cylindrical worm gear strength (JGMA405-01)			The Lewis formula
Lubricating Oil	Lubricating oil with appropriate viscosity that contains extreme pressure additive for gears			Allowable bending stress (kgf/mm²)
Lubrication Method	Oil Bath Lubrication (Oil Bath)			1.15 (40°C with No Lubrication)
Startup Status	The starting torque is 200% or less of the rated torque, and the number of starts per hour is under 2.			
Expected Service Life	26,000 hours			
Impact from motor	Uniform load			
Impact from load	Uniform load			
Allowable Stress Coefficient Sclim	0.67	0.70	0.42	

[NOTE 1] The gear strength formula is based on JGMA (Japanese Gear Manufacturers Association) specifications, "MC Nylon Technical Data" by Mitsubishi Chemical Advanced Materials. The units for the rotational speed (rpm) and the stress (kgf/mm²) are adjusted to the units needed in the formula.

When selecting KHK standard gears, glance over the Cautions on Product Characteristics and Cautions on Performing Secondary Operations on Page 398.

① Products not listed in this catalog or materials, modules, number of teeth and the like not listed in the dimensional tables can be manufactured as custom items. Please see Page 26 for more details about custom-made orders.
② The color and shape of the product images listed on the dimension table page of each product may differ from the actual product. Be sure to confirm the shape in the dimension table before selection.
③ The details (specifications, dimensions, etc.) listed in the catalog may be changed without prior notice. Changes are announced on the KHK website.

Website   URL : https://khkgears.net/new/
Overseas Sales Department: Phone : +81-48-254-1744 Fax: +81-48-254-1765 E-mail: info@khkgears.net

The most important factor in selecting gears is the gear strength.

Step 1 Use the calculation of load torque applied to the gear and the sliding speed to determine the worm gear suitable for the purpose.

■ Maximum allowable sliding speed due to friction

The maximum allowable sliding speed of each worm gear is shown in the table below. Sliding speed should be calculated when making a selection.

Sliding speed v_s (m/s)

$$v_s = \frac{dn}{19100 \cos \gamma}$$

d : Worm pitch dia.
n : Worm rotational speed
γ : Worm nominal lead angle

Catalog Number	Maximum allowable sliding speed (m/s)
AGDL	* 15
AGF	* 15
AG	* 15
BG	* 10
CG	* 2.5
PG	1 (No Lubrication)

* From JGMA405-01

■ Surface durability

Calculated values of the strength at which the worm wheel teeth do not wear due to surface fatigue damage. If the tooth surface is not sufficiently lubricated, the surface may be damaged even if the load is less than the tooth surface durability.

Step 2 Select provisionally from the allowable torque table in this catalog based on the load torque.

■ For provisional selection from this catalog

NOTE 1: Allowable torque based on worm speed (rpm)

Catalog Number	Reduction ratio	No. of teeth	No. of starts of mating worm	Lead angle	helix direction	Shape	A_{H7}	B	C	D	D'	E	F	G	J	Allowable torque (N·m) NOTE 1 30 rpm	100 rpm	300 rpm	600 rpm	900 rpm	1200 rpm	1800 rpm	Backlash (mm)	Weight (kg)

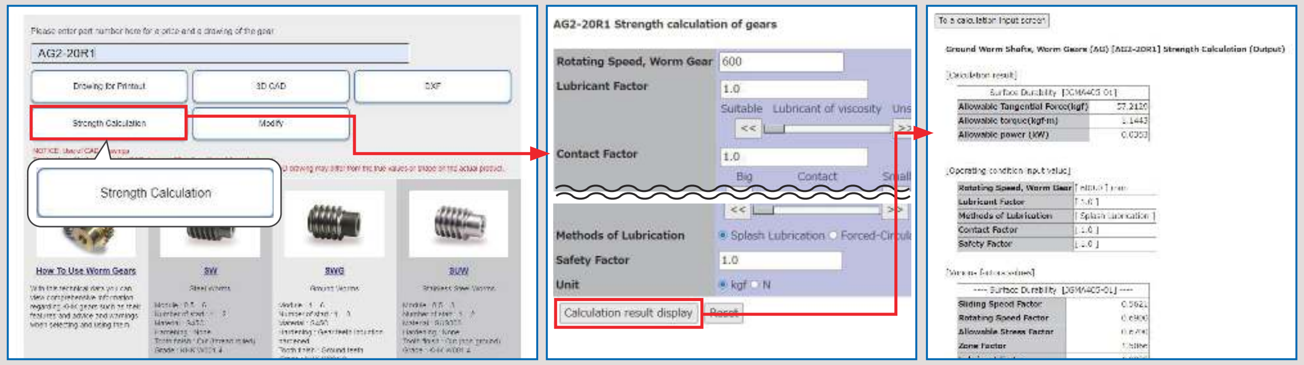
[Caution on Product Characteristics] ① The allowable torques shown in the table are calculated values according to the assumed usage conditions. Please see Page 386 for more details.
[Caution on Secondary Operations] ① Please read "Cautions on Performing Secondary Operations" (Page 390) when performing modifications and/or secondary operations for safety concerns.
KHK Quick-Mod Gears, the KHK system for quick modification of KHK stock gears, is also available.

Step 3 Calculate the strength under the actual usage conditions.
Calculate the strength formally using the various gear strength formulas. We recommend using the simple strength calculation available on our website.

■ Use the strength calculation function on our website.



3. Cautions on Selecting Racks By Precision

The precision standards of KHK stock worm gears are established by us. Check the precision table below.

① Worm Precision (KHK W 001)

For the pitch error and lead error of the worm, the allowable values of 1 to 4 grades are set for each module with reference to the JIS standards. The lead error is the allowable value of the tooth trace error in one lead.

■ Worm Precision KHK W 001 (Unit: μ m)

Grade	Error	Module				
		Over *m*0.4 to 1	Over *m*1 to 1.6	Over *m*1.6 to 2.5	Over *m*2.5 to 4	Over *m*4 to 6
1	Pitch Error	8	12	16	20	25
	Lead Error	7	9	11	13	16
2	Pitch Error	12	16	20	24	29
	Lead Error	15	18	21	25	28
3	Pitch Error	16	23	30	37	50
	Lead Error	20	23	27	33	37
4	Pitch Error	20	30	40	50	70
	Lead Error	30	32	38	46	52

② Worm Wheel Accuracy (KHK W 002)

Our precision grades for pitch errors are established by referring to old JIS Standards. The precision grades are set from 1 to 5, in accordance with the tolerance of a single pitch error (S.P.E.), adjacent tooth-to-tooth error (T.T.E.), and the total composite error (T.C.E.) for each module and pitch diameter.

■ Worm Wheel Accuracy KHK W 002　Unit: μ m

Grade	Error	Over *m*0.4 to 1					Over *m*1 to 1.6					Over *m*1.6 to 2.5					Over *m*2.5 to 4					Over *m*4 to 6				
		Pitch dia. (mm)																								
		6 to 12	12 to 25	25 to 50	51 to 100	100 to 200	12 to 25	25 to 50	51 to 100	100 to 200	200 to 400	12 to 25	25 to 50	51 to 100	100 to 200	200 to 400	25 to 50	51 to 100	100 to 200	200 to 400	400 to 800	25 to 50	51 to 100	100 to 200	200 to 400	400 to 800

③ Total Length Tolerance for Worm Gears

■ Total Length Tolerance for Worms

Series	Total Length (mm)	Tolerance
KWGDL	Uniform	0 −0.10
SWG SW SUW	100 or less	0 −0.15
	Over 100 200 or less	0 −0.20
KWGDLS KWG	Uniform	Normal Tolerance

■ Total Length Tolerance for Worm Wheels

Total Length (mm)	Tolerance
30 or less	0 −0.10
31 to 100	0 −0.15
Over 100	0 −0.20

[NOTE] PG Plastic Wheels are excluded.

4. Cautions in Selecting Worm Gears Based on Efficiency

The transmission efficiency of worm gears varies slightly depending on the assembled state, lubricating oil and the like, but the transmission efficiency (excludes bearing loss and loss of lubricating oil due to stirring) of worm wheels when driven from the worm is approximately 30% to 90%. The transmission efficiency table of the KHK stock worm gears is shown below (reference values).

① Efficiency of Various Worms

■ KWGDL/KWGDLS/AGDL Worm Gear Efficiency (%)

(rpm = Worm Rotational Speed)

Catalog Number \ Worm Rotational Speed	100	300	600	900	1200	1800
KWGDLS1.5-R1	35	42	47	51	53	57
KWGDL2-R1	38	45	51	55	56	61

SWG3-R3	67	74	78	80	82	84
SWG4-R3	68	75	79	82	83	86

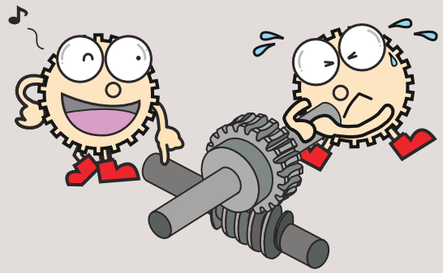
■ SW, SUW/CG, BG, PG Worm Gear Efficiency

The values shown in the table below are estimates and may vary slightly according to conditions such as assembled state, load, lubrication and rotation speed.

Catalog Number	Number of Starts	Efficiency (%)
SW/SUW	1 Start	30~50%
	2 Starts	50~60%

② Self-locking of worm gears

The state of the worm not being able to be rotated from the worm wheel is called self-locking. Self-locking happens due to the worm gear's material, lead angle, machining accuracy, bearing type, lubricating oil, etc.
There are various factors, so self-lock is not always determined only by the lead angle, but usually a single-start worm self-locks at a lead angle of 4° or less. If complete reverse prevention is required, use another braking mechanism or the like in combination.



Product Precautions

Worm Common Notes

[Caution on Product Characteristics]

(1) These worm gears produce axial thrust forces. Please see Page 400 for more details.
(2) For bores of ϕ 4 or below, the bore tolerance is H8. As well, the tolerance is H8 for ϕ 5 or ϕ 6 bores with hole length (total length) 3x the bore or more.
(3) For hole lengths 3.5x the bore or more, the hole center is out of H7 tolerance.
(4) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.
(5) For products having a tapped hole, a set screw is included.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 400 when performing modifications and/or secondary operations for safety concerns.
(2) Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Black oxide is not re-applied to parts undergoing secondary operations.

Worm Wheel Common Notes

[Caution on Product Characteristics]

(1) The allowable torque shown in the table are calculated values according to the assumed usage conditions. Please see Page 394 for more details.
(2) These worm gears produce axial thrust forces. Please see Page 400 for more details.
(3) Variations in temperature or humidity can cause dimensional changes in plastic gears, including tooth diameter, bore, and backlash. The accuracy and tolerances shown in the catalog are values obtained when machining is performed.
(4) For bores of ϕ 4 or below, the bore tolerance is H8. As well, the tolerance is H8 for ϕ 5 or ϕ 6 bores with hole length (total length) 3x the bore or more.
(5) Some products have a slight gap in the casted section, but this does not affect the holding strength.
(6) Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that keyway tooth position alignment is not performed.
(7) For products having a tapped hole, a set screw is included.

[Caution on Secondary Operations]

(1) Please read "Cautions on Performing Secondary Operations" on Page 400 when performing modifications and/or secondary operations for safety concerns.
(2) Because it affects the cast portion, there is no additional modification other than to the boss part.
(3) As the worm wheel is casted, bubbles may form inside the material.
If the air bubbles found in secondary operations are problematic, contact the supplier.

[J Series]

(1) Cancellation is not possible for made-to-order products. For lead time details, see Page 38.
(2) Certain products which would otherwise have a very long tapped hole are counterbored. For details, please see the KHK website.
(3) For bores over ϕ 50, the bore tolerance is H8.

KWGDL(S) Duplex Worms

[Caution on Product Characteristics]

(1) When the center distance is moved to reduce the backlash, the V max is the maximum amount of distance that you may shift without causing problems with the gear mesh. The V max is not a recommended value to use for adjustment when assembling.

AGDL Duplex Worm Wheels

[Caution on Product Characteristics]

(1) Duplex worms and worm wheels must be mated in a predetermined orientation, which is indicated by the arrows. Therefore, the arrow on the wheel does not indicate the mounting direction, but the rotating direction. See "Points of Caution in Assembling" on Page 400.

AGF Worm Wheels

[Caution on Product Characteristics]

(1) For H0 products with bore of ϕ 190 or larger, the bore tolerance is H8.

BG Worm Wheels

[Caution on Product Characteristics]

(1) The worm wheel is shifted to fit the mounting distance.

CG Worm Wheels

[Caution on Product Characteristics]

(1) The worm wheel is shifted to fit the mounting distance.
(2) H2 has a long cast hole in the web (H) section.

PG Worm Wheels

[Caution on Product Characteristics]

(1) The worm wheel is shifted to fit the mounting distance.

Application Hints

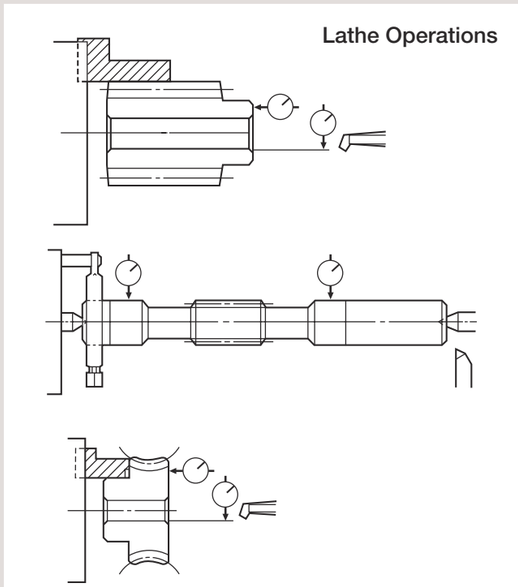
In order to use KHK stock worm gears safely, carefully read the Application Hints before proceeding.
If there are questions or you require clarifications, please contact our technical department or your nearest distributor.
E-mail: info@khkgears.net

1. Cautions on Handling

① KHK products are packaged one by one to prevent scratches and dents, but if you find issues such as rust, scratches, or dents when the product is removed from the box after purchase, please contact the supplier.
② Depending on the handling method, the product may become deformed or damaged. Resin gears and ring gears deform particularly easily, so please handle with care.

2. Caution on Performing Secondary Operations

① Gears are machined based on the ground section of the hole or shaft. If machining, it is important to pay special attention to locating the center in order to avoid runout. (Fig.1)
If it is too difficult to do for small bores, the alternative is to use one spot on the bore and the runout of the hub end surface.



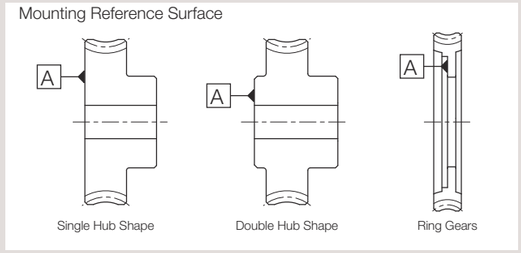
If reworking using scroll chucks, we recommend the use of new or rebored jaws for improved precision.

Fig. 1

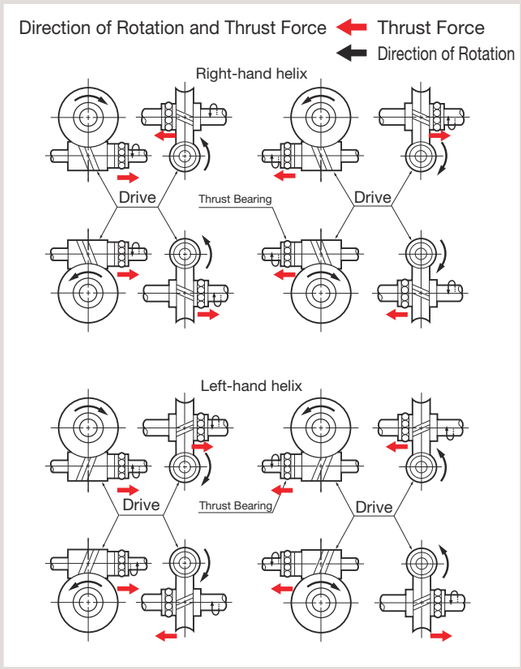
② If enlarging the bore diameter, the wall strength of the hub must be higher than that of the gear teeth. The maximum bore size should be 60% to 70% of the hub diameter (or tooth root diameter), and 50% to 60% for keyway applied modifications. Also, because the cast FC200 hub is weaker and more brittle than other steels, we recommend using a maximum bore diameter about 10% smaller.
③ As the worm wheel is casted, bubbles may form inside the material. If the air bubbles found in secondary operations are problematic, contact the supplier.

3. Points of Caution during Assembly

① The recommended center distance tolerance of KHK stock worm gears is H7 for ground gears and H8 for cut gears. The amount of backlash is given in the product table for each gear.
② The mounting reference surface of the worm wheel is as shown in the figure below.
Assemble the worm wheel so that the center of the worm shaft is at the center of its tooth width.



③ As the tooth trace of worm gears is spiraled, axial thrust force is generated. Also, the directions of thrust change with the hand of helix and the direction of rotation. This is illustrated below. The bearings must be selected properly to be able to handle these thrust forces. For details, use gear calculation software GCSW.

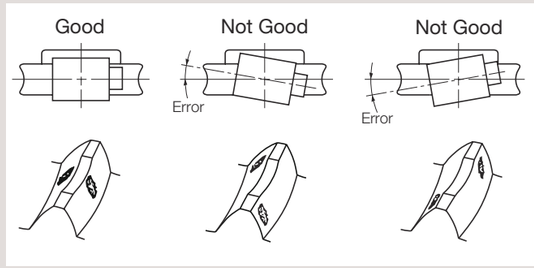


④ The worm may move due to a large thrust force that acts on the worm if it is not sufficiently attached to the shaft. Use a stepped shaft to secure the worm and shaft, and be careful not to loosen the bearing.

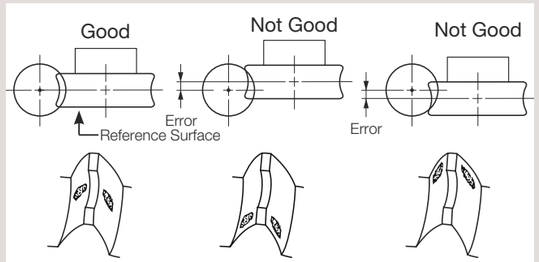
4. Confirming the installation

The wear of a worm gear is greatly affected by the quality of assembly. When assembling, confirm the following items for tooth contact and the like before use.

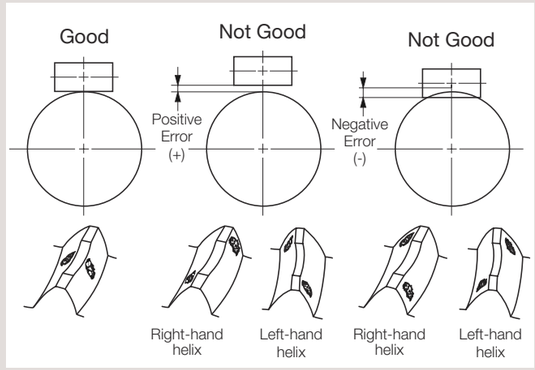
● The shaft angle tolerance between the worm shaft and worm wheel shaft is 90°±1'.



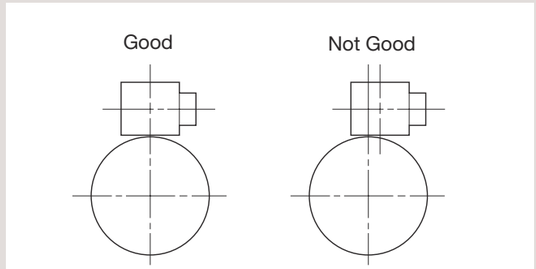
● The tolerance between the center of the worm shaft and center of the worm wheel tooth width is ±0.2 mm.



● The center distance tolerance recommended by the worm gear assembly distance is Ground Worm Gears…H7
Cut Worm Gears…H8.



● The tolerance between the center of the worm wheel shaft and center of the worm tooth width is ±2mm.



If the worm comes too close to one side, the worm wheel will not rotate correctly.

5. Cautions on Starting

① Check the following items before starting.
- Are the gears installed securely?
- Is there uneven tooth contact?
- Is there adequate backlash?
(Be sure to avoid zero-backlash.)
- Has proper lubrication been supplied?

② If gears are exposed, be sure to attach a safety cover to ensure safety. Also, be careful not to touch rotating gears.
③ If there is any abnormality such as noise or vibration during startup, stop the operation immediately and check the assembly condition such as tooth contact, eccentricity and looseness.

KHK considers safety a priority in the use of our products.
When handling, adding secondary operations, assembling, and operating KHK products, please be aware of the following issues in order to prevent accidents.

Warning: Precautions for preventing physical and property damage

1. When using KHK products, follow relevant safety regulations (Occupational Safety and Health Regulations, etc.).
2. Pay attention to the following items when installing, removing, or performing maintenance and inspection of the product.
① Turn off the power switch.
② Do not reach or crawl under the product.
③ Wear appropriate clothing and protective equipment for the work.

Caution: Cautions in Preventing Accidents

1. Before using a KHK product, read the precautions in the catalog carefully in order to use it correctly.
2. Avoid use in environments that may adversely affect the product.
3. Our products are manufactured under a superior quality control system based on the ISO9000 quality management system; if you notice any malfunctions upon purchasing a product, please contact the supplier.

Description of duplex worm gears

The usual method of adjusting the backlash of a worm gear assembly is to modify the center distance. Once assembled, such adjustment requires a major rework of the gearbox housing. The use of duplex worm gears allows the backlash adjustment to be made by axially shifting the worm. This simplifies greatly the assembly and maintenance operations. Because of the unique characteristics of the product, please take time to study its construction and proper use.

Backlash adjustment mechanism and method of adjustment

The dual-lead worm is formed to give a difference between the right tooth surface and left tooth surface so that it provides a unique tooth profile in which the tooth thickness varies continuously, corresponding with the lead difference. (Fig.1)
The worm gear is also formed in its right and left tooth surface. When such a worm and worm gear are set up at a constant assembly distance and the worm is moved in the axial direction, the tooth thickness of the worm in mesh with the worm gear changes making backlash adjustment possible.

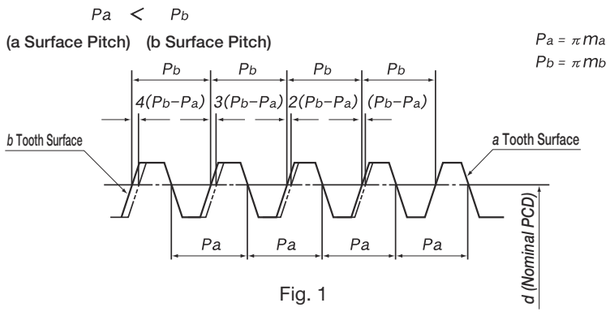


Fig. 1

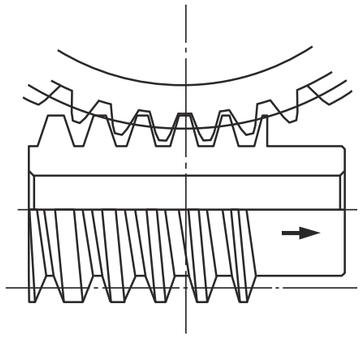
[CAUTION] The amount of change in backlash (Δ j mm) in relation to the axial movement of the duplex worm shaft (V mm) can be calculated from the formula below.

$$\Delta j = 2V \frac{m_b - m_a}{m_a + m_b}$$

Where
m_a = Nominal Axial Module - (0.01× Nominal Axial Module)
m_b= Nominal Axial Module + (0.01× Nominal Axial Module)

An arrow marking on the outer circumference of the hub of the KHK duplex worm indicates the direction of assembly as well as acts as a direction for the backlash adjustment. When the worm is held with arrow mark pointing right, the tooth thickness is thinner on the right and thicker on the left. Therefore, moving the worm to the right causes the thicker teeth to come into actual engagement with the worm gear, thereby reducing the backlash. (Fig.2)



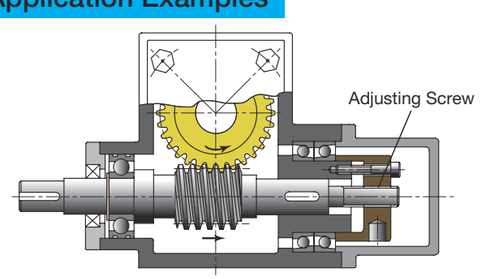
Reference Tooth
Moving the worm in the direction of the arrow diminishes the backlash.

Fig. 2

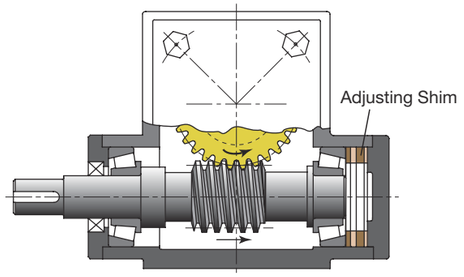
[CAUTION] The KHK duplex worm is designed so that, for all modules, the backlash reduces by 0.02 mm when the worm is shifted 1 mm.

Application Examples

* The illustration is a design example, not a design for machinery or a device in actual use.



Adjustment by using Screws

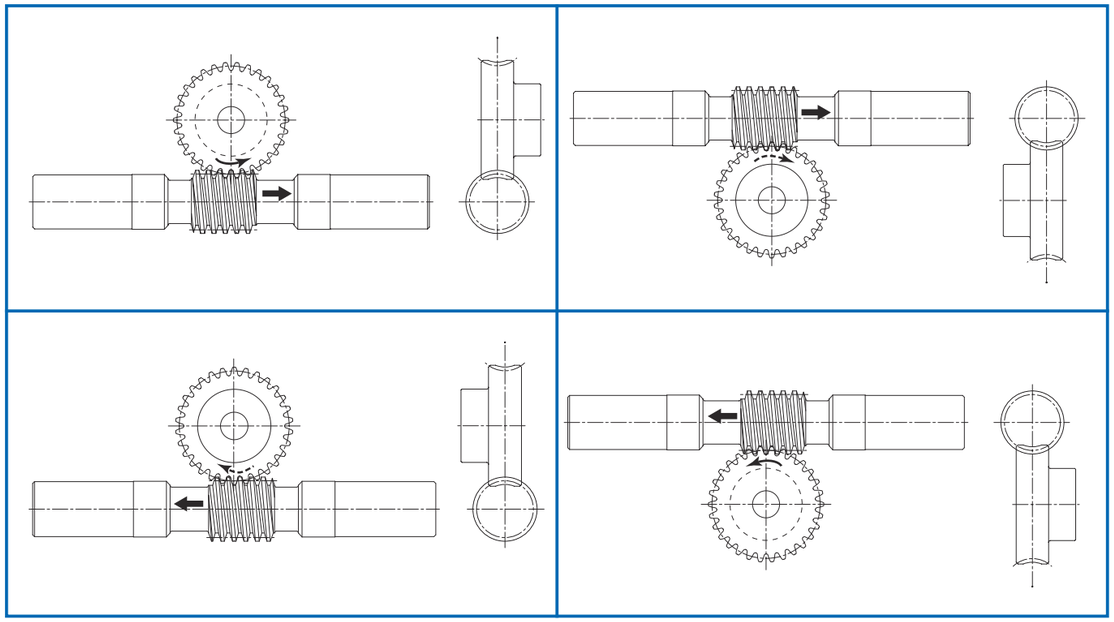


Adjustment by using Shims

Points of caution during assembly

KHK duplex worm gears differ in module between the right and left tooth surface and, therefore, you must orient the worm and worm wheel properly. Please carefully verify the following two aspects before proceeding with assembly.

1. Verifying the orientation of assembly
   An arrow indicating the orientation of assembly is stamped on both the duplex worm and worm wheel. When assembling the worm and worm wheel, check the worm wheel of the arrow mark on the front such that the direction of arrow mark on the worm coincides with that on the worm wheel. Incorrect assembly results in difficulty of assembly and improper gear engagement. (Fig.3)



Arrow mark indicates the correct orientation of two gears when assembled. As shown, the two arrows must point in the same direction.
Fig. 3

2. Verifying the reference position
   A V-groove (60°, 0.3 mm deep line) on tip peripheral of the duplex worm tooth marks the reference tooth. The gear set is designated to have a backlash of nearly zero (tolerance: ±0.045) when the reference tooth is positioned in alignment with the center of rotation of the worm wheel with the center distance set at the value “a”. (Fig.4)

KWGDL/KWGDLS Duplex Worms

Specifications	
Precision grade	KHK W 001 grade 1
Reference section of gear	Axial direction
Gear teeth	Standard full depth
Normal pressure angle	17°30'
Material	SCM440
Heat treatment	Thermal refined, gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for ground part

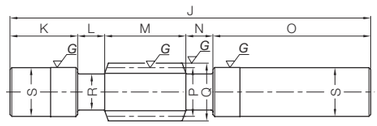
KWG Module 2, 2.5
Ground Worm Shafts

Specifications	
Precision grade	KHK W 001 grade 2
Reference section of gear	Axial direction
Gear teeth	Standard full depth
Normal pressure angle	20°
Material	SCM440
Heat treatment	Thermal refined, gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coated except for ground part



W6

* For products not categorized in our KHK Stock Gear series, custom gear production services with short lead times are available.
Please see Page 26 for more details about custom-made orders.

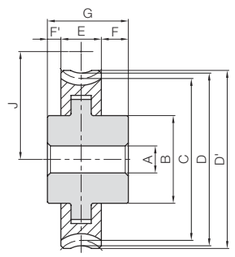
AGF Module 2, 2.5
Worm Wheels

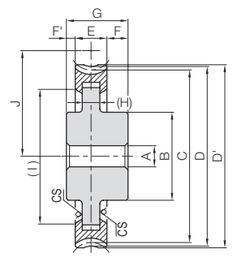
Specifications	
Precision grade	KHK W 002 grade 2
Reference section of gear	Rotating plane
Gear teeth	Standard full depth
Normal pressure angle	20°
Material	CAC702 (old JIS A ℓ BC2) *
Heat treatment	—
Tooth hardness	—

* The hub material of H8 and H9 is FC200.
FC200's tensile strength (200N/mm^2) is derived from test specimens and does not represent that of the boss.

H6



H8



H9

* CS has a forged finish surface.

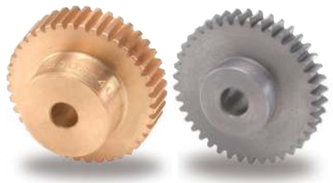
BG/CG Module 1, 1.25 Worm Wheels



Specifications		
Catalog Number	BG	CG
Precision grade	KHK W 002 grade 4*	
Reference section of gear	Normal plane	
Gear teeth	Standard full depth	
Normal pressure angle	20°	
Material	CAC502 (old JIS PBC2)	FC200**
Heat treatment	—	
Tooth hardness	—	

* The precision grade of J Series products is equivalent to the value shown in the table.

** FC200's tensile strength (200N/mm²) is derived from test specimens and differs according to the product shape.

A_{H7}	Bore
B	Hub dia.
C	Pitch dia.
D	Throat dia.
D'	Outside dia.
E	Face width
F	Hub width
G	Total length
J	Mounting distance

SW Module 1.5
Worms

Specifications	
Precision grade	KHK W 001 grade 4*
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Normal pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating

* The precision grade of J Series products is equivalent to the value shown in the table.

SW Module 2.5
Worms

Specifications	
Precision grade	KHK W 001 grade 4*
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Normal pressure angle	20°
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating

* The precision grade of J Series products is equivalent to the value shown in the table.

SW Module 4
Worms

Specifications	
Precision grade	KHK W 001 grade 4
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Normal pressure angle	14°30’
Material	S45C
Heat treatment	—
Tooth hardness	(less than 194HB)
Surface treatment	Black oxide coating

* In regard to MC Nylon gears, other materials are available for plastic gears, including Ultra High Molecular Weight Polyethylene (U-PE), which has excellent abrasion resistance Poly Ether Ether Ketone (PEEK) also has quality properties. A single piece order is acceptable and will be produced as a custom-made gear. Please see Page 26 for more details on quotations and orders.

[Cautions on Secondary Operations Series] ① Secondary operations series include the J Series, F Series, R Series, E Series, Hardened Plus, Hardened Plus J Series, Semi-custom Products, and Semi-custom J Series.
② Because products are machined upon order receipt, cancellation is not possible. For lead times and allowable order sizes, see the Delivery Date Guide on Page 38.

PG Module 2, 2.5, 3 Worm Wheels

Specifications	
Precision grade	KHK W 002 grade 5*
Reference section of gear	Normal plane
Gear teeth	Standard full depth
Normal pressure angle	14°30'**
Material	MC901
Heat treatment	—
Tooth hardness	—

* The precision grade is equivalent to the value shown in the table.
** The pressure angle of module 2.5 is 20°.

A	Bore
B	Hub dia.
C	Pitch dia.
D	Throat dia.
D'	Outside dia.
E	Face width
F	Hub width
G	Total length
J	Mounting distance

Product Precautions → Page 398
Precautions for Standard Machined Products → Pages 38~40

Custom-made worm gears are available.

KHK offers high-precision products.

◆ Production Range
Module : 0.5~10
Worm outer diameter : ϕ100 mm or less
Wheel outer diameter : ϕ600 mm or less
Assembly distance : 350 mm or less

Please see Page 26 for more details about custom-made orders.

High-precision ground gear technology achieves high speed and quiet movement.

Excellent tooth contact and appropriate backlash are essential for worm gears. Give KHK's reliable stock worm gears a try.

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Gearboxes

K BX - 10 1 L

- L: Type (L)
- 1: Gear Ratio (1)
- 10: Shaft Diameter (4 mm)
- BX: Type (Bevel Gearboxes)
- K: Case Material (Light Alloy)

Case Material		Type	
K	Light Alloy	BX	Bevel Gearboxes
C	FC250		

■ Features

① Compact

The structure is simple and the case is made of aluminum die-cast

② Low-noise and high-efficiency

Uses spiral bevel gears that are made of carburized special steel

③ Flexible mounting direction

Can be installed in all directions and is easy to install

④ Maintenance-free

Shipped with high-grade grease enclosed

⑤ Gear ratio

Gear ratio of 1 and 2 can be selected according to the application

■ Lubrication

Lubricating oil of specified amount is enclosed at the time of shipment.

Machine Type	Approximate amount of oil	Lubricant type	
KBX-10 KBX-15 KBX-20	10g 30g 50g	Grease	NLGI-00 with Li extreme pressure additive

■ Application Hints

1. Installation Location

① Ambient temperature : −10°C to 40°C
② Ambient humidity : 80% or less
③ Atmosphere : A space free of corrosive gas and steam
A well-ventilated space free of dust and dirt
④ Installation location : Indoors

2. Installation Method

① Securely fix the mounting surface to a machined flat surface without vibration using bolts.
② No secondary operations such as boring can be made on the case. Also, do not disassemble or modify the product. If the device is damaged, the product will not be covered by the warranty.
③ For devices for which oil must be avoided such as food machinery, be sure to take measures to prevent damage such as oil reservoir in case of oil leakage due to failure, aging, etc.

3. Connection with the mating machine

① Check the rotation direction before connecting to the mating machine. There is a risk of the device being damaged due to difference in rotation direction.
② When attaching the coupling, sprocket, pulley, gear or the like to the shaft of the gear box, make sure that it does not interfere with the oil seal or case surface in models that have no steps on the shaft. We also recommend H7 for hole fitting.
③ For direct connection, locate the center accurately so that the axial center of the gear box and mating axis match. We also recommend using flexible fastening supplies.
④ When using a chain, belt or gear, make sure that the gear box shaft and mating shaft are parallel, and install it so that the line connecting the centers of two shafts is perpendicular to the shafts.

4. Precautions during driving

① Do not approach or touch rotating objects such as the shafts during operation. There is a risk of entanglement and injury.
② If there is abnormal noise or temperature rise, stop the operation immediately and do not operate until the cause of the abnormality is investigated and measures are taken.
③ Forward and reverse rotations due to plucking adversely affect the gear box and mating machine, so be sure to stop the unit and then start in the opposite direction.
④ Be sure to set the load torque and O.H.L. (overhang load) within the permissible values before operation.

■ KBX Performance Table

Speed ratio	Model Code	Specification Symbol	X-axis Rotation Speed (rpm) 50	100	200	300	400	600	900	1200	1500	1800	2500	3600	Allowable Thrust Load (N) {kgf} X-axis	Y-axis

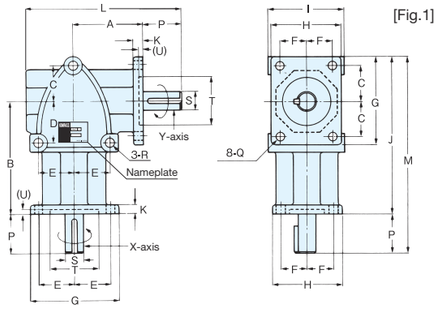
[Note] ① Be sure to use the product below the permissible values. The speed ratio (1:2) decelerates to the Y axis.
② The values in this performance table are where the service factor is 1. When using the product under other conditions, refer to the Selection Guide.
③ O.H.L. (overhang load) is the allowable load that can be applied to the center of the shaft. When using the product under other conditions, refer to the coefficients K_1 and K_2 in the Selection Guide (Page 460).
④ When the speed ratio (1:2) type is used at increased speed (from Y-axis to X-axis), the allowable X-axis torque is 1/2 of the value in the performance table (allowable Y-axis torque).
⑤ Y-axis torque of the model T is the total value of the left and right axes.
⑥ Y-axis O.H.L. of the model T is the total value of the left and right axes.



[Fig.1]

[NOTES]
① The rotation direction of the arrow does not limit the direction. Both the forward and reverse rotations are allowed.
② The X-axis rotates clockwise and the Y-axis rotates counterclockwise.
③ The phases of the X-axis and Y-axis key grooves do not always match.
④ The shaft diameter tolerance is JIS h7.
⑤ The 1:2 speed ratio type decelerates from the X-axis (input axis) to the Y-axis (output axis).
⑥ JIS B 1301-1976 (normal) is used for the key dimensions
⑦ The indicated angular backlash is reference values measured on the X-axis (input axis).

Shaft arrangement and shaft arrangement numbers

The CBX bevel box standardizes 24 different shaft arrangements depending on the rotation direction of the shaft. When using the product, consider not only the catalog number but also the shaft arrangement.

[NOTES]
① This figure shows the mounting base and flat surface mounting (floor mounting).
② The rotation direction of the arrow does not limit the direction. Both the forward and reverse rotations are allowed.
③ ▼ indicates the wall surface with fuel filler port and drain plug when mounted on a flat surface (floor mounting). Unmarked items are the back of this figure. (standard specifications)
④ Shaft arrangement: For products other than LI to LL and TE to TF, the input shaft (X-axis) cannot be installed facing upward.
⑤ When installing the product other than on a flat surface, consider adding an oil drain port (Page 459).

Features

① Tough
High-grade cast iron is used for the case and tapered roller bearing is used for the bearing

② Low-noise and high-efficiency
Uses spiral bevel gears that are made of carburized special steel

③ Flexible mounting direction
Various installations are possible depending on the shaft arrangement

④ Lubricant enclosed
High-grade oil enclosed upon shipment

⑤ Speed ratio
Gear ratio of 1/1 and 1/2 can be selected according to the applications

Lubrication

Lubricating oil of specified amount is enclosed at the time of shipment.

Machine Type	Approximate amount of oil	Lubricant type	
CBX-19 CBX-25 CBX-32 CBX-40	0.3L 0.7L 1.0L 1.5L	Oil	JIS gear oil Class 2 for industrial use

Application Hints

Refer to KBX (Page 452).

[Note] ① Be sure to use the product below the permissible values. The speed ratio (1:2) decelerates to the Y axis.
② The values in this performance table are where the service factor is 1. When using the product under other conditions, refer to Table 1 (Page 460) Service Factors.
③ O.H.L. (overhang load) is the allowable load that can be applied to the center of the shaft length. When using the product under other conditions, refer to the coefficients K_1 and K_2 in Table 2 and 3 (Page 460).
④ When the speed ratio (1:2) type is used at increased speed (from Y-axis to X-axis), the allowable X-axis torque is 1/2 of the value in the performance table (allowable Y-axis torque).
⑤ Y-axis torque of the model CBX-T is the total value of the left and right axes.
⑥ Y-axis O.H.L. of the model CBX-T is the total value of the left and right axes.
⑦ The allowable thrust load is half of respective O.H.L. value.

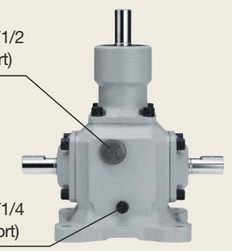
[NOTES]

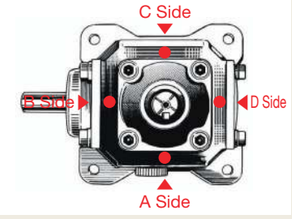
① The phases of the X-axis and Y-axis key grooves do not always match.
② The shaft diameter tolerance is JIS h6.
③ JIS B 1301-1976 (normal) is used for the key dimensions
④ The indicated angular backlash is reference values measured on the X-axis (input axis).
⑤ The standard specifications of the oil plug are flat surface mounting (floor mounting), oil filler port → PF1/2, and oil drain port → PT1/4.
When mounting on the ceiling or on the wall, an oil drain port can be added to the position shown in the figure below as a custom order.

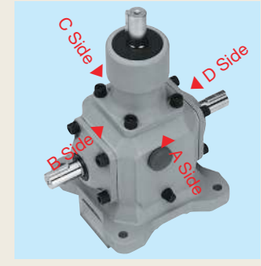
■ Standard specifications



■ Oil drain port added (estimated separately)

● Oil plug drain port PT1/4 can be added at the marked location. Please make the request when asking for a quote.





* The side with the standard oil plug is the A side, and B, C and D are displayed clockwise when viewed from above.

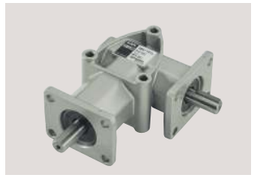
Bevel Box Selection Guide

■ Selection Guide



KBX-L

KBX-T

Items required for selection

Load torque, prime mover type, input rotation speed, speed ratio, operating time, connection method, frequency of start/stop

Selection Procedure

The performance table in the catalog is where the load is uniform, the prime mover is a motor and the operating time is 10 hours/day.

A) When using under other conditions, correct the load torque according to the Service Factors in <Table 1>.

Corrected load torque = Load torque applied to the gear box × Service factor <See Table 1>

Service Factor (Sf) <Table 1>

Load State	Service Factor (Sf)		
	Operation of 3H or less / day	Operation of 3~10H / day	Operation of 10H or more / day
Uniform load	1 (1)	1 (1.25)	1.25 (1.50)
Light impact load	1 (1.25)	1.25 (1.50)	1.50 (1.75)
Severe impact load	1.25 (1.50)	1.50 (1.75)	1.75 (2.00)

(Note) 1. If the frequency of start/stop is 10 times or more per hour, the coefficient in parentheses will be used.
2. For a prime mover other than electric motor is used (engine, etc.), the coefficient in parentheses will also be used.

Make sure that the corrected load torque is smaller than the X/Y-axis allowable torque or the Y-axis allowable torque in the performance table at the operating rotation speed.

B) For the shaft arrangement, select from the Shaft Arrangement Diagram of respective model.

C) Confirming the overhang load (O.H.L.)
Overhang load (O.H.L.) is a suspended load acting on the shaft. The O.H.L. must be considered if a chain, belt, gear or the like is used to connect the gear box shaft and mating machine.

$$O.H.L. = \frac{T_{LE} \times K_1 \times K_2}{R} \text{ (N) \{kgf\}}$$

T_{LE} : Corrected load torque (N·m) {kgf·m} applied to the gear box shaft
R : Pitch circle radius (m) of a sprocket, pulley, gear or the like attached to the gear box shaft
K_1 : Coefficient by connection method <See Table 2>
K_2 : Coefficient by load position <See Table 3>
* Make sure that the O.H.L. calculated using the above formula is smaller than the allowable O.H.L. for the X-axis and Y-axis shown in the performance table.

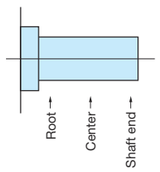
Coefficient K_1 <Table 2>

Connection method	K_1
Chain, timing belt	1.00
Gear	1.25
V-belt	1.50

Coefficient K_2 <Table 3>

Load position	K_2
Shaft root	0.75
Shaft center	1.00
Shaft end	1.50

● Load position



D) Select a model that satisfies all of A), B) and C) obtained using the above formula.

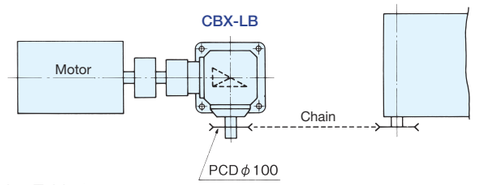
■ Selection Example

CBX-L

CBX-T

Selection example 1

Application / Conveyor (uniform load)
Load torque / 78.4N·m {8kgf·m}
X-axis rotation speed / 300rpm
Speed ratio / 1:2
Shaft arrangement / As shown in the diagram on the right
Operating time / 12 hours/day
Connection method / X-axis - Coupling
Y-axis - Chain (located in the center of the shaft)
Installation method / Horizontal mounting
Installation location / Indoors



① Considering the torque

The service factor based on the load status is Sf = 1.25 as shown in <Table 1>.
Therefore, the corrected load torque applied to the Y-axis is:
T_{LE} = 78.4×1.25 = 98N·m {T_{LE} = 8×1.25 = 10kgf·m}.

② Considering the O.H.L.

The load O.H.L. of Y-axis is:

$$O.H.L. = \frac{T_{LE} \times K_1 \times K_2}{R} = \frac{98 \times 1 \times 1}{\frac{100}{2 \times 1000}} = 1960N \quad \{ O.H.L. = \frac{T_{LE} \times K_1 \times K_2}{R} = \frac{10 \times 1 \times 1}{\frac{100}{2 \times 1000}} = 200kgf \}$$

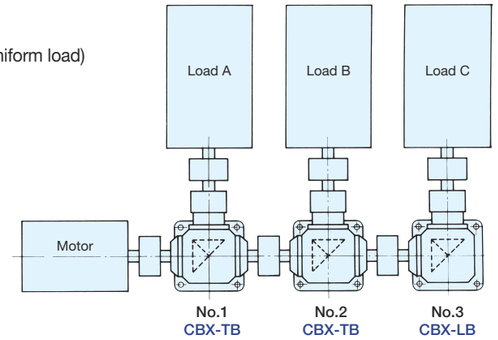
③ Determining the model

A model that satisfies all the conditions, torque and O.H.L. is **CBX-322LB**.

Selection example 2

Application / Line shaft drive
Load torque / Load A, B, and C are 58.8N·m {6kgf·m} respectively (uniform load)
Rotation speed / 600rpm
Speed ratio / 1:1
Shaft arrangement / As shown in the diagram on the right
Operating time / 8 hours/day
Connection method / All coupling
Installation method / Horizontal mounting
Installation location / Indoors

For line shaft drive, the load applied to the Y-axis differs depending on the position of the gear box, so it is necessary to select each separately. The Service Factors <Table 1> based on the conditions are all Sf = 1.0.



① Gearboxes No.1

The corrected load torque applied to the X-axis drives only load A.
Therefore, 58.8 × 1.0 = 58.8 N·m {6 × 1.0 = 6 kgf·m}
The corrected load torque applied to the Y-axis drives loads A, B and C.
Therefore, (58.8 + 58.8 + 58.8) × 1.0 = 176.4 N·m
{(6 + 6 + 6) × 1.0 = 18kgf·m}
Based on the performance table, **CBX-401TB** is selected.

② Gearboxes No.2

The corrected load torque applied to the X-axis drives only load B.
Therefore, 58.8 × 1.0 = 58.8 N·m {6 × 1.0 = 6 kgf·m}
The corrected load torque applied to the Y-axis drives loads B and C.
Therefore, (58.8 + 58.8) × 1.0 = 117.6N·m
{(6 + 6) × 1.0 = 12kgf·m}
Based on the performance table, **CBX-321TB** is selected.

③ Gearboxes No.3

The corrected load torque applied to the X-axis drives only load C.
Therefore, 58.8 × 1.0 = 58.8 N·m {6 × 1.0 = 6 kgf·m}
The corrected load torque applied to the Y-axis drives only load C.
Therefore, 58.8 × 1.0 = 58.8 N·m {6 × 1.0 = 6 kgf·m}
Based on the performance table, **CBX-251LB** is selected.

④ Determining the model

No.1 Gear Box **CBX-401TB**
No.2 Gear Box **CBX-321TB**
No.3 Gear Box **CBX-251LB**

Catalog Number of KHK Stock Gears

The Catalog Number for KHK stock gears is based on the simple formula listed below. Please order KHK gears by specifying the Catalog Numbers.

(Example) Other Products

S V 20 - 200

- S: Material (S45C)
- V: Type (Involute Spline Shafts)
- 20: Outer diameter (20mm)
- 200: Total Length (200mm)

Material

S	S45C

Type

RT	Ratchets
GC	Gear Couplings
V	Involute Spline

SRT Pitch 2.09~12.57 Ratchets

Specifications	
Tooth groove angle	60°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coating

[Caution on Product Characteristics] ① The bore may slightly vary due to the effect of heat treatment. When using with the indicated hole diameter, provide machining with a reamer or the like before use.

[Caution on Secondary Operations] ① Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

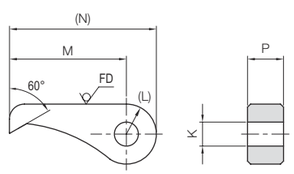
[Caution on J series] ① As available-on-request products, these require a lead-time for shipping of 2 working days (excludes the day ordered), after placing an order. Because the machining starts immediately, we cannot accept cancellations. Please see Page 38 for more details.
② Number of pieces we can process for one order is 1 to 20 units. For larger quantities, please request price and delivery quotes.
③ Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that tooth phase matching is not performed.
④ Black oxide is not re-applied after hole and key secondary operations.
⑤ Certain products which would otherwise have a very long tapped hole are counterbored. Please see the website for more details.

SRT-C Pitch 2.09~12.57 Ratchet Pawls

Specifications	
Tooth angle	60°
Material	S45C
Heat treatment	Pawl induction hardened
Pawl hardness	50 to 60HRC
Surface treatment	Black oxide coating



* FD has a forged finish surface.

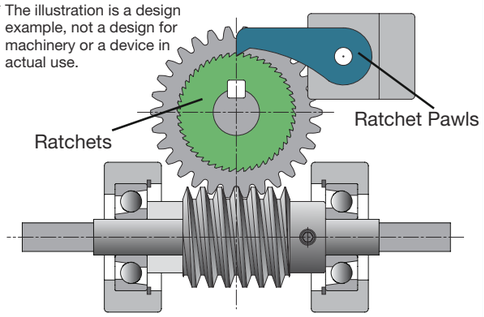
T5

Catalog Number	Shape	K	(L)	M	(N)	P	Weight (kg)
SRT2/3-C		5	(8)	30	(38)	6	0.020
SRT1-C		8	(10)	39	(49)	12	0.057
SRT2-C	T5	10	(12.5)	55	(67.5)	15	0.13
SRT3-C		12	(15)	65	(80)	20	0.23
SRT4-C		13	(18)	80	(98)	25	0.38

[Caution on Product Characteristics] ① The ratchet pawl is for preventing reverse rotation. It cannot be used for feeding or indexing.
② SRT2/3-C is a lost wax product that uses S45C-equivalent material.

Application Examples

* The illustration is a design example, not a design for machinery or a device in actual use.



Example: ratchets used for complete reverse prevention of worm gears

Bending Strength of Ratchets

The allowable transmission force F_b (N) of ratchets is the value calculated by the following formula.

$$F_b=\sigma_b \cdot \frac{b \cdot e^2}{6} \cdot \frac{1}{h} \cdot \frac{1}{S_F}$$

Also, the SRT Ratchet's allowable torque T (N·m) for bending strength is calculated by the following formula.

$$T=F_b \cdot r_f$$

Where

σ_b : Bending stress → Assumed 225.55MPa (23kgf/mm^2)
b : Face width mm → Dimension Table ratchet face width E
e : Root length mm
→ $e=h \times \tan\left(60\text{-}\frac{360}{\text{No. of teeth}}\right)$ is the calculation
h : Depth of teeth mm → Dimension Table ratchet tooth depth H
S_F : Safety factor → Assumed 2
r_f : Tooth root radius m
→ $r_f=\frac{\text{Outside dia. D}-2h}{2000}$ is the calculation

For information on misprints in the catalog, please visit our website.

[Caution on Product Characteristics] ① For the ratchet with SRTB hub, pay attention to the orientation of the teeth with respect to the hub. Items with opposite orientation can be made to order.
② The bore may slightly vary due to the effect of heat treatment. When using with the indicated hole diameter, provide machining with a reamer or the like before use.

[Caution on Secondary Operations] ① Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

[Precautions for Made to Order Products] Prices and lead times for Made to Order products require separate estimates. Contact your dealer.

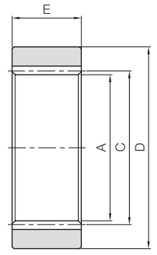
[Caution on J series] ① As available-on-request products, these require a lead-time for shipping of 2 working days (excludes the day ordered), after placing an order. Because the machining starts immediately, we cannot accept cancellations. Please see Page 38 for more details.
② Number of pieces we can process for one order is 1 to 20 units. For larger quantities, please request price and delivery quotes.
③ Keyways are made according to JIS B1301 standards, Js9 tolerance. Also note that tooth phase matching is not performed.
④ Certain products which would otherwise have a very long tapped hole are counterbored. Please see the Website for more details.
⑤ Areas of products which have been re-worked will not be black oxide coated.
⑥ For products having a tapped hole, a set screw is included.
⑦ Products marked with an * have a bore tolerance of H8.

Gear Couplings (Outer Rings)

Specifications	
Gear teeth	Standard full depth
Pressure angle	20°
Material	S45C
Heat treatment	Gear teeth induction hardened
Tooth hardness	50 to 60HRC
Surface treatment	Black oxide coating



T1

Catalog Number	Module	No. of teeth	Shape	Inside dia.	Pitch dia.	Outside dia.	Face width	Backlash (mm)	Weight (kg)
				A	C	D	E		
GC1-I	***m*2**	25	T1	46	50	68	25	0.40~0.60	0.33
GC2-I	***m*2**	40		76	80	105	36		1.03
GC3-I	***m*2.5**	42		100	105	145	48		2.96

[Caution on Secondary Operations] ① Due to the gear teeth being induction hardened, no secondary operations can be performed on tooth areas including the bottom land (approx. 2 to 3 mm).

■ Characteristics of Gear Couplings

- There are many ways to couple shafts to transmit power. We have developed these standardized gear couplings of our own design. They are easier to connect or disconnect than chain couplings.
- As the external gear (inner cylinder) is crowned, the shaft angle can be up to 5°.
- Due to the induction hardened gear teeth, these couplings have excellent durability.
- The GCJ units are machined complete with keyways, set screw holes and finished bores and are ready for immediate installation. We also offer minimum bore models for users who want to perform their own secondary operations.

■ Gear Coupling Ordering Method

Gear coupling outer rings and inner hubs can each be purchased individually: however, normal usage requires a set of 1 outer ring and 2 inner hubs.

<E.g.> For 1 set of GC2-20S
GC2-I (outer ring) x 1 piece and GC2-20S (inner hub) x 2 piece set.

■ Strength of Gear Couplings

The allowable torques of the gear couplings are determined in accordance with the shear strength of the keys.
Allowable shear force of keys F (N) is calculated from the following formula.

$$F=b\cdot L\cdot\sigma\cdot\frac{1}{S}$$

Additionally, allowable torques T(N·m) of the inner hubs of the GC gear coupling is calculated using the following formula.

$$T=\frac{F\cdot d}{2000}$$

b : Key Width mm → Keyway width of inner hubs of the GC Gear Coupling
L : Key Length mm → Set at G-2 mm from the total length of the inner hub of the GC Gear Coupling
σ : Allowable Shear Force of keys → Set at 49MPa (5kgf/mm^2)
S : Safety Factor → Optionally set
d : Bore size (mm) → Bore size A of the inner hub of the GC Gear Coupling

Caution: Safety Factor (S) must be set at a value between 1 to 3, depending on the load types or the coupling displacement.

Involute Spline Shafts

Specifications	
Gear teeth	Stub teeth
Pressure angle	20°
Material	S45C
Heat treatment	Thermal refined
Tooth hardness	200 to 270HB
Surface treatment	Black oxide coating

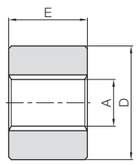
[Caution on Secondary Operations] ① When modifying the SV involute spline shaft with secondary operations, be careful not to crush the teeth or bend the shaft.

■ Characteristics of Involute Spline Shafts

- SV and SVI series are made according to the automotive involute spline standard, JIS B 1603: 1995 (Straight cylindrical involute splines, backlash 0.06 to 0.15).
- Involute spline shafts and bushings are thermal refined to have good abrasion-resistance.
- Spline bushings may be made in CAC (copper) type material as a special custom order item.

Involute Spline Bushings

Specifications	
Gear teeth	Stub teeth
Pressure angle	20°
Material	S45C
Heat treatment	Thermal refined
Tooth hardness	200 to 270HB
Surface treatment	Black oxide coating



T1

Catalog Number	Module	No. of teeth	Shape	Outside dia. A	Outside dia. D	Face width E	Allowable torque (N·m) Surface durability	Allowable torque (kgf·m) Surface durability	Backlash (mm)	Weight (kg)

[Caution on Product Characteristics] ① The allowable torque shown are reference values calculated from “Surface strength of splines” on Page 471.
② Lubrication is always required on the mating surface of the spline shaft and hub.

■ Surface Strength of Splines

The design concept of the spline surface strength is the same as that of a key. Here is the formula for the allowable transmission force F(N) of spline.

$$F=\eta \cdot z \cdot h_w \cdot l \cdot \sigma$$

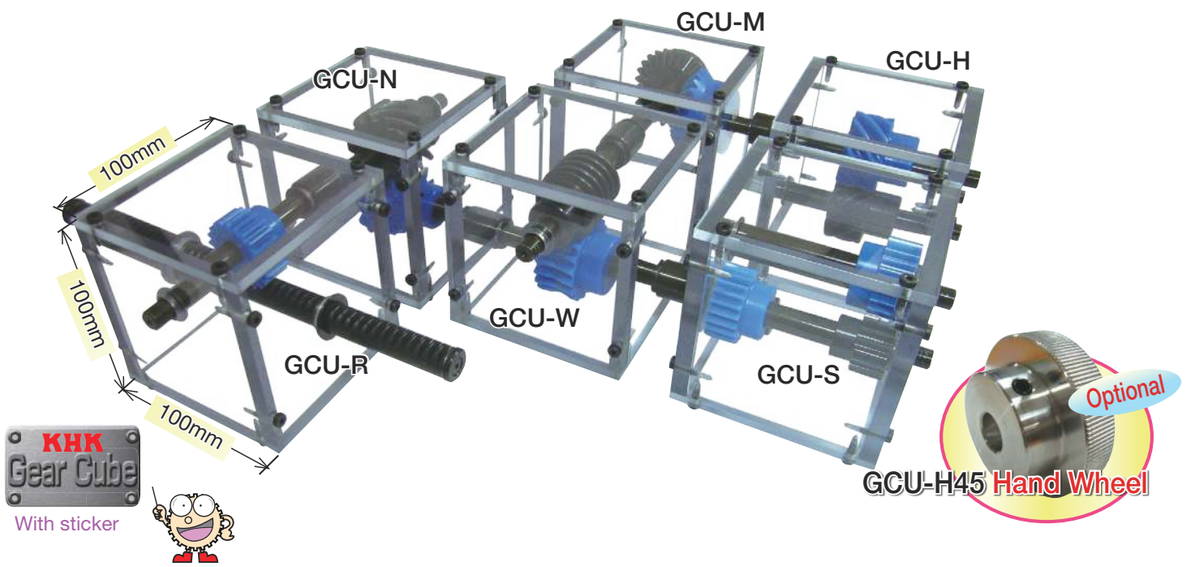
And the formula of allowable torque T (N·m) of spline with respect to the surface strength.

$$T=\frac{F \cdot d_w}{2000}$$

In designing a spline shaft, besides considering the surface strength, we should take into account the torsional and bending stresses of the spline.
Where

η : Contact ratio of surface → 0.75 (assumed)
z : Number of teeth → number of teeth of spline from the table
h_w : Contact depth of tooth (mm) → 1.485
l : Contact length of spline → spline hub face width E from the table
σ : Allowable surface stress of spline → 19.61MPa (2kgf/mm^2) (assumed)
d_w : Contact diameter (mm) → Tip diameter of spline shaft D - h_w

See the gears with your own eyes and move them with your own hands to learn about their mechanisms and characteristics.



* These kits are not for actual use to transmit power. Please use only as representations of gear systems.

KAWAGUCHI i-mono
This product is certified by KAWAGUCHI i-mono i-waza

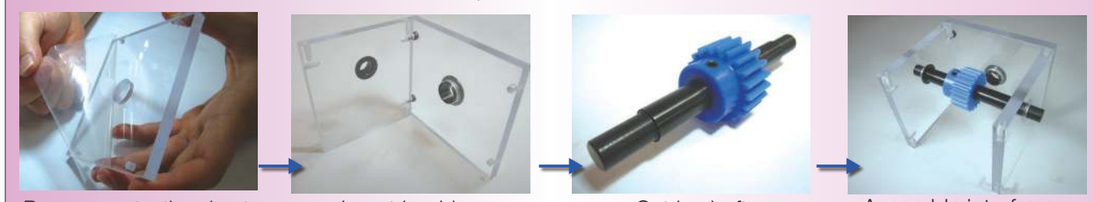
■ Features of GearCube

- Assembly kits can be connected flexibly.
- The frame is made of polycarbonate with high transparency and impact resistance.
- Gears combine MC nylon and metal, making lubrication unnecessary.
- An instruction manual is included, enabling easily assembly by anyone.

Assembly Procedure

Details are available on the Japanese website

Photo shows GCU-R



All six types of assembly kit and input/output shafts can be connected.

GCU-S Spur Gear Kit

Installation: Parallel Axes (Two-stage)
Gear Type: Spur Gear
Used Product: 2 units of SS1.5-16
2 units of PS1.5-22
Gear Ratio: 1.89
Weight: Approx. 1kg

The Gear Kit contains a two-stage spur gear train and allows speed increases / reductions, and includes the most commonly used combinations of gears.

GCU-H Helical Gear Kit

Installation: Parallel Axes
Gear Type: Helical Gears (also for Screw Gears)
Gears: SN2.5-10L
PN2.5-10R
Gear Ratio: 1
Weight: Approx. 1kg

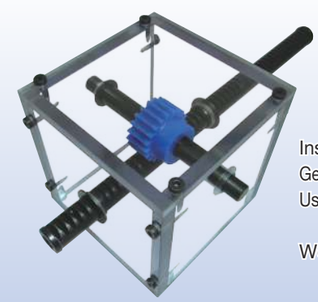
Helical gears have more strength than spur gears of the same dimensions and have the advantage of being less noisy.

GCU-M Miter Gear Kit

Installation: Intersecting Axes
Gear Type: Miter
Gears: SM2-25
PM2-25
Gear Ratio: 1
Weight: Approx. 1kg

The shaft angle of bevel gears can be changed by 90°.
It is used to change the direction of the power.

GCU-R Rack Kit



Installation: Parallel Axes
Gear Type: Racks & Pinions
Used Product: SRO1.5-500
PS1.5-20
Weight: Approx. 1kg

Racks can be used to convert rotation to linear. They are used for elevating devices, etc.

GCU-N Screw Gear Kit

Installation: Nonparallel and nonintersecting gears
Gear Type: Screw Gears
Gears: SN2.5-10R
PN2.5-10R
Gear Ratio: 1
Weight: Approx. 1kg

Screw Gears are helical gears used in nonparallel and nonintersecting situations. Applications include devices like conveyers with light loads.

GCU-W Worm Gear Pair Kit

Installation: Nonparallel and nonintersecting gears
Gear Type: Worm Gear Pair
Gears: SW2-R1
PG2-20R1
Gear Ratio: 20
Weight: Approx. 1kg

Large deceleration can be made in one step. The worm gear cannot be driven by the worm wheel due to inherent self-locking.

System Configuration

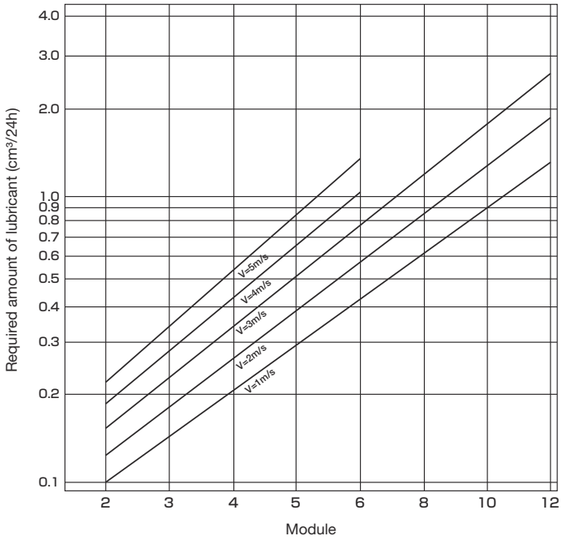
NO.	Product Name
1	Flex pump
2	Grease cartridge
3	Tube connector
4	Tube
5	Mounting shaft
6	Lubricating gear

Features

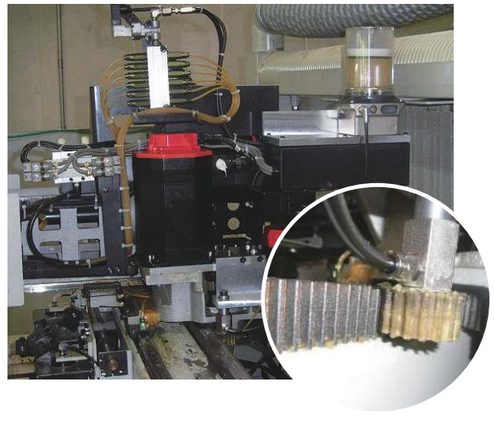
- Ideal lubrication system for racks & pinions used in open environments.
- A small amount of grease extruded from the pump is automatically supplied through the lubricating gear.
- The amount of lubricant* can be adjusted according to the application.
- If pump errors are detected, an error signal is emitted.
- Grease is applied by a polyurethane lubricating gear to form a uniform lubricating film.
- Grease up to consistency No. 2 can be used regardless of the manufacturer.
- Special grease GC-F01 does not drip or pollute the machine.
- Optimized lubricant improves the durability of racks & pinions and reduces the maintenance costs.

* Please use the required amount of lubricant in Table 1 as a guide depending on the module of the product used and the peripheral speed (m/s).

Table 1. Required amount of lubricant



Application Examples



Flex pump FP401

CE Mark compatible product.

24 VDC automatic time controlled lubrication pump (1-port type)

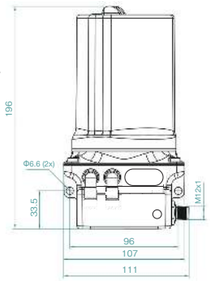
* A tube connector (right angle type) and power cable (5m) are included.

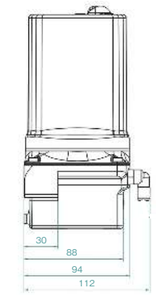
Flex pump FP402

CE Mark compatible product.

24 VDC automatic time controlled lubrication pump (2-port type)

* A tube connector (right angle type) and power cable (5m) are included.





Flex pump FP400B

CE Mark compatible product.

6 V battery automatic time controlled lubrication pump (1-port type)

*A tube connector (right angle type) and 6V battery are included.

Specifications	
Dimensions (W x H x D)	Max: 111 x 198.5 x 108mm
Weight (no lubricant)	1450g
Operation method	Piston pump type
Lubricating oil amount	400cm³
Minimum lubricant supply amount	0.15cm³
Operating pressure	Up to 70 bar
Lubricant	Grease of consistency up to NLGI No. 2
Operating temperature	-25 to 70°C
Operating voltage	24 VDC (battery type is 6V)
Consumption voltage (24 VDC)	I_{max}≤350mA
Mounting direction	Omni-directional mounting available
Control device	Built-in, electronic type
Pressure monitor	Built-in, electronic type
Lubricant level monitor	Built-in, lead contact type
Error detection	Grease shortage / back pressure increase / battery level decrease
Dustproof/waterproof class	IEC Standard IP54

Grease cartridge GC-F01

Special grease that contains additives considering the optimum adhesion to metal surfaces.
Ideal for racks & pinions used in high-temperature and high-load environments.

(Empty cartridge GC-0)

Specifications	
Consistency number	No. 1
Dropping point	220°C
Operating temperature range	-30 to 150°C
Withstand pressure load	4800N
Internal capacity	400cm³

Tube T-6×4-5 T-6×4-10

This tube has excellent pressure resistance, elasticity, restoring force and bending strength.
GC-F01 grease is provided before shipment.

Specifications		
Product Name	Material	Outer diameter x Inner diameter x Length
T-6×4-5	Polyamide 6	6mm×4mm×5m
T-6×4-10		6mm×4mm×10m

Tube connector TCS/TCR

A tube connector with hex socket with high fluidity and sealing characteristics provided by the O-ring.

Straight Type

- TCS-M6
- TCS-G1/8

Right Angle Type

- TCR-M6
- TCR-G1/8

Specifications	
Material	CW614N (brass)
Surface treatment	Nickel plated
Operating pressure	Up to 80 bar
Operating temperature	-30 to 100°C

Note: Catalog codes M6 and G1/8 are the screw sizes. Please select according to the mounting shaft.

PUS/PUSCP lubricated spur gear

Module 1.5~6 Circular pitch 5, 10

M *Lubrication Spur Gears*

Specifications	
Gear teeth	Standard full depth
Pressure angle	20°
Material	Polyurethane foam

[Application Hints] ① Can be used in temperatures from -30 to 150 °C.
② Setting is possible to either a rack or a pinion, but we recommend a pinion as it can provide proper lubrication.
③ Avoid operations with high load until grease is applied to the gear teeth of the rack gears and pinion gears.

KHK Environmental Practices

All KHK stock gears conform to the RoHS2[*1] Directive.

*1 The RoHS2 Directive (2011/65/EU) was revised on July 22, 2019 to a total of 10 substances with 4 phthalates added.

RoHS2 Directive

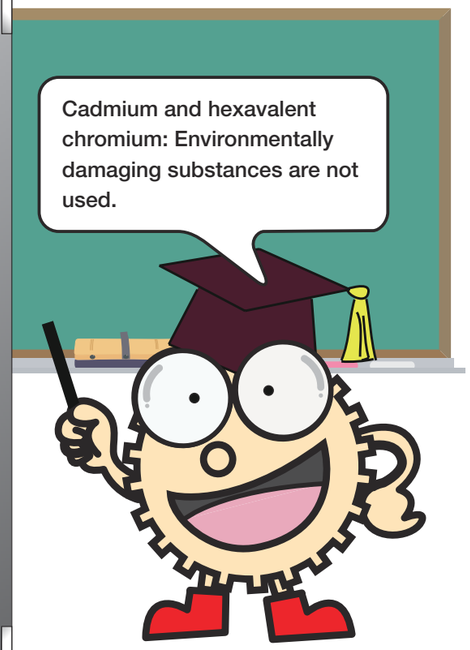
Restriction of Hazardous Substances

Restriction of Hazardous Substances

The RoHS Directive is a law established by the European Union (EU) that restricts the use of certain hazardous substances in electronic and electrical equipment. The use of the 10 environment-related substances specified below is restricted.

Maximum allowable concentration of 10 environment-related substances

- Cadmium: 0.01wt% (100ppm)
- Lead: 0.1 wt% (1000ppm)
  *Exception depending on usage
  Steel 0.35 wt%, Aluminum 0.4 wt%, Copper alloy 4 wt%
- Mercury: 0.1 wt% (1000ppm)
- Hexavalent chromium: 0.1 wt% (1000ppm)
- PBB (Polybrominated biphenyl): 0.1 wt% (1000ppm)
- PBDE (Polybrominated diphenyl ether): 0.1 wt% (1000ppm)
- DEHP (Di-2-EthylHexyl Phthalate): 0.1 wt% (1000 ppm)
- BBP (Butyl Benzyl Phthalate): 0.1 wt% (1000 ppm)
- DBP (DiButyl Phthalate): 0.1 wt% (1000 ppm)
- DIBP (DiIsoButyl Phthalate): 0.1 wt% (1000 ppm)



SDGs

SDGs Initiatives

KHK is working to contribute to the realization of the SDGs.

KHK Environmental Practices

Treatment after use of KHK stock gears and packaging materials

■ Steel Products

Recycle metal products as scrap metal according to the material.

■ Nylon Gears

Nylon gears are plastic waste. Please dispose of as reusable industrial waste.

■ Cardboards

Treat the cardboard used in the packaging as recycled cardboard.

■ Paperboards

Treat the cardboard used in the packaging as recycled paper.

■ Plastics

Packing materials like foamed polyethylene sheets and plastic boxes are plastic waste. Please dispose of as reusable industrial waste.

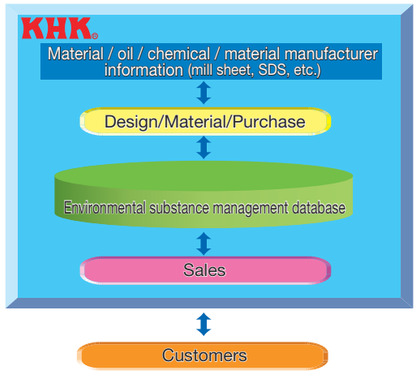
SDS Activities

The materials and products used for KHK stock gears, the rust preventive oil and packaging materials, and the auxiliary materials used in the manufacturing process are managed in the safety data sheet for chemical substances, etc., in consideration of the global environment.

Green Purchasing Activities

90 percent of office supplies we purchase are made of environmentally friendly materials.

The material components of KHK stock gears are managed in a database.



We have created a database of materials used in KHK stock gears, black dye, rust preventive oil used in products, mill sheets and SDS for packaging materials in effort to create environmentally friendly products.

* The mill sheet is an attached document that guarantees the steel material.
* SDS refers to safety data sheets.

Improving environmental (quality, safety, cost) aspects through design, manufacturing and sales activities of KHK stock gears

■ Press ahead with employing “dry-cut” gear cutting methods.

Results

Preventing air pollution due to oil smoke, not using cutting oil (resource-saving), shortening machining time by high-speed gear cutting (saves energy, shortens manufacturing lead time)

■ Adiabatic films covering windows and adiabatic paint applied on the roof of our building

Results

It blocks heat from the outside during summer and insulates heat inside during winter, reducing the amount of electricity used by the air conditioner.

■ The choice of hybrid cars and idling stop cars

Results

We are working to reduce the environmental burden by using hybrid and idling-stop vehicles.

■ Solar panels placed on the roof of our building (10kW-Rated)

Results

60 solar panels on the roof reduced 1.89 tons of CO_2 emission per year. CO_2 emissions are known to be contributors to global warming.

ISO14001 environmental management system certification acquired

KHK has established an integrated management system not only to provide quality assurance to our customers but also to conduct environmentally conscious corporate activities and continuous improvement activities that involve all our employees in order to increase stakeholder satisfaction, as well as to establish and promote a system that provides highly economic results.

CERTIFIED MANAGEMENT SYSTEM JQA
ISO 9001
ISO 14001
JQA-QMA14416
JQA-EM6717

At KHK, we strive to fulfill our motto “to provide quality products that are trusted by customers,” acquiring the international standard quality management system ISO9001 certification and the environmental management system ISO14001 certification. Also, in order to increase customer satisfaction, we have established an integrated management system of “Vision, Plan, Do, Check and Action” cycles to continuously improve the work structure and offer safer and better products speedily and cheaply. We also work hard to further improve our service so that our customers can use KHK products with peace of mind.

Discontinued Stock Product Model Number History Table

Category	Discontinued Products		Specifications		Alternative	Sales Period
	Item	Range	Characteristics	Material	Item	
Spur Gears	**MSGA/MSGB**	Module 1, 1.5, 2, 2.5, 3, 4	Carburized	SCM415	Custom order	1978~2022
	SSG	Some products of module 0.5, 0.8	Finished	S45C	Custom/Made to Order	2008~2022
	SSS	Module 0.5, 0.8, 2, 2.5, 3	Shaft Type	S45C	Custom order	2008~2020
	SS	Some products of module 0.5, 0.8, 1, 1.5	Finished	S45C	Made to Order / Secondary Operations	2008~2020
	SSY	Some products of module 0.8, 1, 1.25	With Hub	S45C	Custom order	1984~2020
	SSAY	Module 1.25	Hubless	S45C	Custom order	1988~2008
	SSAY/K	All	K clamp (patented)	S45C	No production	2002~2017
	SSH	All	Honing treatment on Tooth Surface	S45C	**SSG**	1973~1975
	LS	m0.5-25,40 m0.8-25,40,60,70,80	Sintered item	SMF5040	**SS**	2000~2014
	CS	All	Molded	FC200	**SS**	1973~1984
	SUSL	All	F-loc	SUS303	**SUSF**	1996~2016
	DSL	All	F-loc	Acetal (SUS303)	**DSF**	2000~2016
	SUSF	Module 0.5, 1	F-loc	SUS303	Custom order	2016~2022
	DSF	Module 0.5, 1	F-loc	Polyacetal (SUS303)	Custom order	2016~2022
	NSU	Some products of module 1,1.5, 2, 2.5, 3	With core hub	MC602ST (S45C)	Custom order	1988~2022
	PSU	All	With core hub	MC901 (FC200)	**PU**	1988~1996
	DS	Some products of module 0.5, 0.8, 1	Molded item	Duracon (R) (M90-44)	Custom order	1988~2022
	BSS	Some products of module 0.5, 0.8, 1	Finished	C3604	Made to Order / Secondary Operations	2008~2020
	MSCPG	All	Carburized	SCM415	Made to Order	2014~2020
	KSCP	All	Thermal refined, gear teeth induction hardened	SCM440	**KSSCP** Hardened Plus	2014~2019
Helical Gears	**KHCPG**	All	CP, Ground	SCM440	Custom order	1992~1992
	KHG	Some products of module 1,1.5, 2, 2.5, 3	Transverse modules, ground gears	SCM440	Custom order	1989~2022
Internal Ring Gears	**CI**	All	Molded	FCD55	**SI**	1973~1978
Racks	**KRG**	All 500mm	Thermal Refined, Ground	SCM440	**KRGF**	1984~2020
	KRGD	All	Thermal Refined, Ground	SCM440	**KRGFD-HJ**	1984~2019
	SR	Lengths over 1000 mm	Common Type	S45C	**SRF**	1973~2008
	SRG/SRGF	Module 0.5, 0.8	Gear teeth induction hardened	S45C	Made to Order	2008~2022
	SUR	Lengths over 1000 mm	Stainless Steel	SUS304	**SURF**	2004~2020
	PR	Lengths over 1000 mm	Plastic	MC901	**PRF**	1984~2020
	BSR	Module 1.25	Contains Brass	C3604	Custom order	1984~2008
	SRO	SRO6-1000	Round Racks	S45C	Custom order	1989~2019
	CR	All	Molded	FC200	**SRF**	1973~1978
	KRGCP	All 500mm	Thermal Refined, Ground	SCM440	**KRGCPF**	1986~2020
	KRGCPD	All	CP, Thermal Refined, Ground	SCM440	**KRGCPFD-HJ**	1984~2019
	SRCP	Lengths over 1000 mm	CP	S45C	**SRCPF**	1978~2008
Helical Racks	**KRHG**	Some products of module 2, 2.5, 3	Thermal Refined, Ground	SCM440	Custom order	1992~2022
	KRHGCPF	All	CP, Ground	SCM440	Custom order	1992~1992
Spiral Miter Gears	**SMS**	Module 1.25	Common Type	S45C	Custom order	1978~2006
	KSP	F Type (Finished Products with Key Groove) All Products, Parts of m1.5 to 6	Finished	SCM415	Made to Order / Secondary Operations	2004~2022
Straight Miter Gears	**CM**	All	Molded	FC20	**SM**	1973~1978
	FM	All	Precision Molded	S45C	**SM**	1973~1978
	SMA/B/C	Some products of module 3.5, 6, 8	Finished	S45C	Custom order	1973~2022
Ground Zerol Miter Gears	**SMZG**	All	Thermal refined, gear teeth induction hardened	S45C	Custom order	2010~2020
High-Ratio Hypoid Gears	**MHP**	Reduction ratios 90, 120, 180, 200, 20 (m1), 30 (m1.5)	High reduction ratio with a pair of gears	SCM415	No production	2000~2016
Spiral Bevel Gears	**MBSA**	Some products of module 1.5 or less, 2, 2.5, 3, 4, 5, 6	Finished	SCM415	Custom order	1978~2020
	MBSB	Some products of module 1.5 or less, 2, 2.5, 3, 4, 5, 6	Finished	SCM415	Custom order	1978~2020
	KSP	F Type (Finished Products with Key Groove) All Products, Parts of m1.5 to 6	Finished	SCM415	Custom order	2004~2022
Straight Bevel Gears	**FB**	All	Precision Molded	S45C	**SB**	1973~1978
	SB	CB gear mating pinions with module over m5	Common Type	S45C	**SBY**	1973~2006
	CB	All items having SB	Molded	FC200	**SB**, **SBY**	1973~2000
	CB	SB mating gears with module over m5	Molded	FC200	**SB**, **SBY**	1973~2006
Ground Zerol Bevel Gears	**SBZG**	All	High reduction ratio with a pair of gears	S45C	Custom order	2010~2020
Screw Gears	**AN**	Module 2.5, 3,4	Contains Aluminum Bronze	CAC702 (AlBC2)	Made to Order	1979~2022
Worms	**KWGDL**	Module Over 5	Duplex, Ground	SCM440	Custom order	1988~2002
	KWGDLS	Module Over 5	Duplex, Ground Shaft	SCM440	Custom order	1992~2002
	KWG	Right-hand helix with double threads with module over m5 (R2)	Ground Shaft	SCM440	Custom order	1978~2002
	SW	Left-hand helix with module over m4 (L1, L2)	Common Type	S45C	Custom order	1996~2002 m4 is 1996~2019
Worm Wheels	**AG**	Module 3, 4	Contains Aluminum Bronze	CAC702 (AlBC2)	Custom order	1973~2022
	AGDL	Module Over 3.5	Duplex	CAC702 (AlBC2)	Custom order	1988~2022
	AGF	Module Over 2	Contains Aluminum Bronze	CAC702 (AlBC2)	Custom order	1978~2022
	BG	Left-hand helix with module over m4 (L1, L2)	Contains Phosphor Bronze	CAC502 (PBC2)	Custom order	1996~2002 m4 is 1996~2019
	CG	Module Over 1.5	Molded	FC200	Custom order	1996~2020 m4 is 1996~2019
	DG	Module 0.5, 0.8	Polyacetal	Polyacetal	Custom order	2008~2022
Gearboxes	**PBX**	All	Bevel Gearboxes	—	No production	2004~2022
Other Products	**SRTB**	Some products of modules 2/3~4	Gear teeth induction hardened	S45C	Made to Order	1992~2022
	GC	All TK	Gear Couplings	S45C	**GC-J**	1975~2020
One-cycle-clutch type geared motor	**F**	All	Without motor		No production	1973~1980
	IM	All	With motor		No production	1973~1980
	M	All	With motor		No production	1973~1980
Gear calculation software	**GCSW**	All	General gear calculation		Online GCSW	1988~2009
Electronic catalog (Japanese version only)	**30**XX	All	Product information for KHK stock gears DXF, strength calculation, etc.		Web Catalog	1992~2011

Customer Trust and Satisfaction

KHK STOCK GEARS®
